**Data Layer Specifications for:
Archaeological Site**

**United States Air Force
Environmental GIS Program**

Revision History

| Date: | Version: | Description of Revision: |
|------------|-----------------------------|--|
| 12/12/2016 | ArchaeologicalSite_20161212 | <ul style="list-style-type: none"> Removed “the vertical datum shall be Mean Sea Level (MSL_Height),” from the Coordinate System section. |
| 10/4/2016 | ArchaeologicalSite_20161004 | <ul style="list-style-type: none"> Updated feature class codes used for creating Resource ID when MCRAD data is not present. |
| 6/23/2016 | ArchaeologicalSite_20160623 | <ul style="list-style-type: none"> Added ArchaeologicalSite_P representation under “Data Layer Details” section. Updated “Positional Accuracy” section. |
| 3/10/2017 | ArchaeologicalSite_20170310 | <ul style="list-style-type: none"> Updated all Air Force Standard attribute fields to match August 6, 2015 GeoBase Data Dictionary. Updated “Positional Accuracy” section. Updated “For Empty Text Values” subsection. Updated the “Representation” subsection of the “Data Layer Details” section. Updated the “Point Features” subsection of the “Geometry/Topology” section. |
| 6/8/2017 | ArchaeologicalSite_20170608 | <ul style="list-style-type: none"> Updated the data layer update frequency in the “Sources and Source Selection” section. Updated “Data Steward POC” |
| 03/01/2018 | ArchaeologicalSite_20180301 | <ul style="list-style-type: none"> Updated the “Definition”, “Geometry/Topology”, “Positional Accuracy”, “Attributes”, “Business Tables,” and “Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Attribute Domain Tables” sections. |

Data Layer Specification – Archaeological Site

This Data Layer Specification (DLS) defines geospatial data specifications for the ArchaeologicalSite_A, ArchaeologicalSite_L, and ArchaeologicalSite_P data layers implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

The location of a recorded archaeological site.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | ArchaeologicalSite_A ArchaeologicalSite_L ArchaeologicalSite_P |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalCulturalResources |
| Previous Layer Names: | marine_archeological_area milling_area rockart_area terrest_archeological_area archeological_artifact_point cliff_dwelling_point marine_archeological_point milling_point rockart_point terrest_archeological_point ArchaeologicalSite |
| Geometry Type: | Polygon, Line, Point |
| Data Steward Organization (Program Area): | Program Area: Cultural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Cultural Resources Program SME |
| Representation: | <ul style="list-style-type: none">• All archaeological site locations shall represent the latitude, longitude location of an identified site.• Archaeological site areas are represented as closed polygons depicting the outermost extent of the area.• Each individual archaeological site area is represented by a single area feature.• Archaeological sites will be represented as a continuous unbroken line.• All points developed from areas shall represent the centroid of archaeological site area. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|--------------------------|---|
| HQ AF/A7CAN | <ul style="list-style-type: none"> • AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007 • AFI32-7062, Comprehensive Planning, 27 June 2013 • AFI32-7064, Integrated Natural Resources Management, 18 November 2014 • AFI32-7065, Cultural Resources Management Program, 19 November 2014 • AFH32-9007, Managing Air Force Real Property, 1 May 1999 • AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 • Archeological Resources Protection Act (ARPA), 1979 |

Geometry/Topology

| |
|--|
| Polygon Features: |
| Polygons must not overlap. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |
| Line Features: |
| Lines must not self-overlap. |
| Lines must not self-intersect. |
| Lines must be single part features. |
| Lines must be larger than cluster tolerance (.001 meter). |
| Point Features: |
| Points must be disjoint. |
| If a point represents a polygon feature, then the point must fall properly inside of the coinciding polygon. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual

(every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Military Cultural Resources Analysis Database (MCRAD) is a relational data model that uses the functionality of Microsoft Access. It was created by Dr. Paul Green in collaboration with Dr. Brian Crane to resolve the issues that arise due to idiosyncratic formats of cultural resource data. MCRAD has been refined to support cultural resource business practices with DoD-wide input and has been adopted by the Deputy Under Secretary of Defense for Installations and Environment as a cultural resources geodata standard. MCRAD, if being used, should only be used to populate the business tables.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west-most spatial extents of the ArchaeologicalSite_A, ArchaeologicalSite_L, and ArchaeologicalSite_P layers will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the ArchaeologicalSite_A, ArchaeologicalSite_L, and ArchaeologicalSite_P data layers.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|--|--------------------|----------|
| | archaeologicalSiteIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Archaeological Site. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Archaeological Site that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize (<i>Polygon geometry</i>) | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM (<i>Polygon geometry</i>) | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize (<i>Polygon geometry</i>) | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM (<i>Polygon geometry</i>) | The perimeter unit of measure. | foot | String (25) | AF |

Data Layer Specification – Archaeological Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--|--|-----------------------------------|--------------------|----------|
| | latitude <i>(Polygon geometry)</i> | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude <i>(Polygon geometry)</i> | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid <i>(Polygon Feature)</i> | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | lengthSize <i>(Line geometry)</i> | The value of the measured length. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | lengthSizeUOM <i>(Line geometry)</i> | The unit of measure for the calculated length. | foot | String (25) | AF |
| | latitudeFrom <i>(Line geometry)</i> | The latitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | latitudeTo <i>(Line geometry)</i> | The latitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |

Data Layer Specification – Archaeological Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|-----------------|--------------------|----------|
| | longitudeFrom <i>(Line geometry)</i> | The longitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeTo <i>(Line geometry)</i> | The longitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | elevationFrom <i>(Line geometry)</i> | The elevation component of the beginning (upstream/upgradient) coordinate point in feet. | | Double | AF |
| | elevationTo <i>(Line geometry)</i> | The elevation component of the ending (downstream/downgradient) coordinate point in feet. | | Double | AF |
| D | elevationUOM <i>(Line geometry)</i> | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | latitude <i>(Point geometry)</i> | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude <i>(Point geometry)</i> | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |

Data Layer Specification – Archaeological Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------------------------|---|---|--------------------|----------|
| | MGRS (Point Feature) | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation (Point geometry) | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM (Point geometry) | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | resourceID | Represents the Primary Key (ResourceID) for the feature in the MCRAD database. If the Resource_ID does not currently exist in MCRAD, use a concatenation of the installation siteID, the FDS code (CR), and the feature class code (YYYY) followed by a unique sequential six digit number (example: XXXX0001CRYYYY000001) to develop a unique identifier. This value is used to link to the feature class business table. See feature class Data Layer Specifications for applicable feature class code. | Feature Class Codes for Archaeological Site: Area – “ARCA” Line – “ARCL” Point – “ARCP”. | String (50) | AF |

Data Layer Specification – Archaeological Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------------|--|--|--------------------|----------|
| D | nationalRegisterStatus | Specifies the historic status of a cultural resource feature with respect to placement on the National Register of Historic Places. Categorizes the feature as one of the Real Property Asset (RPA) Historic Status Code values as defined by the DUSD landE RPIR. | For a list of domain values, see HistoricStatusCode in Appendix 1. | String (5) | SDSFIE |
| | otherRegisterStatus | Specifies placement on the World Heritage List, or a cultural property inventory/registry of the host nation. | Status of site on any additional inventory, registry or list. | String (150) | SDSFIE |
| | siteFunction | A description of the function(s) of the site. | | String (255) | AF |
| | lastInspectionDate | The date of the last inspection of the feature. Format for date is YYYYMMDD (i.e. September 15, 1994 = 19940915). MCRAD Register table. | | Integer (Long) | AF |
| | inspectionNotes | Any notes regarding the last inspection. | | String (255) | AF |
| | gisDataSource | The data source of the feature. | | String (255) | AF |
| | gisDataReliability | The reliability of the GIS data. | | String (255) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |

Data Layer Specification – Archaeological Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|---|--------------------|----------|
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |

Data Layer Specification – Archaeological Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business tables will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. The business tables for ArchaeologicalSite_A, ArchaeologicalSite_L, and ArchaeologicalSite_P are:

| Table Name | Identifier | Source |
|-------------------------|------------|----------------|
| cr_ArchaeologicalSite_A | ResourceID | MCRAD database |
| cr_ArchaeologicalSite_L | ResourceID | MCRAD database |
| cr_ArchaeologicalSite_P | ResourceID | MCRAD database |

Business Table Attributes for cr_ArchaeologicalSite_A, cr_ArchaeologicalSite_L, and cr_ArchaeologicalSite_P

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|--|---|--------------------|
| | ResourceID | Primary Key in MCRAD Resources table. Used to link this business table to the appropriate feature class. | MCRAD Resources table | String (50) |
| | Res_Num | Smithsonian trinomial or equivalent. MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Res_Name | Site name recognized by agency. MCRAD Resources table. | MCRAD Resources table | String (100) |
| | Res_Grp | Type of resource (single, district, route, other aggregate groupings, etc.). MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Res_Type | Archaeological site, building, structure, object, etc. MCRAD Resources table. | MCRAD Resources table | String (155) |
| | Res_Desc | Short description of resource. MCRAD Resources table. | MCRAD Resources table | String (255) |
| | Condition | Overall condition, nature of disturbances, etc. MCRAD Resources table. | MCRAD Resources table | String (255) |
| D | Disturb | The percentage of the site that has been disturbed. MCRAD Resources table. | MCRAD Resources table For a list of domain values, see Disturbance in Appendix 1. | String (10) |
| | Disturb_Source | Describes the source of the disturbance. MCRAD Resources table. | MCRAD Resources table | String (250) |

Data Layer Specification – Archaeological Site

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|------------------|--|---|--------------------|
| D | Threatened | Indicates whether resource is threatened. MCRAD Resources table. | MCRAD Resources table NA, no, TBD, yes | String (3) |
| | Threats | Describes the nature of threats to resource. MCRAD Resources table. | MCRAD Resources table | String (255) |
| D | Res_Status | Research status: Evaluated? Excavated? MCRAD Resources table. | MCRAD Resources table For a list of domain values, see SiteStatus in Appendix 1. | String (15) |
| | Drainage | River drainage where resource is located. MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Physio_Prov | Name of physiographic province. MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Size_Notes | Any notes regarding the size of the feature. MCRAD Resources table. | MCRAD Resources table | String (255) |
| | Occ_Start | The occupation start year. MCRAD Resources table. | MCRAD Resources table | Double |
| | Occ_End | The occupation end year. MCRAD Resources table. | MCRAD Resources table | Double |
| D | Date_Meth | Method used to determine date. MCRAD Resources table. | MCRAD Resources table For a list of domain values, see DateMethod in Appendix 1. | String (20) |
| | Fac_Num | Air Force building or facility number (for historic buildings/structures on base property). MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Deposition | Deposition: such as Buri, Surf, or both. MCRAD Resources table. | MCRAD Resources table | String (50) |
| D | Artifact_Density | Density of artifacts within the area. MCRAD Resources table. | MCRAD Resources table For a list of domain values, see ArtifactDensity in Appendix 1. | String (25) |
| | Rec_Date | Date resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |

Data Layer Specification – Archaeological Site

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|---|---|--------------------|
| | Rec_Month | Month resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Rec_Day | Day resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Rec_Year | Year resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Register_Name | Identifies the name of the register (e.g. World Heritage, Host Nation Register). MCRAD Register table. | MCRAD Register table | String (50) |
| | Op_Source | Source of opinion (Consultant, Agency). MCRAD Register table. | MCRAD Register table | String (50) |
| | Signif_Level | Significance level: International, National, Provincial, Local. MCRAD Register table. | MCRAD Register table / International, National, Provincial, Local | String (50) |
| | A | NRHP Criterion A. MCRAD Register table. | MCRAD Register table | String (3) |
| | B | NRHP Criterion B. MCRAD Register table. | MCRAD Register table | String (3) |
| | C | NRHP Criterion C. MCRAD Register table. | MCRAD Register table | String (3) |
| | D | NRHP Criterion D. MCRAD Register table. | MCRAD Register table | String (3) |
| | CritConsid | Describes the NRHP criteria considerations (Less than 50 years of age, Church, Relocated, etc). MCRAD Register table. | MCRAD Register table | String (255) |
| | I1 | Integrity of location. MRCAD Register table. | MCRAD Register table | String (50) |
| | I2 | Integrity of design. MRCAD Register table. | MCRAD Register table | String (50) |
| | I3 | Integrity of setting. MRCAD Register table. | MCRAD Register table | String (50) |
| | I4 | Integrity of materials. MRCAD Register table. | MCRAD Register table | String (50) |

Data Layer Specification – Archaeological Site

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|---|---|--------------------|
| | I5 | Integrity of workmanship. MRCAD Register table. | MCRAD Register table | String (50) |
| | I6 | Integrity of feeling. MRCAD Register table. | MCRAD Register table | String (50) |
| | I7 | Integrity of association. MRCAD Register table. | MCRAD Register table | String (50) |
| | Sig_Per | The period of significance. MRCAD Register table. | MCRAD Register table | String (50) |
| | Themes | Applicable National Register themes. MRCAD Register table. | MCRAD Register table | String (255) |
| | Sensitivity | The potential effects (i.e. Sensitive to visual effects, Excavation, etc). MRCAD Register table. | MCRAD Register table | String (50) |
| | Date_Notes | Notes on the date for the NR opinion. MRCAD Register table. | MCRAD Register table | String (255) |
| | Recon_Year | The year the opinion needs to be reconsidered, such as when a property reaches 50 years of age. MRCAD Register table. | MCRAD Register table | Integer (Long) |
| | Opinion_Status | The status of the opinion, such as Official-Current, Official-Not Current, Unofficial, Advisory. MRCAD Register table. | MCRAD Register table / Official-Current, Official-Not Current, Unofficial, Advisory | String (50) |
| | Opinion_Date | The date in which NRHP status opinion was rendered. Format for date is YYYYMMDD (i.e. September 15, 1994 = 19940915). MRCAD Register table. | MCRAD Register table | Integer (Long) |
| | Notes | Notes. MCRAD Resources and Register tables. | MCRAD Register table | String (255) |
| | Artifact_Desc | A description of the artifacts. MCRAD Diagnostics table. | MCRAD Diagnostics table | String (255) |

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|---|------------------------------|--------------------|
| | Human_Remains | Indicates the presence of human remains in the collection. MCRAD Diagnostics table. | MCRAD Diagnostics table | String (50) |
| | Unass_Fun_Rem | Indicates the presence of unassociated funerary remains. | | String (50) |
| | Assoc_Fun_Rem | Indicates the presence of associated funerary remains. | | String (50) |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Cultural Resources, Archaeological Site

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: ArtifactDensity | |
|------------------------------------|--|
| ATTRIBUTE NAME: Artifact_Density | |
| CODED DOMAIN | DEFINITION |
| none | There were not any artifacts found at this site. |
| low1 | Artifact density is low at 1. Based on a density range between 1-10. |
| moderate2-5 | Artifact density range is moderate between 2-5. Based on a density range between 1-10. |
| high6-10 | Artifact density range is high between 6-10. Based on a density range between 1-10. |
| veryHigh10 | Artifact density is very high at greater than 10. Based on a density range between 1-10. |
| veryLow10 | Artifact density is very low at 1 - 10. Based on a density range between 1-1000. |
| low11-24 | Artifact density range is low between 11-24. Based on a density range between 1-1000. |
| moderate25-100 | Artifact density range is moderate between 25-100. Based on a density range between 1-1000. |
| high101-1000 | Artifact density range is high between 101-1000. Based on a density range between 1-1000. |
| veryHigh1000 | Artifact density is very high at greater than 1000. Based on a density range between 1-1000. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The artifact density of this location is unknown. |

| DOMAIN TABLE NAME: DateMethod | |
|-------------------------------|---|
| ATTRIBUTE NAME: Date_Meth | |
| CODED DOMAIN | DEFINITION |
| archaeomagnetic | Date method type is archaeomagnetic. |
| bioluminescence | Date method type is bioluminescence. |
| biosilicates | Date method type is biosilicates. |
| c14 | Date method type is C-14 radioactive. |
| ceramicDating | Date method type is ceramic dating. |
| chronometric | Date method type is absolute/chronometric. |
| NA | Not Applicable: No value exists. |
| none | A date method type was not used. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| projectilePt | The date method type is projectile point technique inference. |
| relative | The date method type is relative. |
| researchExp | The date method type is research/experience. |
| seriation | The date method type is seriation. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| thermolumin | The date method type is thermoluminescence. |
| treeRing | The date method type is tree ring. |

| DOMAIN TABLE NAME: Disturbance | |
|--------------------------------|---|
| ATTRIBUTE NAME: Disturb | |
| CODED DOMAIN | DEFINITION |
| destroyed | The feature has been destroyed. |
| majorImp | The feature has experienced major impact with 51-99% disturbed. |
| minorImp | The feature has experienced minor impact with 1-25% disturbed. |

Data Layer Specification – Archaeological Site

| DOMAIN TABLE NAME: Disturbance | |
|--------------------------------|---|
| ATTRIBUTE NAME: Disturb | |
| modimp | The feature has experienced moderate impact with 26-50% disturbed. |
| NA | Not Applicable: No value exists. |
| none | No disturbance has impacted the feature. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The disturbance level of the feature is unknown. |

| DOMAIN TABLE NAME: HistoricStatusCode | |
|--|--|
| ATTRIBUTE NAME: nationalRegisterStatus | |
| CODED DOMAIN | DEFINITION |
| DNE | Determined Not Eligible for Listing: An asset that has been evaluated using the National Register of Historic Places (NRHP) criteria and is determined not to meet the criteria of eligibility. |
| DNR | Designation Rescinded for NHLI/NHLC/NREI/NREC National Register Property: Determined by the Keeper of the National Register of Historic Places (NRHP) to no longer meet the criteria for listing in the NRHP. |
| ELPA | Eligible for the Purposes of a Program Alternative: An asset that is included within the scope of a program alternative developed and implemented pursuant to 36 CFR 800.14, Protection of Historic Properties. |
| NA | Not Applicable: No value exists. |
| NAR | Not Assessed Routinely: An asset that is not routinely planned to be evaluated for National Register of Historic Places (NRHP) eligibility. |
| NCE | Non-Contributing Element of NHL/NRL/NRE District: Assets within the designated boundaries of a National Historic Landmark (NHL) or National Register of Historic Places (NRHP) listed or eligible property that have been evaluated and determined not to contribute to the historic significance of the property. |
| NEV | Not Yet Evaluated: An asset that has not been evaluated for National Register of Historic Places (NRHP) eligibility. |
| NHLC | Contributing Element of a NHL District: An asset that is identified as a contributing element of a larger property listed in the National Register of Historic Places (NRHP) and also designated a National Historic Landmark (NHL) by the Secretary of Interior. |
| NHLI | Individual National Historic Landmark: An asset that is individually listed in the National Register of Historic Places (NRHP) and also designated as a National Historic Landmark (NHL) by the Secretary of Interior. |
| NREC | Contributing Element of NRE District: An asset that is identified as a contributing element of a larger property or district determined eligible for inclusion in the National Register of Historic Places (NRHP). |
| NREI | Individual National Register Eligible: An individual asset that is determined to meet the National Register of Historic Places (NRHP) criteria of eligibility. |
| NRLC | Contributing Element of NRL District: An asset that is identified as a contributing element of a historic property listed in the National Register of Historic Places (NRHP). |
| NRLI | Individual National Register Listed: An individual asset that has been listed in the National Register of Historic Places (NRHP). |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

Data Layer Specification – Archaeological Site

| DOMAIN TABLE NAME: SiteStatus | |
|-------------------------------|---|
| ATTRIBUTE NAME: Res_Status | |
| CODED DOMAIN | DEFINITION |
| collection | Items have been collected from the site. |
| evaluated | The site has been evaluated. |
| excavated | The site has been excavated. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| partMitigate | The site is in partial mitigation. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| tested | The site has been tested. |
| undisturbed | The site is undisturbed (Surveyed - No Collections). |
| unknown | The site status is unknown. |

**Data Layer Specifications for:
Cemetery or Burial Site**

**United States Air Force
Environmental GIS Program**

Revision History

| Date: | Version: | Description of Revision: |
|------------|-------------------------------|--|
| 12/12/2016 | CemeteryOrBurialSite_20161212 | <ul style="list-style-type: none"> Removed “the vertical datum shall be Mean Sea Level (MSL_Height),” from the Coordinate System section. |
| 10/4/2016 | CemeteryOrBurialSite_20161004 | <ul style="list-style-type: none"> Updated feature class codes used for creating Resource ID when MCRAD data is not present. |
| 6/23/2016 | CemeteryOrBurialSite_20160623 | <ul style="list-style-type: none"> Updated CemeteryOrBurialSite_P representation under “Data Layer Details” section. Updated “Positional Accuracy” section. |
| 3/10/2017 | CemeteryOrBurialSite_20170310 | <ul style="list-style-type: none"> Updated all Air Force Standard attribute fields to match August 6, 2015 GeoBase Data Dictionary. Updated “Positional Accuracy” section. Updated “For Empty Text Values” subsection. Updated the “Representation” subsection of the “Data Layer Details” section. Updated the “Point Features” subsection of the “Geometry/Topology” section. |
| 6/8/2017 | CemeteryOrBurialSite_20170608 | <ul style="list-style-type: none"> Updated the data layer update frequency in the “Sources and Source Selection” section. Updated “Data Steward POC” |
| 03/01/2018 | CemeteryOrBurialSite_20180301 | <ul style="list-style-type: none"> Updated the “Definition”, “Geometry/Topology”, “Positional Accuracy”, “Attributes”, “Business Tables,” and “Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Attribute Domain Tables” sections. |

This Data Layer Specification (DLS) defines geospatial data specifications for the CemeteryOrBurialSite_A and CemeteryOrBurialSite_P data layers implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

A place or ground set apart for human burial. Can contain an area representing a graveyard, or a point feature containing one or more graves.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | CemeteryOrBurialSite_A CemeteryOrBurialSite_P |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalCulturalResources |
| Previous Layer Names: | animal_graveyard_area cemetery_area grave_point animal_graveyard_point cemetery_point CemeteryOrBurialSite |
| Geometry Type: | Polygon, Point |
| Data Steward Organization (Program Area): | Program Area: Cultural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Cultural Resources Program SME |
| Representation: | <ul style="list-style-type: none"> • Cemetery or burial areas are represented as closed polygons depicting the outermost extent of a known burial site, graveyard or cemetery. • Each individual cemetery or burial area is represented by a single area feature. • A cemetery or burial point developed from an area will represent the centroid of a known burial site, grave, graveyard or cemetery. |

Implementing Authorities and Regulations

| | |
|---------------------------------|---|
| Implementing Program(s): | Driver(s): |
| HQ AF/A7CAN | <ul style="list-style-type: none"> • AF134-242, Mortuary Affairs Program, 2 April 2008 |

| Implementing Program(s): | Driver(s): |
|--------------------------|--|
| | <ul style="list-style-type: none"> • AFPAM 34-505, Mortuary Services Benefits for Retired Air Force Members, 15 April 2011 • AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007 • AFI32-7062, Comprehensive Planning, 27 June 2013 • AFI32-7064, Integrated Natural Resources Management, 18 November 2014 • AFI32-7065, Cultural Resources Management Program, 19 November 2014 • AFH32-9007, Managing Air Force Real Property, 1 May 1999 • AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 • 43 CFR 10.2 (d) (2) Burial Site |

Geometry/Topology

| |
|--|
| Polygon Features: |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |
| Point Features: |
| If a point represents a polygon feature, then the point must fall properly inside of the coinciding polygon. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Military Cultural Resources Analysis Database (MCRAD) is a relational data model that uses the functionality of Microsoft Access. It was created by Dr. Paul Green in collaboration with Dr. Brian Crane to resolve the issues that arise due to idiosyncratic formats of cultural resource data. MCRAD has been refined to support cultural resource business practices with DoD-wide input and has been adopted by the Deputy Under Secretary of Defense for Installations and Environment as a cultural

resources geodata standard. MCRAD, if being used, should only be used to populate the business tables.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the CemeteryOrBurialSite_A and CemeteryOrBurialSite_P layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), the vertical datum shall be Mean Sea Level (MSL, Height), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the CemeteryOrBurialSite_A and CemeteryOrBurialSite_P data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--|--|--|--------------------|----------|
| | cemeteryOrBurialSiteIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Cemetery or Burial Site. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Cemetery or Burial Site that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize (Polygon geometry) | | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM (Polygon geometry) | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize (Polygon geometry) | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM (Polygon geometry) | The perimeter unit of measure. | foot | String (25) | AF |

Data Layer Specification – Cemetery or Burial Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|-----------------|--------------------|----------|
| | latitude <i>(Polygon geometry)</i> | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude <i>(Polygon geometry)</i> | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid <i>(Polygon geometry)</i> | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | |
| | latitude <i>(Point geometry)</i> | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude <i>(Point geometry)</i> | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | MGRS <i>(Point geometry)</i> | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation <i>(Point geometry)</i> | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM <i>(Point geometry)</i> | The unit of measure for elevation dimension. | foot | String (25) | AF |

Data Layer Specification – Cemetery or Burial Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------------|--|---|--------------------|----------|
| | resourceID | <p>Represents the Primary Key (ResourceID) for the feature in the MCRAD database. If the Resource_ID does not currently exist in MCRAD, use a concatenation of the installation siteID, the FDS code (CR), and the feature class code (YYYY) followed by a unique sequential six digit number (example: XXXX0001CRYYYY000001) to develop a unique identifier. This value is used to link to the feature class business table. See feature class Data Layer Specifications for applicable feature class code.</p> | <p>Feature Class Codes for Cemetery or Burial Site: Area – “CBSA” Point – “CBSP”.</p> | String (50) | AF |
| D | nationalRegisterStatus | <p>Specifies the historic status of a cultural resource feature with respect to placement on the National Register of Historic Places. Categorizes the feature as one of the Real Property Asset (RPA) Historic Status Code values as defined by the DUSD landE RPIR.</p> | <p>For a list of domain values, see HistoricStatusCode in Appendix 1.</p> | String (5) | SDSFIE |

Data Layer Specification – Cemetery or Burial Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------------------|---|--|--------------------|----------|
| | otherRegisterStatus | Specifies placement on the World Heritage List, or a cultural property inventory/registry of the host nation. | Status of site on any additional inventory, registry or list. | String (150) | SDSFIE |
| D | isActive | Indicates whether cemetery or burial site is actively used or maintained. | NA, no, TBD, yes | String (3) | AF |
| | lastInspectionDate | The date of the last inspection of the feature. Format for date is YYYYMMDD (i.e. September 15, 1994 = 19940915). MCRAD Register table. | | Integer (Long) | AF |
| | inspectionNotes | Any notes regarding the last inspection. | | String (255) | AF |
| | gisDataSource | The data source of the feature. | | String (255) | AF |
| | gisDataReliability | The reliability of the GIS data. | | String (255) | AF |
| | realPropertyUniqueIdentifier | The real property unique identifier (RPUID) is a non-intelligent code used to permanently and uniquely identify a real property asset. Source: RPIM 4.0a, November 4, 2010. | | String (18) | SDSFIE |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |

Data Layer Specification – Cemetery or Burial Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |

Data Layer Specification – Cemetery or Burial Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |

Data Layer Specification – Cemetery or Burial Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | 0 | ESRI |
| | SHAPE_Area | ESRI-generated field. | | 0 | ESRI |

Business Tables

The business tables will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. The business tables for CemeteryOrBurialSite_A and CemeteryOrBurialSite_P are:

| Table Name | Identifier | Source |
|---------------------------|------------|----------------|
| cr_CemeteryOrBurialSite_A | ResourceID | MCRAD database |
| cr_CemeteryOrBurialSite_P | ResourceID | MCRAD database |

Business Table Attributes for cr_CemeteryOrBurialSite_A and cr_CemeteryOrBurialSite_P

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|--|---|--------------------|
| | ResourceID | Primary Key in MCRAD Resources table. Used to link this business table to the appropriate feature class. | MCRAD Resources table | String (50) |
| | Res_Num | Smithsonian trinomial or equivalent. MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Res_Name | Site name recognized by agency. MCRAD Resources table. | MCRAD Resources table | String (100) |
| | Res_Grp | Type of resource (single, district, route, other aggregate groupings, etc.). MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Res_Desc | Short description of resource. MCRAD Resources table. | MCRAD Resources table | String (255) |
| | Condition | Overall condition, nature of disturbances, etc. MCRAD Resources table. | MCRAD Resources table | String (255) |
| D | Disturb | The percentage of the site that has been disturbed. MCRAD Resources table. | MCRAD Resources table For a list of domain values, see Disturbance in Appendix 1. | String (10) |
| | Disturb_Source | Describes the source of the disturbance. MCRAD Resources table. | MCRAD Resources table | String (250) |
| D | Threatened | Indicates whether resource is threatened. MCRAD Resources table. | MCRAD Resources table NA, no, TBD, yes | String (3) |
| | Threats | Describes the nature of threats to resource. MCRAD Resources table. | MCRAD Resources table | String (255) |

Data Layer Specification – Cemetery or Burial Site

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|------------------|--|---|--------------------|
| D | Res_Status | Research status: Evaluated? Excavated? MCRAD Resources table. | MCRAD Resources table For a list of domain values, see SiteStatus in Appendix 1. | String (15) |
| | Drainage | River drainage where resource is located. MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Physio_Prov | Name of physiographic province. MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Size_Notes | Any notes regarding the size of the feature. MCRAD Resources table. | MCRAD Resources table | String (255) |
| | Occ_Start | The occupation start year. MCRAD Resources table. | MCRAD Resources table | Double |
| | Occ_End | The occupation end year. MCRAD Resources table. | MCRAD Resources table | Double |
| D | Date_Meth | Method used to determine date. MCRAD Resources table. | MCRAD Resources table For a list of domain values, see DateMethod in Appendix 1. | String (20) |
| | Fac_Num | Air Force building or facility number (for historic buildings/structures on base property). MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Deposition | Deposition: such as Buri, Surf, or both. MCRAD Resources table. | MCRAD Resources table | String (50) |
| D | Artifact_Density | Density of artifacts within the area. MCRAD Resources table. | MCRAD Resources table For a list of domain values, see ArtifactDensity in Appendix 1. | String (25) |
| | Rec_Date | Date resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Rec_Month | Month resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Rec_Day | Day resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |

Data Layer Specification – Cemetery or Burial Site

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|---|---|--------------------|
| | Rec_Year | Year resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Register_Name | Identifies the name of the register (e.g. World Heritage, Host Nation Register). MCRAD Register table. | MCRAD Register table | String (50) |
| | Op_Source | Source of opinion (Consultant, Agency). MCRAD Register table. | MCRAD Register table | String (50) |
| | Signif_Level | Significance level: International, National, Provincial, Local. MCRAD Register table. | MCRAD Register table / International, National, Provincial, Local | String (50) |
| | A | NRHP Criterion A. MCRAD Register table. | MCRAD Register table | String (3) |
| | B | NRHP Criterion B. MCRAD Register table. | MCRAD Register table | String (3) |
| | C | NRHP Criterion C. MCRAD Register table. | MCRAD Register table | String (3) |
| | D | NRHP Criterion D. MCRAD Register table. | MCRAD Register table | String (3) |
| | CritConsid | Describes the NRHP criteria considerations (Less than 50 years of age, Church, Relocated, etc). MCRAD Register table. | MCRAD Register table | String (255) |
| | I1 | Integrity of location. MRCAD Register table. | MCRAD Register table | String (50) |
| | I2 | Integrity of design. MRCAD Register table. | MCRAD Register table | String (50) |
| | I3 | Integrity of setting. MRCAD Register table. | MCRAD Register table | String (50) |
| | I4 | Integrity of materials. MRCAD Register table. | MCRAD Register table | String (50) |
| | I5 | Integrity of workmanship. MRCAD Register table. | MCRAD Register table | String (50) |
| | I6 | Integrity of feeling. MRCAD Register table. | MCRAD Register table | String (50) |
| | I7 | Integrity of association. MRCAD Register table. | MCRAD Register table | String (50) |

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|---|---|--------------------|
| | Sig_Per | The period of significance. MCRAD Register table. | MCRAD Register table | String (50) |
| | Themes | Applicable National Register themes. MCRAD Register table. | MCRAD Register table | String (255) |
| | Sensitivity | The potential effects (i.e. Sensitive to visual effects, Excavation, etc). MCRAD Register table. | MCRAD Register table | String (50) |
| | Date_Notes | Notes on the date for the NR opinion. MCRAD Register table. | MCRAD Register table | String (255) |
| | Recon_Year | The year the opinion needs to be reconsidered, such as when a property reaches 50 years of age. MCRAD Register table. | MCRAD Register table | Integer (Long) |
| | Opinion_Status | The status of the opinion, such as Official-Current, Official-Not Current, Unofficial, Advisory. MCRAD Register table. | MCRAD Register table / Official-Current, Official-Not Current, Unofficial, Advisory | String (50) |
| | Opinion_Date | The date in which NRHP status opinion was rendered. Format for date is YYYYMMDD (i.e. September 15, 1994 = 19940915). MCRAD Register table. | MCRAD Register table | Integer (Long) |
| | Notes | Notes. MCRAD Resources and Register tables. | MCRAD Resources and Register table | String (255) |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

Data Layer Specification – Cemetery or Burial Site

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Cultural Resources, Cemetery or Burial Site

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: ArtifactDensity | |
|------------------------------------|--|
| ATTRIBUTE NAME: Artifact_Density | |
| CODED DOMAIN | DEFINITION |
| none | There were not any artifacts found at this site. |
| low1 | Artifact density is low at 1. Based on a density range between 1-10. |
| moderate2-5 | Artifact density range is moderate between 2-5. Based on a density range between 1-10. |
| high6-10 | Artifact density range is high between 6-10. Based on a density range between 1-10. |
| veryHigh10 | Artifact density is very high at greater than 10. Based on a density range between 1-10. |
| veryLow10 | Artifact density is very low at 1 - 10. Based on a density range between 1-1000. |
| low11-24 | Artifact density range is low between 11-24. Based on a density range between 1-1000. |
| moderate25-100 | Artifact density range is moderate between 25-100. Based on a density range between 1-1000. |
| high101-1000 | Artifact density range is high between 101-1000. Based on a density range between 1-1000. |
| veryHigh1000 | Artifact density is very high at greater than 1000. Based on a density range between 1-1000. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The artifact density of this location is unknown. |

| DOMAIN TABLE NAME: DateMethod | |
|-------------------------------|---|
| ATTRIBUTE NAME: Date_Meth | |
| CODED DOMAIN | DEFINITION |
| archaeomagnetic | Date method type is archaeomagnetic. |
| bioluminescence | Date method type is bioluminescence. |
| biosilicates | Date method type is biosilicates. |
| c14 | Date method type is C-14 radioactive. |
| ceramicDating | Date method type is ceramic dating. |
| chronometric | Date method type is absolute/chronometric. |
| NA | Not Applicable: No value exists. |
| none | A date method type was not used. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| projectilePt | The date method type is projectile point technique inference. |
| relative | The data method type is relative. |
| researchExp | The date method type is research/experience. |
| seriation | The date method type is seriation. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| thermolumin | The date method type is thermoluminescence. |
| treeRing | The date method type is tree ring. |

Data Layer Specification – Cemetery or Burial Site

| DOMAIN TABLE NAME: Disturbance | |
|--------------------------------|---|
| ATTRIBUTE NAME: Disturb | |
| CODED DOMAIN | DEFINITION |
| destroyed | The feature has been destroyed. |
| majorImp | The feature has experienced major impact with 51-99% disturbed. |
| minorImp | The feature has experienced minor impact with 1-25% disturbed. |
| modImp | The feature has experienced moderate impact with 26-50% disturbed. |
| NA | Not Applicable: No value exists. |
| none | No disturbance has impacted the feature. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The disturbance level of the feature is unknown. |

| DOMAIN TABLE NAME: HistoricStatusCode | |
|--|--|
| ATTRIBUTE NAME: nationalRegisterStatus | |
| CODED DOMAIN | DEFINITION |
| DNE | Determined Not Eligible for Listing: An asset that has been evaluated using the National Register of Historic Places (NRHP) criteria and is determined not to meet the criteria of eligibility. |
| DNR | Designation Rescinded for NHLI/NHLC/NREI/NREC National Register Property: Determined by the Keeper of the National Register of Historic Places (NRHP) to no longer meet the criteria for listing in the NRHP. |
| ELPA | Eligible for the Purposes of a Program Alternative: An asset that is included within the scope of a program alternative developed and implemented pursuant to 36 CFR 800.14, Protection of Historic Properties. |
| NA | Not Applicable: No value exists. |
| NAR | Not Assessed Routinely: An asset that is not routinely planned to be evaluated for National Register of Historic Places (NRHP) eligibility. |
| NCE | Non-Contributing Element of NHL/NRL/NRE District: Assets within the designated boundaries of a National Historic Landmark (NHL) or National Register of Historic Places (NRHP) listed or eligible property that have been evaluated and determined not to contribute to the historic significance of the property. |
| NEV | Not Yet Evaluated: An asset that has not been evaluated for National Register of Historic Places (NRHP) eligibility. |
| NHLC | Contributing Element of a NHL District: An asset that is identified as a contributing element of a larger property listed in the National Register of Historic Places (NRHP) and also designated a National Historic Landmark (NHL) by the Secretary of Interior. |
| NHLI | Individual National Historic Landmark: An asset that is individually listed in the National Register of Historic Places (NRHP) and also designated as a National Historic Landmark (NHL) by the Secretary of Interior. |
| NREC | Contributing Element of NRE District: An asset that is identified as a contributing element of a larger property or district determined eligible for inclusion in the National Register of Historic Places (NRHP). |
| NREI | Individual National Register Eligible: An individual asset that is determined to meet the National Register of Historic Places (NRHP) criteria of eligibility. |
| NRLC | Contributing Element of NRL District: An asset that is identified as a contributing element of a historic property listed in the National Register of Historic Places (NRHP). |
| NRLI | Individual National Register Listed: An individual asset that has been listed in the National Register of Historic Places (NRHP). |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

Data Layer Specification – Cemetery or Burial Site

| DOMAIN TABLE NAME: SiteStatus | |
|-------------------------------|---|
| ATTRIBUTE NAME: Res_Status | |
| CODED DOMAIN | DEFINITION |
| collection | Items have been collected from the site. |
| evaluated | The site has been evaluated. |
| excavated | The site has been excavated. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| partMitigate | The site is in partial mitigation. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| tested | The site has been tested. |
| undisturbed | The site is undisturbed (Surveyed - No Collections). |
| unknown | The site status is unknown. |

**Data Layer Specifications for:
Cultural Resource
Potential Area**

**United States Air Force
Environmental GIS Program**

Revision History

| Date: | Version: | Description of Revision: |
|------------|--|---|
| 12/12/2016 | CulturalResourcePotentialArea_20161212 | <ul style="list-style-type: none"> Removed “the vertical datum shall be Mean Sea Level (MSL_Height),” from the Coordinate System section. |
| 6/23/2016 | CulturalResourcePotentialArea_20160623 | <ul style="list-style-type: none"> Updated “Positional Accuracy” section. |
| 3/10/2017 | CulturalResourcePotentialArea_20170310 | <ul style="list-style-type: none"> Updated all Air Force Standard attribute fields to match August 6, 2015 GeoBase Data Dictionary. Updated “Positional Accuracy” section. Updated “For Empty Text Values” subsection. |
| 6/8/2017 | CulturalResourcePotentialArea_20170608 | <ul style="list-style-type: none"> Updated the data layer update frequency in the “Sources and Source Selection” section. Updated “Data Steward POC” |
| 03/01/2018 | CulturalResourcePotentialArea_20180301 | <ul style="list-style-type: none"> Updated the “Definition”, “Geometry/Topology”, “Positional Accuracy”, “Attributes”, “Business Tables,” and “Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Domain Tables” sections. |

This Data Layer Specification (DLS) defines geospatial data specifications for the CulResPotentialArea_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

An area with an associated level of confidence, however determined, relating to the occurrence of cultural resources that has not been verified by intensive field study.

Data Layer Details

| | |
|--|---|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | CulResPotentialArea_A |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | CulturalResources |
| Previous Layer Names: | cult_probable_sensitive_area CulturalResourcePotentialArea |
| Geometry Type: | Polygon |
| Data Steward Organization (Program Area): | Program Area: Cultural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Cultural Resources Program SME |
| Representation: | <ul style="list-style-type: none"> • Cultural resource potential areas are represented as closed polygons depicting the outermost extent of the area. • Each individual cultural resource potential area is represented by a single area feature. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|---------------------------------|--|
| HQ AF/A7CAN | <ul style="list-style-type: none"> • AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007 • AFI32-7062, Comprehensive Planning, 27 June 2013 • AFI32-7064, Integrated Natural Resources Management, 18 November 2014 • AFI32-7065, Cultural Resources Management Program, 19 November 2014 • AFH32-9007, Managing Air Force Real Property, 1 May 1999 • AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 |

| Implementing Program(s): | Driver(s): |
|--------------------------|--|
| | <ul style="list-style-type: none"> • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 • Executive Order (EO) 13287, Preserve America |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Military Cultural Resources Analysis Database (MCRAD) is a relational data model that uses the functionality of Microsoft Access. It was created by Dr. Paul Green in collaboration with Dr. Brian Crane to resolve the issues that arise due to idiosyncratic formats of cultural resource data. MCRAD has been refined to support cultural resource business practices with DoD-wide input and has been adopted by the Deputy Under Secretary of Defense for Installations and Environment as a cultural resources geodata standard. MCRAD, if being used, should only be used to populate the business tables.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **12 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that

95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the CulResPotentialArea_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the CulResPotentialArea_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------------|--|----------------|--------------------|----------|
| | culResPotentialAreaID PK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |

Data Layer Specification – Cultural Resource Potential Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|---|--------------------|----------|
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Cultural Resource Potential Area. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Cultural Resource Potential Area that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |

Data Layer Specification – Cultural Resource Potential Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------|---|--|--------------------|----------|
| | zoneID | Represents the Primary Key (ZoneID) for the feature in the MCRAD database. If the Zone_ID does not currently exist in MCRAD, use a concatenation of the installation siteID, the FDS code (CR), and the feature class code (YYYY) followed by a unique sequential six digit number (example: XXXX0001CRYYYY000001) to develop a unique identifier. This value is used to link to the feature class business table. See feature class Data Layer Specifications for applicable feature class code. | Feature Class Code for Cultural Resource Potential Area is "CRPA". | String (50) | AF |
| | reason | Description of the reason for the probable/sensitive area. | | String (100) | AF |
| | gisDataSource | The data source of the feature. | | String (255) | AF |
| | gisDataReliability | The reliability of the GIS data. | | String (255) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |

Data Layer Specification – Cultural Resource Potential Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |

Data Layer Specification – Cultural Resource Potential Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |

Data Layer Specification – Cultural Resource Potential Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. The business table for CulResPotentialArea_A is:

| Table Name | Identifier | Source |
|--------------------------|------------|----------------|
| cr_CulResPotentialArea_A | ZoneID | MCRAD database |

Business Table Attributes for cr_CulResPotentialArea_A

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------------|--|---|--------------------|
| | ZoneID | Primary Key in MCRAD Probability_Zones table. Relates back to CulResPotentialArea_A data layer attribute table. | MCRAD Probability_Zones table | String (50) |
| | Status | The status of the zone. MCRAD Probability_Zones table. | MCRAD Probability_Zones table | String (50) |
| D | Probability | The level of potential for the existence of cultural resources within the area: High, Medium, Low, etc. MCRAD Probability_Zones table. | MCRAD Probability_Zones table For a list of domain values, see Probability in Appendix 1. | String (15) |
| | Surv_Cost | The estimated average per acre survey cost. MCRAD Probability table. | MCRAD Probability_Zones table | Double |
| | Zone_Date | The date the probability zone was established. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). MCRAD Probability_Zones table. | MCRAD Probability_Zones table | Integer (Long) |
| | Prob_Zone_Date_Notes | Notes on the date the probability zone was created. MCRAD Probability_Zones table. | MCRAD Probability_Zones table | String (255) |
| | Prob_Zone_Notes | Notes. MCRAD Probability_Zones table. | MCRAD Probability_Zones table | String (255) |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Cultural Resources, Cultural Resource Potential Area

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: Probability | |
|--------------------------------|---|
| ATTRIBUTE NAME: Probability | |
| CODED DOMAIN | DEFINITION |
| low | A low level of potential for the existence of cultural resources within the feature. |
| moderate | A moderate level of potential for the existence of cultural resources within the feature. |
| high | A high level of potential for the existence of cultural resources within the feature. |
| noPotential | No potential for the existence of cultural resources within the feature. |
| notModeled | The area has not been modeled for determination of the level of potential for the existence of cultural resources within the feature. |
| unsurveyable | Unsurveyable due to inaccessibility stemming from natural or artificial (man-made) factors. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| 03/01/2018 | CulturalRestrictedAccess_20180301 | <ul style="list-style-type: none"> Updated the “Definition”, “Geometry/Topology”, “Positional Accuracy”, “Attributes”, “Business Tables,” and “Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Attribute Domain Tables” sections. |

This Data Layer Specification (DLS) defines geospatial data specifications for the CulRestrictedAccess_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

An area that has restricted access due to cultural concerns.

Data Layer Details

| | |
|--|---|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | CulRestrictedAccess_A |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalCulturalResources |
| Previous Layer Names: | cultural_restricted_area CulturalRestrictedAccess |
| Geometry Type: | Polygon |
| Data Steward Organization (Program Area): | Program Area: Cultural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Cultural Resources Program SME |
| Representation: | <ul style="list-style-type: none"> • Cultural restricted access areas are represented as closed polygons depicting the outermost extent of the area. • Each individual cultural restricted access area is represented by a single area feature. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|---------------------------------|--|
| HQ AF/A7CAN | <ul style="list-style-type: none"> • 36 CFR 60.4, Criteria for evaluation, 1 July 2012 • 36 CFR 63.2, Determination of eligibility process, 1 July 2012 • 36 CFR 800, Protection of Historic Properties, 1 July 2012 • Historic Sites Act of 1935 • National Historic Preservation Act of 1966 • AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007 • AFI32-7062, Comprehensive Planning, 27 June 2013 • AFI32-7064, Integrated Natural Resources Management, 18 November 2014 |

| Implementing Program(s): | Driver(s): |

| | <ul style="list-style-type: none"> • AFI32-7065, Cultural Resources Management Program, 19 November 2014 • AFH32-9007, Managing Air Force Real Property, 1 May 1999 • AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Military Cultural Resources Analysis Database (MCRAD) is a relational data model that uses the functionality of Microsoft Access. It was created by Dr. Paul Green in collaboration with Dr. Brian Crane to resolve the issues that arise due to idiosyncratic formats of cultural resource data. MCRAD has been refined to support cultural resource business practices with DoD-wide input and has been adopted by the Deputy Under Secretary of Defense for Installations and Environment as a cultural resources geodata standard. MCRAD, if being used, should only be used to populate the business tables.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer is meant to hide the true location of culturally sensitive areas, thus horizontal positional accuracy is not applicable.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the CulRestrictedAccess_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the CulRestrictedAccess_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-------------------------|--|----------------|--------------------|----------|
| | culRestrictedAccessIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |

Data Layer Specification – Cultural Restricted Access

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|--|--------------------|----------|
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Cultural Restricted Access area. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Cultural Restricted Access area that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |

Data Layer Specification – Cultural Restricted Access

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------|--|--|--------------------|----------|
| | manAreID | Represents the Primary Key (ManAreID) for the feature in the MCRAD database. If the Man_Are_ID does not currently exist in MCRAD, use a concatenation of the installation siteID, the FDS code (CR), and the feature class code (YYYY) followed by a unique sequential six digit number (example: XXXX0001CRYYYY000001) to develop a unique identifier. This value is used to link to the feature class business table. See feature class Data Layer Specifications for applicable feature class code. | Feature Class Code for Cultural Restricted Access is "CRAA". | String (50) | AF |
| | gisDataSource | The data source of the feature. | | String (255) | AF |
| | gisDataReliability | The reliability of the GIS data. | | String (255) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |

Data Layer Specification – Cultural Restricted Access

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard . | String (5) | AF |

Data Layer Specification – Cultural Restricted Access

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. The business table for CulRestrictedAccess_A is:

| Table Name | Identifier | Source |
|--------------------------|------------|----------------|
| cr_CulRestrictedAccess_A | ManAreID | MCRAD database |

Business Table Attributes for cr_CulRestrictedAccess_A

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------------|--|------------------------------|--------------------|
| | ManAreID | Primary Key in MCRAD Management_Area table. Relates back to CulRestrictedAccess_A data layer attribute table. | MCRAD Management_Area table | String (50) |
| | Area_Name | Name of the management area. MCRAD Management_Area table. | MCRAD Management_Area table | String (250) |
| | Area_Stt_D | The status of the area. MCRAD Management_Area table. | MCRAD Management_Area table | String (16) |
| | Reason | The reason for the restriction or particular procedure. MCRAD Management_Area table. | MCRAD Management_Area table | String (240) |
| | Mgt_Area_Description | Description of the management area. MCRAD Management_Area table. | MCRAD Management_Area table | String (255) |
| | Mgt_Area_Start_Date | Beginning date of the management area designation. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). MCRAD Management_Area table. | MCRAD Management_Area table | Integer (Long) |
| | Mgt_Area_End_Date | End date of the management area designation. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). MCRAD Management_Area table. | MCRAD Management_Area table | Integer (Long) |
| | Mgt_Area_Notes | Notes. MCRAD Management_Area table. | MCRAD Management_Area table | String (255) |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Cultural Resources, Cultural Restricted Access

| 3/10/2017 | CulturalSurveyArea_20170310 | <ul style="list-style-type: none"> Updated all Air Force Standard attribute fields to match August 6, 2015 GeoBase Data Dictionary. Updated “Positional Accuracy” section. Updated “For Empty Text Values” subsection. |
| 6/8/2017 | CulturalSurveyArea_20170608 | <ul style="list-style-type: none"> Updated the data layer update frequency in the “Sources and Source Selection” section. Updated “Data Steward POC” |
| 03/01/2018 | CulturalSurveyArea_20180301 | <ul style="list-style-type: none"> Updated the “Definition”, “Geometry/Topology”, “Positional Accuracy”, “Attributes”, “Business Tables,” and “Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Attribute Domain Tables” sections. |

Data Layer Specification – Cultural Survey Area

This Data Layer Specification (DLS) defines geospatial data specifications for the CulSurveyArea_A and CulSurveyArea_P data layers implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

The area in which a cultural resource inventory has been conducted.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | CulSurveyArea_A CulSurveyArea_P |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalCulturalResources |
| Previous Layer Names: | cultural_cleared_area cultural_survey_area CulturalSurveyArea |
| Geometry Type: | Polygon, Point |
| Data Steward Organization (Program Area): | Program Area: Cultural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Cultural Resources Program SME |
| Representation: | <ul style="list-style-type: none"> • A cultural survey area will represent the outermost limit of a known cultural survey. • Each individual survey area is represented by a single area feature. • All points developed from an area shall represent the centroid of the cultural survey area. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |

| | <ul style="list-style-type: none"> • AFI32-7064, Integrated Natural Resources Management, 18 November 2014 • AFI32-7065, Cultural Resources Management Program, 19 November 2014 • AFH32-9007, Managing Air Force Real Property, 1 May 1999 • AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 • Executive Order (EO) 13287, Preserve America |

Geometry/Topology

| |
|--|
| Polygon Features: |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |
| Point Features: |
| If a point represents a polygon feature, then the point must fall properly inside of the coinciding polygon. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Military Cultural Resources Analysis Database (MCRAD) is a relational data model that uses the functionality of Microsoft Access. It was created by Dr. Paul Green in collaboration with Dr. Brian Crane to resolve the issues that arise due to idiosyncratic formats of cultural resource data. MCRAD has been refined to support cultural resource business practices with DoD-wide input and has been adopted by the Deputy Under Secretary of Defense for Installations and Environment as a cultural resources geodata standard. MCRAD, if being used, should only be used to populate the business tables.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the CulSurveyArea_A and CulSurveyArea_P layers will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the CulSurveyArea_A and CulSurveyArea_P data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|---|--------------------|----------|
| | culSurveyAreaIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Cultural Survey Area. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Cultural Survey Area that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize (<i>Polygon geometry</i>) | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM (<i>Polygon geometry</i>) | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize (<i>Polygon geometry</i>) | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM (<i>Polygon geometry</i>) | The perimeter unit of measure. | foot | String (25) | AF |

Data Layer Specification – Cultural Survey Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|-----------------|--------------------|----------|
| | latitude (<i>Polygon geometry</i>) | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude (<i>Polygon geometry</i>) | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid (<i>Polygon geometry</i>) | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | latitude (<i>Point geometry</i>) | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude (<i>Point geometry</i>) | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | MGRS (<i>Point geometry</i>) | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation (<i>Point geometry</i>) | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM (<i>Point geometry</i>) | The unit of measure for elevation dimension. | foot | String (25) | AF |

Data Layer Specification – Cultural Survey Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------|---|--|--------------------|----------|
| | eventID | Represents the Primary Key (EventID) for the feature in the MCRAD database. If the Event_ID does not currently exist in MCRAD, use a concatenation of the installation siteID, the FDS code (CR), and the feature class code (YYYY) followed by a unique sequential six digit number (example: XXXX0001CRYYYY000001) to develop a unique identifier. This value is used to link to the feature class business table. See feature class Data Layer Specifications for applicable feature class code. | Feature Class Codes for Cultural Survey Area: Area – “CSAA” Point – “CSAP”. | String (50) | AF |
| | gisDataSource | The data source of the feature. | | String (255) | AF |
| | gisDataReliability | The reliability of the GIS data. | | String (255) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |

Data Layer Specification – Cultural Survey Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard . | String (5) | AF |

Data Layer Specification – Cultural Survey Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business tables will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. The business tables for CulSurveyArea_A and CulSurveyArea_P are:

| Table Name | Identifier | Source |
|--------------------------|------------|-----------------------------|
| cr_CulSurveyArea_A | EventID | MCRAD Events table |
| cr_CulturalSurveyMethods | EventID | MCRAD Surv_Meth_Areas table |
| cr_CulturalSurveyTests | EventID | MCRAD Survey_Tests table |

Business Table Attributes for cr_CulSurveyArea_A and cr_CulSurveyArea_P

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|--|--|--------------------|
| | EventID | Primary Key in MCRAD Events table. Used to link this business table to the appropriate feature class. | MCRAD Events table | String (50) |
| | Event_Type | Describes the type of event: Literature Search, Eval, Data Recovery, Accidental Discovery, Vandalism, Unanticipated Effect, etc. MCRAD Events table. | MCRAD Events table / Literature Search, Eval, Data Recovery, Accidental Discovery, Vandalism, Unanticipated Effect, etc. | String (50) |
| | Event_Desc | Description of event. MCRAD Events table. | MCRAD Events table | String (255) |
| | Law | Preservation law followed or violated. MCRAD Events table. | MCRAD Events table | String (50) |
| | Agency_Num | Agency assigned project identifier. MCRAD Events table. | MCRAD Events table | String (20) |
| | Project_Name | The name of the project. MCRAD Events table. | MCRAD Events table | String (255) |
| | Recorder | Individual/Group recording event. MCRAD Events table. | MCRAD Events table | String (100) |
| | Lead_Agency | Lead agency for Section 106 purposes. MCRAD Events table. | MCRAD Events table | String (50) |
| | Hours | Personnel/Hours spent on site. MCRAD Events table. | MCRAD Events table | Double |
| | Permit_Agency | Agency that gave ARPA Permit. MCRAD Events table. | MCRAD Events table | String (50) |

Data Layer Specification – Cultural Survey Area

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|--|---|--------------------|
| | Permit_No | Number of permit. MCRAD Events table. | MCRAD Events table | String (50) |
| | App_Date | Date of permit application. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). MCRAD Events table. | MCRAD Events table | Integer (Long) |
| | Appr_Date | Date of permit approval. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). MCRAD Events table. | MCRAD Events table | Integer (Long) |
| | Exp_Date | Date of permit expires. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). MCRAD Events table. | MCRAD Events table | Integer (Long) |
| | Permit_Stat | The status of the permit: Approved, Pending, Terminated. MCRAD Events table. | MCRAD Events table / Approved, Pending, Terminated | String (50) |
| | Tribes | Tribes notified per 32 CFR 229.7 or ARPA. MCRAD Events table. | MCRAD Events table | String (250) |
| | Value_Rec | Value received in awards, property/artifacts siezed. MCRAD Events table. | MCRAD Events table | Double |
| | Value_Note | Source of value received (Grant, Confiscation of stolen material, etc.). MCRAD Events table. | MCRAD Events table / Grant, Confiscation of stolen material, etc. | String (50) |
| | Survey_Cost | Cost of event. MCRAD Events table. | MCRAD Events table | Double |
| | Cost_Note | Source of cost (Contractor for consultant, Damage lost, Cost for law enforcement). MCRAD Events table. | MCRAD Events table / Contractor for consultant, Damage lost, Cost for law enforcement | String (50) |

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|-------------------|---|------------------------------|--------------------|
| | Begin_Date_Survey | Beginning date of event. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). MCRAD Events table. | MCRAD Events table | Integer (Long) |
| | End_Date_Survey | End date of event. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). MCRAD Events table. | MCRAD Events table | Integer (Long) |

Business Table Attributes for cr_CulturalSurveyMethods_A and cr_CulturalSurveyMethods_P

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|--------------------|--|--|--------------------|
| | EventIDFK | Used to link this business table to the appropriate feature class. | MCRAD Surv_Meth_Areas table | String (50) |
| | Meth_Area_ID | Primary Key in Surv_Meth_Areas table in MCRAD. | MCRAD Surv_Meth_Areas table | String (50) |
| D | Method | Survey method used in survey subarea. MCRAD Surv_Meth_Areas table. | MCRAD Surv_Meth_Areas table For a list of domain values, see SurveyMethod in Appendix 1. | String (20) |
| | Begin_Date_Methods | Beginning date of survey in subarea. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). MCRAD Surv_Meth_Areas table. | MCRAD Surv_Meth_Areas table | Integer (Long) |
| | End_Date_Methods | End date of survey in subarea. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). MCRAD Surv_Meth_Areas table. | MCRAD Surv_Meth_Areas table | Integer (Long) |

Data Layer Specification – Cultural Survey Area

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|--|---|--------------------|
| | Survey_Int | Survey intensity: Records search, Prelim field, Intens field, % Surveyed. MCRAD Surv_Meth_Areas table. | MCRAD Surv_Meth_Areas table | String (50) |
| | Survey_Config | Survey configuration: Block, Transect. MCRAD Surv_Meth_Areas table. | MCRAD Surv_Meth_Areas table / Block, Transect | String (50) |
| | Bias | Particular survey bias: i.e. Only looking for particular resource types. MCRAD Surv_Meth_Areas table. | MCRAD Surv_Meth_Areas table | String (50) |
| | Pedestrian | Type of pedestrian survey. MCRAD Surv_Meth_Areas table. | MCRAD Surv_Meth_Areas table | String (50) |
| | Ped_Coll | Surface collection methods (All, Diagnostic only, etc). MCRAD Surv_Meth_Areas table. | MCRAD Surv_Meth_Areas table | String (50) |
| | Shovel_Tests | Shovel tests used. MCRAD Surv_Meth_Areas table. | MCRAD Surv_Meth_Areas table | Double |
| | Excav_Units | Excavation units. MCRAD Surv_Meth_Areas table. | MCRAD Surv_Meth_Areas table | Double |
| | Pedest_Int | Pedestrian interval. MCRAD Surv_Meth_Areas table. | MCRAD Surv_Meth_Areas table | String (50) |
| | Trans_Num | Number of transects. MCRAD Surv_Meth_Areas table. | MCRAD Surv_Meth_Areas table | String (50) |
| | STP_Interval | STP Interval. MCRAD Surv_Meth_Areas table. | MCRAD Surv_Meth_Areas table | String (50) |
| | Unit_Size | Size of excavation units. MCRAD Surv_Meth_Areas table. | MCRAD Surv_Meth_Areas table | String (50) |
| | Unit_Interval | Excavation unit interval. MCRAD Surv_Meth_Areas table. | MCRAD Surv_Meth_Areas table | String (50) |
| | Unit_Number | Number of excavation units. MCRAD Surv_Meth_Areas table. | MCRAD Surv_Meth_Areas table | String (50) |
| | Field_Cond | Description of field conditions. MCRAD Surv_Meth_Areas table. | MCRAD Surv_Meth_Areas table | String (50) |

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|-----------------|---|------------------------------|--------------------|
| | Perc_Grnd_Visib | % Ground Visibility. MCRAD Surv_Meth_Areas table. | MCRAD Surv_Meth_Areas table | String (50) |
| | Method_Notes | Notes. MCRAD Surv_Meth_Areas table. | MCRAD Surv_Meth_Areas table | String (255) |

Business Table Attributes for cr_CulturalSurveyTests_A and cr_CulturalSurveyTests_P

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|--|------------------------------|--------------------|
| | EventIDFK | Used to link this business table to the appropriate feature class. | MCRAD Survey_Tests table | String (50) |
| | Test_ID | Primary Key in Survey_Tests table in MCRAD. | MCRAD Survey_Tests table | String (50) |
| | Test_Name | Test field ID. MCRAD Survey_Tests table. | MCRAD Survey_Tests table | String (50) |
| | Excavator | Excavator's name. MCRAD Survey_Tests table. | MCRAD Survey_Tests table | String (30) |
| | StratSum | Stratigraphy summary. MCRAD Survey_Tests table. | MCRAD Survey_Tests table | String (60) |
| | ArtSum | Artifact summary. MCRAD Survey_Tests table. | MCRAD Survey_Tests table | String (240) |
| | Ext_Typ_D | Test type (STP, Unit, etc). MCRAD Survey_Tests table. | MCRAD Survey_Tests table | String (16) |
| | Depth | Depth of excavatoin. MCRAD Survey_Tests table. | MCRAD Survey_Tests table | Double |
| | Depth_U_D | Depth units. MCRAD Survey_Tests table. | MCRAD Survey_Tests table | String (16) |
| | Test_Notes | Notes. MCRAD Survey_Tests table. | MCRAD Survey_Tests table | String (255) |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Cultural Resources, Cultural Survey Area

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: SurveyMethod | |
|---------------------------------|---|
| ATTRIBUTE NAME: Method | |
| CODED DOMAIN | DEFINITION |
| aerial100 | Aerial Survey - 100% |
| aerialJudg | Aerial Survey - Judgmental |
| aerialSample | Aerial Survey - Sample |
| aerialUnk | Aerial Survey - Methodology Unknown |
| amateurReport | Amateur Report |
| auger100 | Auger Test Survey - 100% |
| augerJudg | Auger Test Survey - Judgmental |
| augerSample | Auger Test Survey - Sample |
| augerUnk | Auger Test Survey - Methodology Unknown |
| automobile | Automobile Survey |
| bankline100 | Bankline Survey - 100% |
| banklineJudg | Bankline Survey - Judgmental |
| banklineSample | Bankline Survey - Sample |
| banklineUnk | Bankline Survey - Methodology Unknown |
| collected | Collected/Collections |
| eqpExcavation | Heavy Equipment Excavation |
| excavated | Excavated |
| informAmateur | Informed Amateur |
| lit100 | Literature Survey - 100% |
| litJudg | Literature Survey - Judgmental |
| litSample | Literature Survey - Sample |
| litUnk | Literature Survey - Methodology Unknown |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| remote100 | Remote Sensing Survey - 100% |
| remoteJudg | Remote Sensing Survey - Judgmental |
| remoteSample | Remote Sensing Survey - Sample |
| remoteUnk | Remote Sensing Survey - Methodology Unknown |
| serendipity | Serendipity |
| shovel100 | Shovel Test Survey - 100% |
| shovelJudg | Shovel Test Survey - Judgmental |
| shovelSample | Shovel Test Survey - Sample |
| shovelUnk | Shovel Test Survey - Methodology Unknown |
| surface100 | Surface Survey - 100% |
| surfaceJudg | Surface Survey - Judgmental |
| surfaceSample | Surface Survey - Sample |
| surfaceUnk | Surface Survey - Methodology Unknown |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| tested | Tested |
| underwtr100 | Underwater Survey - 100% |
| underwtrJudg | Underwater Survey - Judgmental |
| underwtrSample | Underwater Survey - Sample |
| underwtrUnk | Underwater Survey - Methodology Unknown |
| undisturbed | Undisturbed (Surveyed, No Collections) |
| unknown | The survey methodology is unknown. |

**Data Layer Specifications for:
Historic Building**

**United States Air Force
Environmental GIS Program**

Revision History

| Date: | Version: | Description of Revision: |
|------------|---------------------------|--|
| 12/12/2016 | HistoricBuilding_20161212 | <ul style="list-style-type: none"> Removed “the vertical datum shall be Mean Sea Level (MSL_Height),” from the Coordinate System section. |
| 10/4/2016 | HistoricBuilding_20161004 | <ul style="list-style-type: none"> Updated feature class codes used for creating Resource ID when MCRAD data is not present. |
| 6/23/2016 | HistoricBuilding_20160623 | <ul style="list-style-type: none"> Updated HistoricBuilding_P representation under “Data Layer Details” section. Updated “Positional Accuracy” section. |
| 3/10/2017 | HistoricBuilding_20170310 | <ul style="list-style-type: none"> Updated all Air Force Standard attribute fields to match August 6, 2015 GeoBase Data Dictionary. Updated “Positional Accuracy” section. Updated “For Empty Text Values” subsection. Updated the “Representation” subsection of the “Data Layer Details” section. Updated the “Point Features” subsection of the “Geometry/Topology” section. |
| 6/8/2017 | HistoricBuilding_20170608 | <ul style="list-style-type: none"> Updated the data layer update frequency in the “Sources and Source Selection” section. Updated “Data Steward POC” |
| 03/01/2018 | HistoricBuilding_20180301 | <ul style="list-style-type: none"> Updated the “Definition”, “Geometry/Topology”, “Positional Accuracy”, “Attributes”, “Business Tables,” and “Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Attribute Domain Tables” sections. |

This Data Layer Specification (DLS) defines geospatial data specifications for the HistoricBuilding_A and HistoricBuilding_P data layers implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

A building or structure that has cultural significance due to its historic background, association with a famous person, or its architectural features.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | HistoricBuilding_A HistoricBuilding_P |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalCulturalResources |
| Previous Layer Names: | historic_structure_area historic_structure_point HistoricObject HistoricObject_P |
| Geometry Type: | Polygon, Point |
| Data Steward Organization (Program Area): | Program Area: Cultural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Cultural Resources Program SME |
| Representation: | <ul style="list-style-type: none"> • Historic building areas are represented as closed polygons depicting the outermost footprint of the building. • Each individual historic building is represented by a single area feature. • All points developed from areas shall represent the centroid of the historic building area. |

Implementing Authorities and Regulations

| | |
|---------------------------------|---|
| Implementing Program(s): | Driver(s): |
| HQ AF/A7CAN | <ul style="list-style-type: none"> • 36 CFR 60.4, Criteria for evaluation, 1 July 2012 • 36 CFR 63.2, Determination of eligibility process, 1 July 2012 • 36 CFR 800, Protection of Historic Properties, 1 July 2012 • Historic Sites Act of 1935 • National Historic Preservation Act of 1966 |

| Implementing Program(s): | Driver(s): |
|--------------------------|--|
| | <ul style="list-style-type: none"> • AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007 • AFI32-7062, Comprehensive Planning, 27 June 2013 • AFI32-7064, Integrated Natural Resources Management, 18 November 2014 • AFI32-7065, Cultural Resources Management Program, 19 November 2014 • AFH32-9007, Managing Air Force Real Property, 1 May 1999 • AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must not overlap. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |
| Point Features: |
| Points must be disjoint. |
| If a point represents a polygon feature, then the point must fall properly inside of the coinciding polygon. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Military Cultural Resources Analysis Database (MCRAD) is a relational data model that uses the functionality of Microsoft Access. It was created by Dr. Paul Green in collaboration with Dr. Brian Crane to resolve the issues that arise due to idiosyncratic formats of cultural resource data. MCRAD has been refined to support cultural resource business practices with DoD-wide input and has been

adopted by the Deputy Under Secretary of Defense for Installations and Environment as a cultural resources geodata standard. MCRAD, if being used, should only be used to populate the business tables.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the HistoricBuilding_A and HistoricBuilding_P layers will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the HistoricBuilding_A and HistoricBuilding_P data layers.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--|--|--|--------------------|----------|
| | historicBuildingIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Historic Building. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Historic Building that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize (Polygon geometry) | The value of the measured area. | Recorded to the 1/1000 of a square foot. | Double | AF |
| D | areaSizeUOM (Polygon geometry) | The unit of measure for the area of the calculated area. | squareFeet | String (20) | AF |
| | perimeterSize (Polygon geometry) | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM (Polygon geometry) | The perimeter unit of measure. | foot | String (25) | AF |

Data Layer Specification – Historic Building

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|-----------------|--------------------|----------|
| | latitude <i>(Polygon geometry)</i> | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude <i>(Polygon geometry)</i> | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid <i>(Polygon geometry)</i> | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | |
| | latitude <i>(Point geometry)</i> | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude <i>(Point geometry)</i> | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | MGRS <i>(Point geometry)</i> | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |

Data Layer Specification – Historic Building

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|---|--|--------------------|----------|
| | elevation <i>(Point geometry)</i> | The elevation of the subject item in relation to a datum. | feet | Double | AF |
| D | elevationUOM <i>(Point geometry)</i> | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | resourceID | Represents the Primary Key (ResourceID) for the feature in the MCRAD database. If the Resource_ID does not currently exist in MCRAD, use a concatenation of the installation siteID, the FDS code (CR), and the feature class code (YYYY) followed by a unique sequential six digit number (example: XXXX0001CRYYYY000001) to develop a unique identifier. This value is used to link to the feature class business table. See feature class Data Layer Specifications for applicable feature class code. | Feature Class Codes for Historic Building: Area – “HBGA” Point – “HBGP”. | String (50) | AF |

Data Layer Specification – Historic Building

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-------------------------------|--|---|--------------------|----------|
| D | nationalRegisterStatus | Specifies the historic status of a cultural resource feature with respect to placement on the National Register of Historic Places. Categorizes the feature as one of the Real Property Asset (RPA) Historic Status Code values as defined by the DUSD landE RPIR. | For a list of domain values, see HistoricStatusCode in Appendix 1. | String (5) | SDSFIE |
| | otherRegisterStatus | Specifies placement on the World Heritage List, or a cultural property inventory/registry of the host nation. | Status of site on any additional inventory, registry or list. | String (150) | SDSFIE |
| | lastInspectionDate | The date of the last inspection of the feature. Format for date is YYYYMMDD (i.e. September 15, 1994 = 19940915). MCRAD Register table. | | Integer (Long) | AF |
| | inspectionNotes | Any notes regarding the last inspection. | | String (255) | AF |
| | gisDataSource | The data source of the feature. | | String (255) | AF |
| | gisDataReliability | The reliability of the GIS data. | | String (255) | AF |
| | realPropertyUnique Identifier | The real property unique identifier (RPUID) is a non-intelligent code used to permanently and uniquely identify a real property asset. Source: RPIM 4.0a, November 4, 2010. | | String (18) | SDSFIE |

Data Layer Specification – Historic Building

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |

Data Layer Specification – Historic Building

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |

Data Layer Specification – Historic Building

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business tables will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. The business tables for HistoricBuilding_A and HistoricBuilding_P are:

| Table Name | Identifier | Source |
|-----------------------|------------|----------------|
| cr_HistoricBuilding_A | ResourceID | MCRAD database |
| cr_HistoricBuilding_P | ResourceID | MCRAD database |

Business Table Attributes for cr_HistoricBuilding_A and cr_HistoricBuilding_P

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|--|---|--------------------|
| | ResourceID | Primary Key in MCRAD Resources table. Used to link this business table to the appropriate feature class. | MCRAD Resources table | String (50) |
| | Res_Num | Smithsonian trinomial or equivalent. MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Res_Name | Site name recognized by agency. MCRAD Resources table. | MCRAD Resources table | String (100) |
| | Res_Desc | Short description of resource. MCRAD Resources table. | MCRAD Resources table | String (255) |
| | Condition | Overall condition, nature of disturbances, etc. MCRAD Resources table. | MCRAD Resources table | String (255) |
| D | Disturb | The percentage of the site that has been disturbed. MCRAD Resources table. | MCRAD Resources table For a list of domain values, see Disturbance in Appendix 1. | String (10) |
| | Disturb_Source | Describes the source of the disturbance. MCRAD Resources table. | MCRAD Resources table | String (250) |
| D | Threatened | Indicates whether resource is threatened. MCRAD Resources table. | MCRAD Resources table NA, no, TBD, yes | String (3) |

Data Layer Specification – Historic Building

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|--|----------------------------------|--------------------|
| | Threats | Describes the nature of threats to resource. MCRAD Resources table. | MCRAD Resources table | String (255) |
| | Fac_Num | Air Force building or facility number (for historic buildings/structures on base property). MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Rec_Date | Date resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Rec_Month | Month resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Rec_Day | Day resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Rec_Year | Year resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Building_Type | A description of the feature type. MCRAD Buildings_Structures table. | MCRAD Buildings_Structures table | String (150) |
| | Architect | Name of the architect. MCRAD Buildings_Structures table. | MCRAD Buildings_Structures table | String (100) |
| | Builder | Name of the builder. MCRAD Buildings_Structures table. | MCRAD Buildings_Structures table | String (50) |
| | Development | Development description. MCRAD Buildings_Structures table. | MCRAD Buildings_Structures table | String (255) |
| | Stories | The number of stories within the building. MCRAD Buildings_Structures table. | MCRAD Buildings_Structures table | String (20) |
| | buildingLength | The length of the building. MCRAD Buildings_Structures table. | MCRAD Buildings_Structures table | Double |
| | buildingWidth | The width of the building. MCRAD Buildings_Structures table. | MCRAD Buildings_Structures table | Double |

Data Layer Specification – Historic Building

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|--------------------|---|--|--------------------|
| | Influence_Style | The influence style codes. MCRAD Buildings_Structures table. | MCRAD Buildings_Structures table | String (150) |
| | Constr_Date | Date of construction/deposition. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). MCRAD Buildings_Structures table. | MCRAD Buildings_Structures table | String (20) |
| | Building_Date_Meth | The source or method used to determine the date. MCRAD Buildings_Structures table. | MCRAD Buildings_Structures table | String (50) |
| | Primary_Style | The primary style codes. MCRAD Buildings_Structures table. | MCRAD Buildings_Structures table | String (150) |
| | ExtPlan | The exterior plan of the building. MCRAD Buildings_Structures table. | MCRAD Buildings_Structures table | String (50) |
| | IntPlan | The interior plan of the building. MCRAD Buildings_Structures table. | MCRAD Buildings_Structures table | String (50) |
| D | isContrib | Indicates whether feature contributes to NR status of resource. MCRAD Buildings_Structures table. | MCRAD Buildings_Structures table NA, no, TBD, yes | String (3) |
| D | isHousing | Indicates whether building is used for housing. MCRAD Buildings_Structures table. | MCRAD Buildings_Structures table NA, no, TBD, yes | String (3) |
| | Housing_Typ | Describes the type of housing, e.g. GOQ, Family Housing, etc. MCRAD Buildings_Structures table. | MCRAD Buildings_Structures table | String (250) |
| | Element | Doors, windows, chimneys, etc. MCRAD Building_Elements table. | MCRAD Building_Elements table | String (50) |
| | Element_Type | Hipped, frame, etc. MCRAD Building_Elements table. | MCRAD Building_Elements table | String (150) |

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|--|-------------------------------|--------------------|
| | Material | Describes the building material. MCRAD Building_Elements table. | MCRAD Building_Elements table | String (150) |
| | Treatment | Describes the treatment, e.g. Common Bond, Shingle, 4/4, etc. MCRAD Building_Elements table. | MCRAD Building_Elements table | String (50) |
| | Contributing | Describes the contributing element. MCRAD Building_Elements table. | MCRAD Building_Elements table | String (50) |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Cultural Resources, Historic Building

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: Disturbance | |
|--------------------------------|---|
| ATTRIBUTE NAME: Disturb | |
| CODED DOMAIN | DEFINITION |
| destroyed | The feature has been destroyed. |
| majorImp | The feature has experienced major impact with 51-99% disturbed. |
| minorImp | The feature has experienced minor impact with 1-25% disturbed. |
| modImp | The feature has experienced moderate impact with 26-50% disturbed. |
| NA | Not Applicable: No value exists. |
| none | No disturbance has impacted the feature. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The disturbance level of the feature is unknown. |

| DOMAIN TABLE NAME: HistoricStatusCode | |
|--|--|
| ATTRIBUTE NAME: nationalRegisterStatus | |
| CODED DOMAIN | DEFINITION |
| DNE | Determined Not Eligible for Listing: An asset that has been evaluated using the National Register of Historic Places (NRHP) criteria and is determined not to meet the criteria of eligibility. |
| DNR | Designation Rescinded for NHLI/NHLC/NREI/NREC National Register Property: Determined by the Keeper of the National Register of Historic Places (NRHP) to no longer meet the criteria for listing in the NRHP. |
| ELPA | Eligible for the Purposes of a Program Alternative: An asset that is included within the scope of a program alternative developed and implemented pursuant to 36 CFR 800.14, Protection of Historic Properties. |
| NA | Not Applicable: No value exists. |
| NAR | Not Assessed Routinely: An asset that is not routinely planned to be evaluated for National Register of Historic Places (NRHP) eligibility. |
| NCE | Non-Contributing Element of NHL/NRL/NRE District: Assets within the designated boundaries of a National Historic Landmark (NHL) or National Register of Historic Places (NRHP) listed or eligible property that have been evaluated and determined not to contribute to the historic significance of the property. |
| NEV | Not Yet Evaluated: An asset that has not been evaluated for National Register of Historic Places (NRHP) eligibility. |
| NHLC | Contributing Element of a NHL District: An asset that is identified as a contributing element of a larger property listed in the National Register of Historic Places (NRHP) and also designated a National Historic Landmark (NHL) by the Secretary of Interior. |
| NHLI | Individual National Historic Landmark: An asset that is individually listed in the National Register of Historic Places (NRHP) and also designated as a National Historic Landmark (NHL) by the Secretary of Interior. |
| NREC | Contributing Element of NRE District: An asset that is identified as a contributing element of a larger property or district determined eligible for inclusion in the National Register of Historic Places (NRHP). |
| NREI | Individual National Register Eligible: An individual asset that is determined to meet the National Register of Historic Places (NRHP) criteria of eligibility. |
| NRLC | Contributing Element of NRL District: An asset that is identified as a contributing element of a historic property listed in the National Register of Historic Places (NRHP). |

Data Layer Specification – Historic Building

| DOMAIN TABLE NAME: HistoricStatusCode | |
|--|---|
| ATTRIBUTE NAME: nationalRegisterStatus | |
| CODED DOMAIN | DEFINITION |
| NRLI | Individual National Register Listed: An individual asset that has been listed in the National Register of Historic Places (NRHP). |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

Environmental GIS Program**

Revision History

| Date: | Version: | Description of Revision: |
|------------|---------------------------|---|
| 12/12/2016 | HistoricDistrict_20161212 | <ul style="list-style-type: none"> Removed “the vertical datum shall be Mean Sea Level (MSL_Height),” from the Coordinate System section. |
| 10/4/2016 | HistoricDistrict_20161004 | <ul style="list-style-type: none"> Updated feature class code used for creating Resource ID when MCRAD data is not present. |
| 6/23/2016 | HistoricDistrict_20160623 | <ul style="list-style-type: none"> Updated “Positional Accuracy” section. |
| 3/10/2017 | HistoricDistrict_20170310 | <ul style="list-style-type: none"> Updated all Air Force Standard attribute fields to match August 6, 2015 GeoBase Data Dictionary. Updated “Positional Accuracy” section. Updated “For Empty Text Values” subsection. |
| 6/8/2017 | HistoricDistrict_20170608 | <ul style="list-style-type: none"> Updated the data layer update frequency in the “Sources and Source Selection” section. Updated “Data Steward POC” |
| 03/01/2018 | HistoricDistrict_20180301 | <ul style="list-style-type: none"> Updated the “Definition”, “Geometry/Topology”, “Positional Accuracy”, “Attributes”, “Business Tables,” and “Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Attribute Domain Tables” sections. |

This Data Layer Specification (DLS) defines geospatial data specifications for the HistoricDistrict_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

A geographically definable area, urban or rural, possessing a significant concentration, linkage, or continuity of sites, landscapes, structures, or objects, united by past events or aesthetically by plan or physical developments. A district may also be composed of individual elements separated geographically but linked by association or history.

Data Layer Details

| | |
|--|---|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | HistoricDistrict_A |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | EnvironmentalCulturalResources |
| Previous Layer Names: | historic_district_area HistoricDistrict |
| Geometry Type: | Polygon |
| Data Steward Organization (Program Area): | Program Area: Cultural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Cultural Resources Program SME |
| Representation: | <ul style="list-style-type: none"> • Historic district areas are represented as closed polygons depicting the outermost extent of the area. • Each individual historic district area is represented by a single area feature. |

Implementing Authorities and Regulations

| | |
|---------------------------------|---|
| Implementing Program(s): | Driver(s): |
| HQ AF/A7CAN | <ul style="list-style-type: none"> • 36 CFR 60.4, Criteria for evaluation, 1 July 2012 • 36 CFR 63.2, Determination of eligibility process, 1 July 2012 • 36 CFR 800, Protection of Historic Properties, 1 July 2012 • Historic Sites Act of 1935 • National Historic Preservation Act of 1966 • AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007 |

| Implementing Program(s): | Driver(s): |
|--------------------------|--|
| | <ul style="list-style-type: none"> • AFI32-7062, Comprehensive Planning, 27 June 2013 • AFI32-7064, Integrated Natural Resources Management, 18 November 2014 • AFI32-7065, Cultural Resources Management Program, 19 November 2014 • AFH32-9007, Managing Air Force Real Property, 1 May 1999 • AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must not overlap. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Military Cultural Resources Analysis Database (MCRAD) is a relational data model that uses the functionality of Microsoft Access. It was created by Dr. Paul Green in collaboration with Dr. Brian Crane to resolve the issues that arise due to idiosyncratic formats of cultural resource data. MCRAD has been refined to support cultural resource business practices with DoD-wide input and has been adopted by the Deputy Under Secretary of Defense for Installations and Environment as a cultural resources geodata standard. MCRAD, if being used, should only be used to populate the business tables.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the HistoricDistrict_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the HistoricDistrict_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|--|--------------------|----------|
| | historicDistrictIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Historical District. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Historical District that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |

Data Layer Specification – Historic District

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|---|--------------------|----------|
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | resourceID | Represents the Primary Key (ResourceID) for the feature in the MCRAD database. If the Resource_ID does not currently exist in MCRAD, use a concatenation of the installation siteID, the FDS code (CR), and the feature class code (YYYY) followed by a unique sequential six digit number (example: XXXX0001CRYYYY000001) to develop a unique identifier. This value is used to link to the feature class business table. See feature class Data Layer Specifications for applicable feature class code. | Feature Class Code for Historic District is "HDTA". | String (50) | AF |

Data Layer Specification – Historic District

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------------|--|--|--------------------|----------|
| D | nationalRegisterStatus | Specifies the historic status of a cultural resource feature with respect to placement on the National Register of Historic Places. Categorizes the feature as one of the Real Property Asset (RPA) Historic Status Code values as defined by the DUSD landE RPIR. | For a list of domain values, see HistoricStatusCode in Appendix 1. | String (5) | SDSFIE |
| | otherRegisterStatus | Specifies placement on the World Heritage List, or a cultural property inventory/registry of the host nation. | Status of site on any additional inventory, registry or list. | String (150) | SDSFIE |
| | lastInspectionDate | The date of the last inspection of the feature. Format for date is YYYYMMDD (i.e. September 15, 1994 = 19940915). MCRAD Register table. | | Integer (Long) | AF |
| | inspectionNotes | Any notes regarding the last inspection. | | String (255) | AF |
| | gisDataSource | The data source of the feature. | | String (255) | AF |
| | gisDataReliability | The reliability of the GIS data. | | String (255) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |

Data Layer Specification – Historic District

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|---|--------------------|----------|
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |

Data Layer Specification – Historic District

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. The business table for HistoricDistrict_A is:

| Table Name | Identifier | Source |
|-----------------------|------------|----------------|
| cr_HistoricDistrict_A | ResourceID | MCRAD database |

Business Table Attributes for cr_HistoricDistrict

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|--|---|--------------------|
| | ResourceID | Primary Key in MCRAD Resources table. Used to link this business table to the appropriate feature class. | MCRAD Resources table | String (50) |
| | Res_Num | Smithsonian trinomial or equivalent. MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Res_Name | Site name recognized by agency. MCRAD Resources table. | MCRAD Resources table | String (100) |
| | Res_Grp | Type of resource (single, district, route, other aggregate groupings, etc.). MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Res_Desc | Short description of resource. MCRAD Resources table. | MCRAD Resources table | String (255) |
| | Condition | Overall condition, nature of disturbances, etc. MCRAD Resources table. | MCRAD Resources table | String (255) |
| D | Disturb | The percentage of the site that has been disturbed. MCRAD Resources table. | MCRAD Resources table For a list of domain values, see Disturbance in Appendix 1. | String (10) |
| | Disturb_Source | Describes the source of the disturbance. MCRAD Resources table. | MCRAD Resources table | String (250) |
| D | Threatened | Indicates whether resource is threatened. MCRAD Resources table. | MCRAD Resources table NA, no, TBD, yes | String (3) |
| | Threats | Describes the nature of threats to resource. MCRAD Resources table. | MCRAD Resources table | String (255) |
| D | Res_Status | Research status: Evaluated? Excavated? MCRAD Resources table. | MCRAD Resources table For a list of domain values, see SiteStatus in Appendix 1. | String (15) |

Data Layer Specification – Historic District

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|------------------|--|---|--------------------|
| | Drainage | River drainage where resource is located. MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Physio_Prov | Name of physiographic province. MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Size_Notes | Any notes regarding the size of the feature. MCRAD Resources table. | MCRAD Resources table | String (255) |
| | Occ_Start | The occupation start year. MCRAD Resources table. | MCRAD Resources table | Double |
| | Occ_End | The occupation end year. MCRAD Resources table. | MCRAD Resources table | Double |
| D | Date_Meth | Method used to determine date. MCRAD Resources table. | MCRAD Resources table For a list of domain values, see DateMethod in Appendix 1. | String (20) |
| | Fac_Num | Air Force building or facility number (for historic buildings/structures on base property). MCRAD Resources table. | MCRAD Resources table | String (50) |
| D | Artifact_Density | Density of artifacts within the area. MCRAD Resources table. | MCRAD Resources table / For a list of domain values, see ArtifactDensity in Appendix 1. | String (25) |
| | Rec_Date | Date resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Rec_Month | Month resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Rec_Day | Day resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Rec_Year | Year resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |

Data Layer Specification – Historic District

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|---|---|--------------------|
| | Register_Name | Identifies the name of the register (e.g. World Heritage, Host Nation Register). MCRAD Register table. | MCRAD Register table | String (50) |
| | Op_Source | Source of opinion (Consultant, Agency). MCRAD Register table. | MCRAD Register table | String (50) |
| | Signif_Level | Significance level: International, National, Provincial, Local. MCRAD Register table. | MCRAD Register table / International, National, Provincial, Local | String (50) |
| | A | NRHP Criterion A. MCRAD Register table. | MCRAD Register table | String (3) |
| | B | NRHP Criterion B. MCRAD Register table. | MCRAD Register table | String (3) |
| | C | NRHP Criterion C. MCRAD Register table. | MCRAD Register table | String (3) |
| | D | NRHP Criterion D. MCRAD Register table. | MCRAD Register table | String (3) |
| | CritConsid | Describes the NRHP criteria considerations (Less than 50 years of age, Church, Relocated, etc). MCRAD Register table. | MCRAD Register table | String (255) |
| | I1 | Integrity of location. MRCAD Register table. | MCRAD Register table | String (50) |
| | I2 | Integrity of design. MRCAD Register table. | MCRAD Register table | String (50) |
| | I3 | Integrity of setting. MRCAD Register table. | MCRAD Register table | String (50) |
| | I4 | Integrity of materials. MRCAD Register table. | MCRAD Register table | String (50) |
| | I5 | Integrity of workmanship. MRCAD Register table. | MCRAD Register table | String (50) |
| | I6 | Integrity of feeling. MRCAD Register table. | MCRAD Register table | String (50) |
| | I7 | Integrity of association. MRCAD Register table. | MCRAD Register table | String (50) |
| | Sig_Per | The period of significance. MCRAD Register table. | MCRAD Register table | String (50) |

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|---|---|--------------------|
| | Themes | Applicable National Register themes. MCRAD Register table. | MCRAD Register table | String (255) |
| | Sensitivity | The potential effects (i.e. Sensitive to visual effects, Excavation, etc). MCRAD Register table. | MCRAD Register table | String (50) |
| | Date_Notes | Notes on the date for the NR opinion. MCRAD Register table. | MCRAD Register table | String (255) |
| | Recon_Year | The year the opinion needs to be reconsidered, such as when a property reaches 50 years of age. MCRAD Register table. | MCRAD Register table | Integer (Long) |
| | Opinion_Status | The status of the opinion, such as Official-Current, Official-Not Current, Unofficial, Advisory. MCRAD Register table. | MCRAD Register table / Official-Current, Official-Not Current, Unofficial, Advisory | String (50) |
| | Opinion_Date | The date in which NRHP status opinion was rendered. Format for date is YYYYMMDD (i.e. September 15, 1994 = 19940915). MCRAD Register table. | MCRAD Register table | Integer (Long) |
| | Notes | Notes. MCRAD Resources and Register tables. | MCRAD Resources and Register table | String (255) |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Cultural Resources, Historic District

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: ArtifactDensity | |
|------------------------------------|--|
| ATTRIBUTE NAME: Artifact_Density | |
| CODED DOMAIN | DEFINITION |
| none | There were not any artifacts found at this site. |
| low1 | Artifact density is low at 1. Based on a density range between 1-10. |
| moderate2-5 | Artifact density range is moderate between 2-5. Based on a density range between 1-10. |
| high6-10 | Artifact density range is high between 6-10. Based on a density range between 1-10. |
| veryHigh10 | Artifact density is very high at greater than 10. Based on a density range between 1-10. |
| veryLow10 | Artifact density is very low at 1 - 10. Based on a density range between 1-1000. |
| low11-24 | Artifact density range is low between 11-24. Based on a density range between 1-1000. |
| moderate25-100 | Artifact density range is moderate between 25-100. Based on a density range between 1-1000. |
| high101-1000 | Artifact density range is high between 101-1000. Based on a density range between 1-1000. |
| veryHigh1000 | Artifact density is very high at greater than 1000. Based on a density range between 1-1000. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The artifact density of this location is unknown. |

| DOMAIN TABLE NAME: DateMethod | |
|-------------------------------|---|
| ATTRIBUTE NAME: Date_Meth | |
| CODED DOMAIN | DEFINITION |
| archaeomagnetic | Date method type is archaeomagnetic. |
| bioluminescence | Date method type is bioluminescence. |
| biosilicates | Date method type is biosilicates. |
| c14 | Date method type is C-14 radioactive. |
| ceramicDating | Date method type is ceramic dating. |
| chronometric | Date method type is absolute/chronometric. |
| NA | Not Applicable: No value exists. |
| none | A date method type was not used. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| projectilePt | The date method type is projectile point technique inference. |
| relative | The data method type is relative. |
| researchExp | The date method type is research/experience. |
| seriation | The date method type is seriation. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| thermolumin | The date method type is thermoluminescence. |
| treeRing | The date method type is tree ring. |

| DOMAIN TABLE NAME: Disturbance | |
|--------------------------------|---------------------------------|
| ATTRIBUTE NAME: Disturb | |
| CODED DOMAIN | DEFINITION |
| destroyed | The feature has been destroyed. |

Data Layer Specification – Historic District

| DOMAIN TABLE NAME: Disturbance | |
|--------------------------------|---|
| ATTRIBUTE NAME: Disturb | |
| majorImp | The feature has experienced major impact with 51-99% disturbed. |
| minorImp | The feature has experienced minor impact with 1-25% disturbed. |
| modImp | The feature has experienced moderate impact with 26-50% disturbed. |
| NA | Not Applicable: No value exists. |
| none | No disturbance has impacted the feature. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The disturbance level of the feature is unknown. |

| DOMAIN TABLE NAME: HistoricStatusCode | |
|--|--|
| ATTRIBUTE NAME: nationalRegisterStatus | |
| CODED DOMAIN | DEFINITION |
| DNE | Determined Not Eligible for Listing: An asset that has been evaluated using the National Register of Historic Places (NRHP) criteria and is determined not to meet the criteria of eligibility. |
| DNR | Designation Rescinded for NHLI/NHLC/NREI/NREC National Register Property: Determined by the Keeper of the National Register of Historic Places (NRHP) to no longer meet the criteria for listing in the NRHP. |
| ELPA | Eligible for the Purposes of a Program Alternative: An asset that is included within the scope of a program alternative developed and implemented pursuant to 36 CFR 800.14, Protection of Historic Properties. |
| NA | Not Applicable: No value exists. |
| NAR | Not Assessed Routinely: An asset that is not routinely planned to be evaluated for National Register of Historic Places (NRHP) eligibility. |
| NCE | Non-Contributing Element of NHL/NRL/NRE District: Assets within the designated boundaries of a National Historic Landmark (NHL) or National Register of Historic Places (NRHP) listed or eligible property that have been evaluated and determined not to contribute to the historic significance of the property. |
| NEV | Not Yet Evaluated: An asset that has not been evaluated for National Register of Historic Places (NRHP) eligibility. |
| NHLC | Contributing Element of a NHL District: An asset that is identified as a contributing element of a larger property listed in the National Register of Historic Places (NRHP) and also designated a National Historic Landmark (NHL) by the Secretary of Interior. |
| NHLI | Individual National Historic Landmark: An asset that is individually listed in the National Register of Historic Places (NRHP) and also designated as a National Historic Landmark (NHL) by the Secretary of Interior. |
| NREC | Contributing Element of NRE District: An asset that is identified as a contributing element of a larger property or district determined eligible for inclusion in the National Register of Historic Places (NRHP). |
| NREI | Individual National Register Eligible: An individual asset that is determined to meet the National Register of Historic Places (NRHP) criteria of eligibility. |
| NRLC | Contributing Element of NRL District: An asset that is identified as a contributing element of a historic property listed in the National Register of Historic Places (NRHP). |
| NRLI | Individual National Register Listed: An individual asset that has been listed in the National Register of Historic Places (NRHP). |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: SiteStatus | |
|-------------------------------|---|
| ATTRIBUTE NAME: Res_Status | |
| CODED DOMAIN | DEFINITION |
| collection | Items have been collected from the site. |
| evaluated | The site has been evaluated. |
| excavated | The site has been excavated. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| partMitigate | The site is in partial mitigation. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| tested | The site has been tested. |
| undisturbed | The site is undisturbed (Surveyed - No Collections). |
| unknown | The site status is unknown. |

March 01, 2018

**Data Layer Specifications for:
Historic Landscape**

**United States Air Force
Environmental GIS Program**

Revision History

| Date: | Version: | Description of Revision: |
|------------|----------------------------|---|
| 12/12/2016 | HistoricLandscape_20161212 | <ul style="list-style-type: none"> Removed “the vertical datum shall be Mean Sea Level (MSL_Height),” from the Coordinate System section. |
| 10/4/2016 | HistoricLandscape_20161004 | <ul style="list-style-type: none"> Updated feature class code used for creating Resource ID when MCRAD data is not present. |
| 6/23/2016 | HistoricLandscape_20160623 | <ul style="list-style-type: none"> Updated “Positional Accuracy” section. |
| 3/10/2017 | HistoricLandscape_20170310 | <ul style="list-style-type: none"> Updated all Air Force Standard attribute fields to match August 6, 2015 GeoBase Data Dictionary. Updated “Positional Accuracy” section. Updated “For Empty Text Values” subsection. |
| 6/8/2017 | HistoricLandscape_20170608 | <ul style="list-style-type: none"> Updated the data layer update frequency in the “Sources and Source Selection” section. Updated “Data Steward POC” |
| 03/01/2018 | HistoricLandscape_20180301 | <ul style="list-style-type: none"> Updated the “Definition”, “Geometry/Topology”, “Positional Accuracy”, “Attributes”, “Business Tables,” and “Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Attribute Domain Tables” sections. |

This Data Layer Specification (DLS) defines geospatial data specifications for the HistoricLandscape_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

A geographic area (including both cultural and natural resources and the wildlife or domestic animals therein) associated with a historic event, activity, or person or exhibiting other cultural or aesthetic values. There are four general types of cultural landscapes, which are not mutually exclusive: historic sites, historic designed landscapes, historic vernacular landscapes, and ethnographic landscapes.

Data Layer Details

| | |
|--|---|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | HistoricLandscape_A |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalCulturalResources |
| Previous Layer Names: | HistoricLandscape |
| Geometry Type: | Polygon |
| Data Steward Organization (Program Area): | Program Area: Cultural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Cultural Resources Program SME |
| Representation: | <ul style="list-style-type: none"> • Historic landscape areas are represented as closed polygons depicting the outermost extent of the area. • Each individual historic landscape area is represented by a single area feature. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|---------------------------------|--|
| HQ AF/A7CAN | <ul style="list-style-type: none"> • AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007 • AFI32-7062, Comprehensive Planning, 27 June 2013 • AFI32-7064, Integrated Natural Resources Management, 18 November 2014 • AFI32-7065, Cultural Resources Management Program, 19 November 2014 |

| Implementing Program(s): | Driver(s): |
|--------------------------|--|
| | <ul style="list-style-type: none"> • AFH32-9007, Managing Air Force Real Property, 1 May 1999 • AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must not overlap. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Military Cultural Resources Analysis Database (MCRAD) is a relational data model that uses the functionality of Microsoft Access. It was created by Dr. Paul Green in collaboration with Dr. Brian Crane to resolve the issues that arise due to idiosyncratic formats of cultural resource data. MCRAD has been refined to support cultural resource business practices with DoD-wide input and has been adopted by the Deputy Under Secretary of Defense for Installations and Environment as a cultural resources geodata standard. MCRAD, if being used, should only be used to populate the business tables.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **6 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the HistoricLandscape_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the HistoricLandscape_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|----------------|--------------------|----------|
| | historicLandscapeIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |

Data Layer Specification – Historic Landscape

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|---|--------------------|----------|
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Historic Landscape. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Historic Landscape that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | SDSFIE |
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |

Data Layer Specification – Historic Landscape

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---------------------|---|---|--------------------|----------|
| | resourceID | Represents the Primary Key (ResourceID) for the feature in the MCRAD database. If the Resource_ID does not currently exist in MCRAD, use a concatenation of the installation siteID, the FDS code (CR), and the feature class code (YYYY) followed by a unique sequential six digit number (example: XXXX0001CRYYYY000001) to develop a unique identifier. This value is used to link to the feature class business table. See feature class Data Layer Specifications for applicable feature class code. | Feature Class Code for Historic Landscape is "HLSA". | String (50) | AF |
| D | landscapeType | Describes the type of landscape. | For a list of domain values, see LandscapeType in Appendix 1 | String (17) | AF |
| | historicLandscapeID | Reference to identification assigned by any agency. | | String (30) | SDSFIE |

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------------|--|--|--------------------|----------|
| D | nationalRegisterStatus | Specifies the historic status of a cultural resource feature with respect to placement on the National Register of Historic Places. Categorizes the feature as one of the Real Property Asset (RPA) Historic Status Code values as defined by the DUSD landE RPIR. | For a list of domain values, see HistoricStatusCode in Appendix 1. | String (5) | SDSFIE |
| | otherRegisterStatus | Specifies placement on the World Heritage List, or a cultural property inventory/registry of the host nation. | Status of site on any additional inventory, registry or list. | String (150) | SDSFIE |
| | lastInspectionDate | The date of the last inspection of the feature. Format for date is YYYYMMDD (i.e. September 15, 1994 = 19940915). MCRAD Register table. | | Integer (Long) | AF |
| | inspectionNotes | Any notes regarding the last inspection. | | String (255) | AF |
| | gisDataSource | The data source of the feature. | | String (255) | AF |
| | gisDataReliability | The reliability of the GIS data. | | String (255) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |

Data Layer Specification – Historic Landscape

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|---|--------------------|----------|
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |

Data Layer Specification – Historic Landscape

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |

Data Layer Specification – Historic Landscape

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. The business table for HistoricLandscape_A is:

| Table Name | Identifier | Source |
|------------------------|------------|----------------|
| cr_HistoricLandscape_A | ResourceID | MCRAD database |

Business Table Attributes for cr_HistoricLandscape_A

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|--|---|--------------------|
| | ResourceID | Primary Key in MCRAD Resources table. Used to link this business table to the appropriate feature class. | MCRAD Resources table | String (50) |
| | Res_Num | Smithsonian trinomial or equivalent. MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Res_Name | Site name recognized by agency. MCRAD Resources table. | MCRAD Resources table | String (100) |
| | Res_Grp | Type of resource (single, district, route, other aggregate groupings, etc.). MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Res_Desc | Short description of resource. MCRAD Resources table. | MCRAD Resources table | String (255) |
| | Condition | Overall condition, nature of disturbances, etc. MCRAD Resources table. | MCRAD Resources table | String (255) |
| D | Disturb | The percentage of the site that has been disturbed. MCRAD Resources table. | MCRAD Resources table For a list of domain values, see Disturbance in Appendix 1. | String (10) |
| | Disturb_Source | Describes the source of the disturbance. MCRAD Resources table. | MCRAD Resources table | String (250) |
| D | Threatened | Indicates whether resource is threatened. MCRAD Resources table. | MCRAD Resources table NA, no, TBD, yes | String (3) |
| | Threats | Describes the nature of threats to resource. MCRAD Resources table. | MCRAD Resources table | String (255) |
| D | Res_Status | Research status: Evaluated? Excavated? MCRAD Resources table. | MCRAD Resources table For a list of domain values, see SiteStatus in Appendix 1. | String (15) |

Data Layer Specification – Historic Landscape

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|------------------|--|---|--------------------|
| | Drainage | River drainage where resource is located. MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Physio_Prov | Name of physiographic province. MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Size_Notes | Any notes regarding the size of the feature. MCRAD Resources table. | MCRAD Resources table | String (255) |
| | Occ_Start | The occupation start year. MCRAD Resources table. | MCRAD Resources table | Double |
| | Occ_End | The occupation end year. MCRAD Resources table. | MCRAD Resources table | Double |
| D | Date_Meth | Method used to determine date. MCRAD Resources table. | MCRAD Resources table For a list of domain values, see DateMethod in Appendix 1. | String (20) |
| | Fac_Num | Air Force building or facility number (for historic buildings/structures on base property). MCRAD Resources table. | MCRAD Resources table | String (50) |
| D | Artifact_Density | Density of artifacts within the area. MCRAD Resources table. | MCRAD Resources table For a list of domain values, see ArtifactDensity in Appendix 1. | String (25) |
| | Rec_Date | Date resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Rec_Month | Month resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Rec_Day | Day resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Rec_Year | Year resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |

Data Layer Specification – Historic Landscape

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|---|---|--------------------|
| | Register_Name | Identifies the name of the register (e.g. World Heritage, Host Nation Register). MCRAD Register table. | MCRAD Register table | String (50) |
| | Op_Source | Source of opinion (Consultant, Agency). MCRAD Register table. | MCRAD Register table | String (50) |
| | Signif_Level | Significance level: International, National, Provincial, Local. MCRAD Register table. | MCRAD Register table / International, National, Provincial, Local | String (50) |
| | A | NRHP Criterion A. MCRAD Register table. | MCRAD Register table | String (3) |
| | B | NRHP Criterion B. MCRAD Register table. | MCRAD Register table | String (3) |
| | C | NRHP Criterion C. MCRAD Register table. | MCRAD Register table | String (3) |
| | D | NRHP Criterion D. MCRAD Register table. | MCRAD Register table | String (3) |
| | CritConsid | Describes the NRHP criteria considerations (Less than 50 years of age, Church, Relocated, etc). MCRAD Register table. | MCRAD Register table | String (255) |
| | I1 | Integrity of location. MRCAD Register table. | MCRAD Register table | String (50) |
| | I2 | Integrity of design. MRCAD Register table. | MCRAD Register table | String (50) |
| | I3 | Integrity of setting. MRCAD Register table. | MCRAD Register table | String (50) |
| | I4 | Integrity of materials. MRCAD Register table. | MCRAD Register table | String (50) |
| | I5 | Integrity of workmanship. MRCAD Register table. | MCRAD Register table | String (50) |
| | I6 | Integrity of feeling. MRCAD Register table. | MCRAD Register table | String (50) |
| | I7 | Integrity of association. MRCAD Register table. | MCRAD Register table | String (50) |
| | Sig_Per | The period of significance. MCRAD Register table. | MCRAD Register table | String (50) |

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|---|---|--------------------|
| | Themes | Applicable National Register themes. MCRAD Register table. | MCRAD Register table | String (255) |
| | Sensitivity | The potential effects (i.e. Sensitive to visual effects, Excavation, etc). MCRAD Register table. | MCRAD Register table | String (50) |
| | Date_Notes | Notes on the date for the NR opinion. MCRAD Register table. | MCRAD Register table | String (255) |
| | Recon_Year | The year the opinion needs to be reconsidered, such as when a property reaches 50 years of age. MCRAD Register table. | MCRAD Register table | Integer (Long) |
| | Opinion_Status | The status of the opinion, such as Official-Current, Official-Not Current, Unofficial, Advisory. MCRAD Register table. | MCRAD Register table / Official-Current, Official-Not Current, Unofficial, Advisory | String (50) |
| | Opinion_Date | The date in which NRHP status opinion was rendered. Format for date is YYYYMMDD (i.e. September 15, 1994 = 19940915). MCRAD Register table. | MCRAD Register table | Integer (Long) |
| | Notes | Notes. MCRAD Resources and Register tables. | MCRAD Resources and Register table | String (255) |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Cultural Resources, Historic Landscape

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: ArtifactDensity | |
|------------------------------------|--|
| ATTRIBUTE NAME: Artifact_Density | |
| CODED DOMAIN | DEFINITION |
| none | There were not any artifacts found at this site. |
| low1 | Artifact density is low at 1. Based on a density range between 1-10. |
| moderate2-5 | Artifact density range is moderate between 2-5. Based on a density range between 1-10. |
| high6-10 | Artifact density range is high between 6-10. Based on a density range between 1-10. |
| veryHigh10 | Artifact density is very high at greater than 10. Based on a density range between 1-10. |
| veryLow10 | Artifact density is very low at 1 - 10. Based on a density range between 1-1000. |
| low11-24 | Artifact density range is low between 11-24. Based on a density range between 1-1000. |
| moderate25-100 | Artifact density range is moderate between 25-100. Based on a density range between 1-1000. |
| high101-1000 | Artifact density range is high between 101-1000. Based on a density range between 1-1000. |
| veryHigh1000 | Artifact density is very high at greater than 1000. Based on a density range between 1-1000. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The artifact density of this location is unknown. |

| DOMAIN TABLE NAME: DateMethod | |
|-------------------------------|---|
| ATTRIBUTE NAME: Date_Meth | |
| CODED DOMAIN | DEFINITION |
| archaeomagnetic | Date method type is archaeomagnetic. |
| bioluminescence | Date method type is bioluminescence. |
| biosilicates | Date method type is biosilicates. |
| c14 | Date method type is C-14 radioactive. |
| ceramicDating | Date method type is ceramic dating. |
| chronometric | Date method type is absolute/chronometric. |
| NA | Not Applicable: No value exists. |
| none | A date method type was not used. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| projectilePt | The date method type is projectile point technique inference. |
| relative | The date method type is relative. |
| researchExp | The date method type is research/experience. |
| seriation | The date method type is seriation. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| thermolumin | The date method type is thermoluminescence. |
| treeRing | The date method type is tree ring. |

| DOMAIN TABLE NAME: Disturbance | |
|--------------------------------|---|
| ATTRIBUTE NAME: Disturb | |
| CODED DOMAIN | DEFINITION |
| destroyed | The feature has been destroyed. |
| majorImp | The feature has experienced major impact with 51-99% disturbed. |
| minorImp | The feature has experienced minor impact with 1-25% disturbed. |

Data Layer Specification – Historic Landscape

| DOMAIN TABLE NAME: Disturbance | |
|--------------------------------|---|
| ATTRIBUTE NAME: Disturb | |
| modimp | The feature has experienced moderate impact with 26-50% disturbed. |
| NA | Not Applicable: No value exists. |
| none | No disturbance has impacted the feature. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The disturbance level of the feature is unknown. |

| DOMAIN TABLE NAME: HistoricStatusCode | |
|--|--|
| ATTRIBUTE NAME: nationalRegisterStatus | |
| CODED DOMAIN | DEFINITION |
| DNE | Determined Not Eligible for Listing: An asset that has been evaluated using the National Register of Historic Places (NRHP) criteria and is determined not to meet the criteria of eligibility. |
| DNR | Designation Rescinded for NHLI/NHLC/NREI/NREC National Register Property: Determined by the Keeper of the National Register of Historic Places (NRHP) to no longer meet the criteria for listing in the NRHP. |
| ELPA | Eligible for the Purposes of a Program Alternative: An asset that is included within the scope of a program alternative developed and implemented pursuant to 36 CFR 800.14, Protection of Historic Properties. |
| NA | Not Applicable: No value exists. |
| NAR | Not Assessed Routinely: An asset that is not routinely planned to be evaluated for National Register of Historic Places (NRHP) eligibility. |
| NCE | Non-Contributing Element of NHL/NRL/NRE District: Assets within the designated boundaries of a National Historic Landmark (NHL) or National Register of Historic Places (NRHP) listed or eligible property that have been evaluated and determined not to contribute to the historic significance of the property. |
| NEV | Not Yet Evaluated: An asset that has not been evaluated for National Register of Historic Places (NRHP) eligibility. |
| NHLC | Contributing Element of a NHL District: An asset that is identified as a contributing element of a larger property listed in the National Register of Historic Places (NRHP) and also designated a National Historic Landmark (NHL) by the Secretary of Interior. |
| NHLI | Individual National Historic Landmark: An asset that is individually listed in the National Register of Historic Places (NRHP) and also designated as a National Historic Landmark (NHL) by the Secretary of Interior. |
| NREC | Contributing Element of NRE District: An asset that is identified as a contributing element of a larger property or district determined eligible for inclusion in the National Register of Historic Places (NRHP). |
| NREI | Individual National Register Eligible: An individual asset that is determined to meet the National Register of Historic Places (NRHP) criteria of eligibility. |
| NRLC | Contributing Element of NRL District: An asset that is identified as a contributing element of a historic property listed in the National Register of Historic Places (NRHP). |
| NRLI | Individual National Register Listed: An individual asset that has been listed in the National Register of Historic Places (NRHP). |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

Data Layer Specification – Historic Landscape

| DOMAIN TABLE NAME: LandscapeType | |
|----------------------------------|---|
| ATTRIBUTE NAME: LandscapeType | |
| CODED DOMAIN | DEFINITION |
| histDesigned | Historic Designed Landscapes |
| histEthnographic | Historic Ethnographic Landscapes |
| histSites | Historic Sites |
| histVernacular | Historic Vernacular Landscapes |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: SiteStatus | |
|-------------------------------|---|
| ATTRIBUTE NAME: Res_Status | |
| CODED DOMAIN | DEFINITION |
| collection | Items have been collected from the site. |
| evaluated | The site has been evaluated. |
| excavated | The site has been excavated. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| partMitigate | The site is in partial mitigation. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| tested | The site has been tested. |
| undisturbed | The site is undisturbed (Surveyed - No Collections). |
| unknown | The site status is unknown. |

**Data Layer Specifications for:
Historic Object**

**United States Air Force
Environmental GIS Program**

Revision History

| Date: | Version: | Description of Revision: |
|------------|-------------------------|--|
| 12/12/2016 | HistoricObject_20161212 | <ul style="list-style-type: none"> Removed “the vertical datum shall be Mean Sea Level (MSL_Height),” from the Coordinate System section. |
| 10/4/2016 | HistoricObject_20161004 | <ul style="list-style-type: none"> Updated feature class codes used for creating Resource ID when MCRAD data is not present. |
| 6/23/2016 | HistoricObject_20160623 | <ul style="list-style-type: none"> Added HistoricObject_L representation under “Data Layer Details” section. Added HistoricObject_L topology under “Geometry/ Topology” section. Added HistoricObject_L specific attribute fields under “Attributes” section. Added HistoricObject_L business table under “Business Tables” section. Updated HistoricObject_P representation under “Data Layer Details” section. Added HistoricObject_P topology under “Geometry/ Topology” section. Updated “Positional Accuracy” section. |
| 3/13/2017 | HistoricObject_20170310 | <ul style="list-style-type: none"> Updated all Air Force Standard attribute fields to match August 6, 2015 GeoBase Data Dictionary. Updated “Positional Accuracy” section. Updated “For Empty Text Values” subsection. Updated the “Representation” subsection of the “Data Layer Details” section. Updated the “Point Features” subsection of the “Geometry/Topology” section. |
| 6/8/2017 | HistoricObject_20170608 | <ul style="list-style-type: none"> Updated the data layer update frequency in the “Sources and Source Selection” section. Updated “Data Steward POC” |
| 03/01/2018 | HistoricObject_20180301 | <ul style="list-style-type: none"> Updated the “Definition”, “Geometry/Topology”, “Positional Accuracy”, “Attributes”, “Business Tables,” and “Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Attribute Domain Tables” sections. |

This Data Layer Specification (DLS) defines geospatial data specifications for the HistoricObject_A, HistoricObject_L, and HistoricObject_P data layers implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

Historically or culturally significant points of interest. These include constructed landmarks, markers, mileposts, interpretive sites, or statues, which are primarily artistic in nature or relatively small in scale and simply constructed. NOTE: This feature type is not to be used for representing a historic Building or Structure as defined by the Real Property group and included in the RPI. This feature type will house features from the merged SDSFIE v2.6 feature classes named Historic Feature and Historic Structure, unless those features have a Real Property record and are Building or Structure feature types.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | HistoricObject_A HistoricObject_L HistoricObject_P |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalCulturalResources |
| Previous Layer Names: | historic_feature_area historic_structure_area historic_feature_point historic_structure_point HistoricObject |
| Geometry Type: | Polygon, Line, Point |
| Data Steward Organization (Program Area): | Program Area: Cultural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Cultural Resources Program SME |
| Representation: | <ul style="list-style-type: none"> • All historic object locations shall represent the latitude, longitude location of that feature. • Historic object areas are represented as closed polygons depicting the outermost extent of the area. • Each individual historic object area is represented by a single area feature. • Historic objects will be represented as a continuous unbroken line. • All points developed from areas shall represent the centroid of the historic object area. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|--------------------------|--|
| HQ AF/A7CAN | <ul style="list-style-type: none"> • Historic Sites Act of 1935 • National Historic Preservation Act of 1966 • AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007 • AFI32-7062, Comprehensive Planning, 27 June 2013 • AFI32-7064, Integrated Natural Resources Management, 18 November 2014 • AFI32-7065, Cultural Resources Management Program, 19 November 2014 • AFH32-9007, Managing Air Force Real Property, 1 May 1999 • AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 |

Geometry/Topology

| |
|--|
| Polygon Features: |
| Polygons must not overlap. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |
| Line Features: |
| Lines must not self-overlap. |
| Line must not self-intersect. |
| Lines must be single part features. |
| Lines must be larger than cluster tolerance (.001 meter). |
| Point Features: |
| Points must be disjoint. |
| If a point represents a polygon feature, then the point must fall properly inside of the coinciding polygon. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be

performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Military Cultural Resources Analysis Database (MCRAD) is a relational data model that uses the functionality of Microsoft Access. It was created by Dr. Paul Green in collaboration with Dr. Brian Crane to resolve the issues that arise due to idiosyncratic formats of cultural resource data. MCRAD has been refined to support cultural resource business practices with DoD-wide input and has been adopted by the Deputy Under Secretary of Defense for Installations and Environment as a cultural resources geodata standard. MCRAD, if being used, should only be used to populate the business tables.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the HistoricObject_A, HistoricObject_L, and HistoricObject_P layers will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the HistoricObject_A, HistoricObject_L, and HistoricObject_P data layers.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|--|--------------------|----------|
| | historicObjectIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Historic Object. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Historic Object that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize (<i>Polygon geometry</i>) | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM (<i>Polygon geometry</i>) | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize (<i>Polygon geometry</i>) | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM (<i>Polygon geometry</i>) | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude (<i>Polygon geometry</i>) | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |

Data Layer Specification – Historic Object

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|-----------------------------------|--------------------|----------|
| | longitude <i>(Polygon geometry)</i> | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid <i>(Polygon geometry)</i> | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | lengthSize <i>(Line geometry)</i> | The value of the measured length. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | lengthSizeUOM <i>(Line geometry)</i> | The unit of measure for the calculated length. | foot | String (25) | AF |
| | latitudeFrom <i>(Line geometry)</i> | The latitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | latitudeTo <i>(Line geometry)</i> | The latitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeFrom <i>(Line geometry)</i> | The longitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |

Data Layer Specification – Historic Object

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|---|-----------------|--------------------|----------|
| | longitudeTo <i>(Line geometry)</i> | The longitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | elevationFrom <i>(Line geometry)</i> | The elevation component of the beginning (upstream/upgradient) coordinate point in feet. | | Double | AF |
| | elevationTo <i>(Line geometry)</i> | The elevation component of the ending (downstream/down gradient) coordinate point in feet. | | Double | AF |
| D | elevationUOM <i>(Line geometry)</i> | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | latitude <i>(Point geometry)</i> | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude <i>(Point geometry)</i> | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | MGRS <i>(Point geometry)</i> | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation <i>(Point geometry)</i> | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM <i>(Point geometry)</i> | The unit of measure for elevation dimension. | foot | String (25) | AF |

Data Layer Specification – Historic Object

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------------|--|--|--------------------|----------|
| | resourceID | <p>Represents the Primary Key (ResourceID) for the feature in the MCRAD database. If the Resource_ID does not currently exist in MCRAD, use a concatenation of the installation siteID, the FDS code (CR), and the feature class code (YYYY) followed by a unique sequential six digit number (example: XXXX0001CRYYYY000001) to develop a unique identifier. This value is used to link to the feature class business table. See feature class Data Layer Specifications for applicable feature class code.</p> | <p>Feature Class Codes for Historic Object: Area – “HOBA” Line – “HOBL” Point – “HOBP”.</p> | String (50) | AF |
| D | nationalRegisterStatus | <p>Specifies the historic status of a cultural resource feature with respect to placement on the National Register of Historic Places. Categorizes the feature as one of the Real Property Asset (RPA) Historic Status Code values as defined by the DUSD landE RPIR.</p> | <p>For a list of domain values, see HistoricStatusCode in Appendix 1.</p> | String (5) | SDSFIE |

Data Layer Specification – Historic Object

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---------------------|---|--|--------------------|----------|
| | otherRegisterStatus | Specifies placement on the World Heritage List, or a cultural property inventory/registry of the host nation. | Status of site on any additional inventory, registry or list. | String (150) | SDSFIE |
| | lastInspectionDate | The date of the last inspection of the feature. Format for date is YYYYMMDD (i.e. September 15, 1994 = 19940915). MCRAD Register table. | | Integer (Long) | AF |
| | inspectionNotes | Any notes regarding the last inspection. | | String (255) | AF |
| | gisDataSource | The data source of the feature. | | String (255) | AF |
| | gisDataReliability | The reliability of the GIS data. | | String (255) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |

Data Layer Specification – Historic Object

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |

Data Layer Specification – Historic Object

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |

Data Layer Specification – Historic Object

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business tables will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. The business tables for HistoricObject_A, HistoricObject_L, and HistoricObject_P are:

| Table Name | Identifier | Source |
|---------------------|------------|----------------|
| cr_HistoricObject_A | ResourceID | MCRAD database |
| cr_HistoricObject_L | ResourceID | MCRAD database |
| cr_HistoricObject_P | ResourceID | MCRAD database |

Business Table Attributes for cr_HistoricObject_A, cr_HistoricObject_L and cr_HistoricObject_P

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|--|--|--------------------|
| | ResourceID | Primary Key in MCRAD Resources table. Used to link this business table to the appropriate feature class. | MCRAD Resources table | String (50) |
| | Res_Num | Smithsonian trinomial or equivalent. MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Res_Name | Site name recognized by agency. MCRAD Resources table. | MCRAD Resources table | String (100) |
| | Res_Grp | Type of resource (single, district, route, other aggregate groupings, etc.). MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Res_Type | Archaeological site, building, structure, object, etc. MCRAD Resources table. | MCRAD Resources table | String (155) |
| | Res_Desc | Short description of resource. MCRAD Resources table. | MCRAD Resources table | String (255) |
| | Condition | Overall condition, nature of disturbances, etc. MCRAD Resources table. | MCRAD Resources table | String (255) |
| D | Threatened | Indicates whether resource is threatened. MCRAD Resources table. | MCRAD Resources table NA, no, TBD, yes | String (3) |
| | Threats | Describes the nature of threats to resource. MCRAD Resources table. | MCRAD Resources table | String (255) |
| D | Res_Status | Research status: Evaluated? Excavated? MCRAD Resources table. | MCRAD Resources table For a list of domain values, see SiteStatus in Appendix 1. | String (15) |
| | Drainage | River drainage where resource is located. MCRAD Resources table. | MCRAD Resources table | String (50) |

Data Layer Specification – Historic Object

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|--|--|--------------------|
| | Physio_Prov | Name of physiographic province. MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Size_Notes | Any notes regarding the size of the feature. MCRAD Resources table. | MCRAD Resources table | String (255) |
| | Occ_Start | The occupation start year. MCRAD Resources table. | MCRAD Resources table | Double |
| | Occ_End | The occupation end year. MCRAD Resources table. | MCRAD Resources table | Double |
| D | Date_Meth | Method used to determine date. MCRAD Resources table. | MCRAD Resources table For a list of domain values, see DateMethod in Appendix 1. | String (20) |
| | Fac_Num | Air Force building or facility number (for historic buildings/structures on base property). MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Rec_Date | Date resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Rec_Month | Month resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Rec_Day | Day resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Rec_Year | Year resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Register_Name | Identifies the name of the register (e.g. World Heritage, Host Nation Register). MCRAD Register table. | MCRAD Register table | String (50) |
| | Op_Source | Source of opinion (Consultant, Agency). MCRAD Register table. | MCRAD Register table | String (50) |

Data Layer Specification – Historic Object

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|---|---|--------------------|
| | Signif_Level | Significance level: International, National, Provincial, Local. MCRAD Register table. | MCRAD Register table / International, National, Provincial, Local | String (50) |
| | A | NRHP Criterion A. MCRAD Register table. | MCRAD Register table | String (3) |
| | B | NRHP Criterion B. MCRAD Register table. | MCRAD Register table | String (3) |
| | C | NRHP Criterion C. MCRAD Register table. | MCRAD Register table | String (3) |
| | D | NRHP Criterion D. MCRAD Register table. | MCRAD Register table | String (3) |
| | CritConsid | Describes the NRHP criteria considerations (Less than 50 years of age, Church, Relocated, etc). MCRAD Register table. | MCRAD Register table | String (255) |
| | I1 | Integrity of location. MRCAD Register table. | MCRAD Register table | String (50) |
| | I2 | Integrity of design. MRCAD Register table. | MCRAD Register table | String (50) |
| | I3 | Integrity of setting. MRCAD Register table. | MCRAD Register table | String (50) |
| | I4 | Integrity of materials. MRCAD Register table. | MCRAD Register table | String (50) |
| | I5 | Integrity of workmanship. MRCAD Register table. | MCRAD Register table | String (50) |
| | I6 | Integrity of feeling. MRCAD Register table. | MCRAD Register table | String (50) |
| | I7 | Integrity of association. MRCAD Register table. | MCRAD Register table | String (50) |
| | Sig_Per | The period of significance. MCRAD Register table. | MCRAD Register table | String (50) |
| | Themes | Applicable National Register themes. MCRAD Register table. | MCRAD Register table | String (255) |
| | Sensitivity | The potential effects (i.e. Sensitive to visual effects, Excavation, etc). MCRAD Register table. | MCRAD Register table | String (50) |

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|---|---|--------------------|
| | Date_Notes | Notes on the date for the NR opinion. MCRAD Register table. | MCRAD Register table | String (255) |
| | Recon_Year | The year the opinion needs to be reconsidered, such as when a property reaches 50 years of age. MCRAD Register table. | MCRAD Register table | Integer (Long) |
| | Opinion_Status | The status of the opinion, such as Official-Current, Official-Not Current, Unofficial, Advisory. MCRAD Register table. | MCRAD Register table / Official-Current, Official-Not Current, Unofficial, Advisory | String (50) |
| | Opinion_Date | The date in which NRHP status opinion was rendered. Format for date is YYYYMMDD (i.e. September 15, 1994 = 19940915). MCRAD Register table. | MCRAD Register table | Integer (Long) |
| | Notes | Notes. MCRAD Resources and Register tables. | MCRAD Resources and Register table | String (255) |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Cultural Resources, Historic Object

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: DateMethod | |
|-------------------------------|---|
| ATTRIBUTE NAME: Date_Meth | |
| CODED DOMAIN | DEFINITION |
| archaeomagnetic | Date method type is archaeomagnetic. |
| bioluminescence | Date method type is bioluminescence. |
| biosilicates | Date method type is biosilicates. |
| c14 | Date method type is C-14 radioactive. |
| ceramicDating | Date method type is ceramic dating. |
| chronometric | Date method type is absolute/chronometric. |
| NA | Not Applicable: No value exists. |
| none | A date method type was not used. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| projectilePt | The date method type is projectile point technique inference. |
| relative | The data method type is relative. |
| researchExp | The date method type is research/experience. |
| seriation | The date method type is seriation. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| thermolumin | The date method type is thermoluminescence. |
| treeRing | The date method type is tree ring. |

| DOMAIN TABLE NAME: HistoricStatusCode | |
|--|--|
| ATTRIBUTE NAME: nationalRegisterStatus | |
| CODED DOMAIN | DEFINITION |
| DNE | Determined Not Eligible for Listing: An asset that has been evaluated using the National Register of Historic Places (NRHP) criteria and is determined not to meet the criteria of eligibility. |
| DNR | Designation Rescinded for NHLI/NHLC/NREI/NREC National Register Property: Determined by the Keeper of the National Register of Historic Places (NRHP) to no longer meet the criteria for listing in the NRHP. |
| ELPA | Eligible for the Purposes of a Program Alternative: An asset that is included within the scope of a program alternative developed and implemented pursuant to 36 CFR 800.14, Protection of Historic Properties. |
| NA | Not Applicable: No value exists. |
| NAR | Not Assessed Routinely: An asset that is not routinely planned to be evaluated for National Register of Historic Places (NRHP) eligibility. |
| NCE | Non-Contributing Element of NHL/NRL/NRE District: Assets within the designated boundaries of a National Historic Landmark (NHL) or National Register of Historic Places (NRHP) listed or eligible property that have been evaluated and determined not to contribute to the historic significance of the property. |
| NEV | Not Yet Evaluated: An asset that has not been evaluated for National Register of Historic Places (NRHP) eligibility. |
| NHLC | Contributing Element of a NHL District: An asset that is identified as a contributing element of a larger property listed in the National Register of Historic Places (NRHP) and also designated a National Historic Landmark (NHL) by the Secretary of Interior. |
| NHLI | Individual National Historic Landmark: An asset that is individually listed in the National Register of Historic Places (NRHP) and also designated as a National Historic Landmark (NHL) by the Secretary of Interior. |

Data Layer Specification – Historic Object

| DOMAIN TABLE NAME: HistoricStatusCode | |
|--|--|
| ATTRIBUTE NAME: nationalRegisterStatus | |
| NREC | Contributing Element of NRE District: An asset that is identified as a contributing element of a larger property or district determined eligible for inclusion in the National Register of Historic Places (NRHP). |
| NREI | Individual National Register Eligible: An individual asset that is determined to meet the National Register of Historic Places (NRHP) criteria of eligibility. |
| NRLC | Contributing Element of NRL District: An asset that is identified as a contributing element of a historic property listed in the National Register of Historic Places (NRHP). |
| NRLI | Individual National Register Listed: An individual asset that has been listed in the National Register of Historic Places (NRHP). |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: SiteStatus | |
|-------------------------------|---|
| ATTRIBUTE NAME: Res_Status | |
| CODED DOMAIN | DEFINITION |
| collection | Items have been collected from the site. |
| evaluated | The site has been evaluated. |
| excavated | The site has been excavated. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| partMitigate | The site is in partial mitigation. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| tested | The site has been tested. |
| undisturbed | The site is undisturbed (Surveyed - No Collections). |
| unknown | The site status is unknown. |

This Data Layer Specification (DLS) defines geospatial data specifications for the NativeAffiliation_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

Locations of current or prior native use, occupation, or interest, to assist in consultation. This may include but is not limited to: reservations, treaty lands, trust lands, ceded lands, lands identified during consultation, and areas of customary and traditional use.

Data Layer Details

| | |
|--|---|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | NativeAffiliation_A |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalCulturalResources |
| Previous Layer Names: | NativeAffiliation |
| Geometry Type: | Polygon |
| Data Steward Organization (Program Area): | Program Area: Cultural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Cultural Resources Program SME |
| Representation: | <ul style="list-style-type: none"> • Native affiliation areas are represented as closed polygons depicting the outermost extent of the area. • Each individual native affiliation area is represented by a single area feature. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|---------------------------------|--|
| HQ AF/A7CAN | <ul style="list-style-type: none"> • AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007 • AFI32-7062, Comprehensive Planning, 27 June 2013 • AFI32-7064, Integrated Natural Resources Management, 18 November 2014 • AFI32-7065, Cultural Resources Management Program, 19 November 2014 • AFH32-9007, Managing Air Force Real Property, 1 May 1999 • AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 |

| Implementing Program(s): | Driver(s): |

| | <ul style="list-style-type: none"> • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Military Cultural Resources Analysis Database (MCRAD) is a relational data model that uses the functionality of Microsoft Access. It was created by Dr. Paul Green in collaboration with Dr. Brian Crane to resolve the issues that arise due to idiosyncratic formats of cultural resource data. MCRAD has been refined to support cultural resource business practices with DoD-wide input and has been adopted by the Deputy Under Secretary of Defense for Installations and Environment as a cultural resources geodata standard. MCRAD, if being used, should only be used to populate the business tables.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **12 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the NativeAffiliation_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the NativeAffiliation_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|--|--------------------|----------|
| | nativeAffiliationIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Native Affiliation. | String (80) | SDSFIE |

Data Layer Specification – Native Affiliation

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|---|--------------------|----------|
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Native Affiliation that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |

Data Layer Specification – Native Affiliation

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------|---|--|--------------------|----------|
| | affiliationID | Represents the Primary Key (AffiliationID) for the feature in the MCRAD database. If the Affiliation_ID does not currently exist in MCRAD, use a concatenation of the installation siteID, the FDS code (CR), and the feature class code (YYYY) followed by a unique sequential six digit number (example: XXXX0001CRYYYY000001) to develop a unique identifier. This value is used to link to the feature class business table. See feature class Data Layer Specifications for applicable feature class code. | Feature Class Code for Native Affiliation is “NAFA”. | String (50) | AF |
| | gisDataSource | The data source of the feature. | | String (255) | AF |
| | gisDataReliability | The reliability of the GIS data. | | String (255) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |

Data Layer Specification – Native Affiliation

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |

Data Layer Specification – Native Affiliation

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |

Data Layer Specification – Native Affiliation

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. The business table for NativeAffiliation_A is:

| Table Name | Identifier | Source |
|------------------------|---------------|----------------|
| cr_NativeAffiliation_A | AffiliationID | MCRAD database |

Business Table Attributes for cr_NativeAffiliation_A

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|-------------------------|---|--------------------------------|--------------------|
| | AffiliationID | Primary Key in MCRAD Affiliation and Native_Affiliation tables. Relates back to NativeAffiliation_A data layer attribute table. | MCRAD Native_Affiliation table | String (50) |
| | Cultural_Affiliation | Federally recognized tribe, Alaska Native Village, or Native Hawaiian organization. MCRAD Native_Affiliation table. | MCRAD Native_Affiliation table | String (50) |
| | Affiliation_Description | Description of the association. MCRAD Native_Affiliation table. | MCRAD Native_Affiliation table | String (50) |
| | Data_Source | Source of the information for the affiliation cited. MCRAD Native_Affiliation table. | MCRAD Native_Affiliation table | String (50) |
| | Notes | Notes. MCRAD Resources and Register tables. | MCRAD Native_Affiliation table | String (255) |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

Data Layer Specification – Native Affiliation

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Geometry/Topology

| |
|--|
| Polygon Features: |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |
| Line Features: |
| Lines must not self-overlap. |
| Lines must not self-intersect. |
| Lines must be single part features. |
| Lines must be larger than cluster tolerance (.001 meter). |
| Point Features: |
| If a point represents a polygon feature, then the point must fall properly inside of the coinciding polygon. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Military Cultural Resources Analysis Database (MCRAD) is a relational data model that uses the functionality of Microsoft Access. It was created by Dr. Paul Green in collaboration with Dr. Brian Crane to resolve the issues that arise due to idiosyncratic formats of cultural resource data. MCRAD has been refined to support cultural resource business practices with DoD-wide input and has been adopted by the Deputy Under Secretary of Defense for Installations and Environment as a cultural resources geodata standard. MCRAD, if being used, should only be used to populate the business tables.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the SacredSite_A, SacredSite_L, and SacredSite_P layers will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the SacredSite_A, SacredSite_L, and SacredSite_P data layers.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|--|--------------------|----------|
| | sacredSiteIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Sacred Site. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Sacred Site that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize (<i>Polygon geometry</i>) | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM (<i>Polygon geometry</i>) | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize (<i>Polygon geometry</i>) | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM (<i>Polygon geometry</i>) | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude (<i>Polygon geometry</i>) | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |

Data Layer Specification – Sacred Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|-----------------------------------|--------------------|----------|
| | longitude <i>(Polygon geometry)</i> | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid <i>(Polygon geometry)</i> | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | lengthSize <i>(Line geometry)</i> | The value of the measured length. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | lengthSizeUOM <i>(Line geometry)</i> | The unit of measure for the calculated length. | foot | String (25) | AF |
| | latitudeFrom <i>(Line geometry)</i> | The latitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | latitudeTo <i>(Line geometry)</i> | The latitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeFrom <i>(Line geometry)</i> | The longitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |

Data Layer Specification – Sacred Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|---|-----------------|--------------------|----------|
| | longitudeTo <i>(Line geometry)</i> | The longitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | elevationFrom <i>(Line geometry)</i> | The elevation component of the beginning (upstream/upgradient) coordinate point in feet. | | Double | AF |
| | elevationTo <i>(Line geometry)</i> | The elevation component of the ending (downstream/down gradient) coordinate point in feet. | | Double | AF |
| D | elevationUOM <i>(Line geometry)</i> | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | latitude <i>(Point geometry)</i> | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude <i>(Point geometry)</i> | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | MGRS <i>(Point geometry)</i> | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation <i>(Point geometry)</i> | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM <i>(Point geometry)</i> | The unit of measure for elevation dimension. | foot | String (25) | AF |

Data Layer Specification – Sacred Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------------|---|---|--------------------|----------|
| | resourceID | Represents the Primary Key (ResourceID) for the feature in the MCRAD database. If the Resource_ID does not currently exist in MCRAD, use a concatenation of the installation siteID, the FDS code (CR), and the feature class code (YYYY) followed by a unique sequential six digit number (example: XXXX0001CRYYYY000001) to develop a unique identifier. This value is used to link to the feature class business table. See feature class Data Layer Specifications for applicable feature class code. | Feature Class Codes for Sacred Site: Area – “SSTA” Line – “SSTL” Point – “SSTP”. | String (50) | AF |
| | sacredSiteID | Reference to identification assigned by any agency. | | String (30) | SDSFIE |
| D | nationalRegisterStatus | Specifies the historic status of a cultural resource feature with respect to placement on the National Register of Historic Places. Categorizes the feature as one of the Real Property Asset (RPA) Historic Status Code values as defined by the DUSD landE RPIR. | For a list of domain values, see HistoricStatusCode in Appendix 1. | String (5) | SDSFIE |

Data Layer Specification – Sacred Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---------------------|---|--|--------------------|----------|
| | otherRegisterStatus | Specifies placement on the World Heritage List, or a cultural property inventory/registry of the host nation. | Status of site on any additional inventory, registry or list. | String (150) | SDSFIE |
| | lastInspectionDate | The date of the last inspection of the feature. Format for date is YYYYMMDD (i.e. September 15, 1994 = 19940915). MCRAD Register table. | | Integer (Long) | AF |
| | inspectionNotes | Any notes regarding the last inspection. | | String (255) | AF |
| | gisDataSource | The data source of the feature. | | String (255) | AF |
| | gisDataReliability | The reliability of the GIS data. | | String (255) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard . | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |

Data Layer Specification – Sacred Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business tables will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. The business tables for SacredSite_A, SacredSite_L, and SacredSite_P are:

| Table Name | Identifier | Source |
|-----------------|------------|----------------|
| cr_SacredSite_A | ResourceID | MCRAD database |
| cr_SacredSite_L | ResourceID | MCRAD database |
| cr_SacredSite_P | ResourceID | MCRAD database |

Business Table Attributes for cr_SacredSite_A, cr_SacredSite_L and cr_SacredSite_P

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|--|---|--------------------|
| | ResourceID | Primary Key in MCRAD Resources table. Used to link this business table to the appropriate feature class. | MCRAD Resources table | String (50) |
| | Res_Num | Smithsonian trinomial or equivalent. MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Res_Name | Site name recognized by agency. MCRAD Resources table. | MCRAD Resources table | String (100) |
| | Res_Grp | Type of resource (single, district, route, other aggregate groupings, etc.). MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Res_Type | Archaeological site, building, structure, object, etc. MCRAD Resources table. | MCRAD Resources table | String (155) |
| | Res_Desc | Short description of resource. MCRAD Resources table. | MCRAD Resources table | String (255) |
| | Condition | Overall condition, nature of disturbances, etc. MCRAD Resources table. | MCRAD Resources table | String (255) |
| D | Disturb | The percentage of the site that has been disturbed. MCRAD Resources table. | MCRAD Resources table For a list of domain values, see Disturbance in Appendix 1. | String (10) |
| | Disturb_Source | Describes the source of the disturbance. MCRAD Resources table. | MCRAD Resources table | String (250) |
| D | Threatened | Indicates whether resource is threatened. MCRAD Resources table. | MCRAD Resources table NA, no, TBD, yes | String (3) |
| | Threats | Describes the nature of threats to resource. MCRAD Resources table. | MCRAD Resources table | String (255) |

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|------------------|--|---|--------------------|
| D | Res_Status | Research status: Evaluated? Excavated? MCRAD Resources table. | MCRAD Resources table For a list of domain values, see SiteStatus in Appendix 1. | String (15) |
| | Drainage | River drainage where resource is located. MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Physio_Prov | Name of physiographic province. MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Size_Notes | Any notes regarding the size of the feature. MCRAD Resources table. | MCRAD Resources table | String (255) |
| | Occ_Start | The occupation start year. MCRAD Resources table. | MCRAD Resources table | Double |
| | Occ_End | The occupation end year. MCRAD Resources table. | MCRAD Resources table | Double |
| D | Date_Meth | Method used to determine date. MCRAD Resources table. | MCRAD Resources table For a list of domain values, see DateMethod in Appendix 1. | String (20) |
| | Fac_Num | Air Force building or facility number (for historic buildings/structures on base property). MCRAD Resources table. | MCRAD Resources table | String (50) |
| D | Artifact_Density | Density of artifacts within the area. MCRAD Resources table. | MCRAD Resources table For a list of domain values, see ArtifactDensity in Appendix 1. | String (25) |
| | Rec_Date | Date resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Rec_Month | Month resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Rec_Day | Day resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Rec_Year | Year resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|---|---|--------------------|
| | Register_Name | Identifies the name of the register (e.g. World Heritage, Host Nation Register). MCRAD Register table. | MCRAD Register table | String (50) |
| | Op_Source | Source of opinion (Consultant, Agency). MCRAD Register table. | MCRAD Register table | String (50) |
| | Signif_Level | Significance level: International, National, Provincial, Local. MCRAD Register table. | MCRAD Register table / International, National, Provincial, Local | String (50) |
| | A | NRHP Criterion A. MCRAD Register table. | MCRAD Register table | String (3) |
| | B | NRHP Criterion B. MCRAD Register table. | MCRAD Register table | String (3) |
| | C | NRHP Criterion C. MCRAD Register table. | MCRAD Register table | String (3) |
| | D | NRHP Criterion D. MCRAD Register table. | MCRAD Register table | String (3) |
| | CritConsid | Describes the NRHP criteria considerations (Less than 50 years of age, Church, Relocated, etc). MCRAD Register table. | MCRAD Register table | String (255) |
| | I1 | Integrity of location. MRCAD Register table. | MCRAD Register table | String (50) |
| | I2 | Integrity of design. MRCAD Register table. | MCRAD Register table | String (50) |
| | I3 | Integrity of setting. MRCAD Register table. | MCRAD Register table | String (50) |
| | I4 | Integrity of materials. MRCAD Register table. | MCRAD Register table | String (50) |
| | I5 | Integrity of workmanship. MRCAD Register table. | MCRAD Register table | String (50) |
| | I6 | Integrity of feeling. MRCAD Register table. | MCRAD Register table | String (50) |
| | I7 | Integrity of association. MRCAD Register table. | MCRAD Register table | String (50) |
| | Sig_Per | The period of significance. MCRAD Register table. | MCRAD Register table | String (50) |

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|---|---|--------------------|
| | Themes | Applicable National Register themes. MCRAD Register table. | MCRAD Register table | String (255) |
| | Sensitivity | The potential effects (i.e. Sensitive to visual effects, Excavation, etc). MCRAD Register table. | MCRAD Register table | String (50) |
| | Date_Notes | Notes on the date for the NR opinion. MCRAD Register table. | MCRAD Register table | String (255) |
| | Recon_Year | The year the opinion needs to be reconsidered, such as when a property reaches 50 years of age. MCRAD Register table. | MCRAD Register table | Integer (Long) |
| | Opinion_Status | The status of the opinion, such as Official-Current, Official-Not Current, Unofficial, Advisory. MCRAD Register table. | MCRAD Register table / Official-Current, Official-Not Current, Unofficial, Advisory | String (50) |
| | Opinion_Date | The date in which NRHP status opinion was rendered. Format for date is YYYYMMDD (i.e. September 15, 1994 = 19940915). MCRAD Register table. | MCRAD Register table | Integer (Long) |
| | Notes | Notes. MCRAD Resources and Register tables. | MCRAD Resources and Register table | String (255) |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Cultural Resources, Sacred Site

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: ArtifactDensity | |
|------------------------------------|--|
| ATTRIBUTE NAME: Artifact_Density | |
| CODED DOMAIN | DEFINITION |
| none | There were not any artifacts found at this site. |
| low1 | Artifact density is low at 1. Based on a density range between 1-10. |
| moderate2-5 | Artifact density range is moderate between 2-5. Based on a density range between 1-10. |
| high6-10 | Artifact density range is high between 6-10. Based on a density range between 1-10. |
| veryHigh10 | Artifact density is very high at greater than 10. Based on a density range between 1-10. |
| veryLow10 | Artifact density is very low at 1 - 10. Based on a density range between 1-1000. |
| low11-24 | Artifact density range is low between 11-24. Based on a density range between 1-1000. |
| moderate25-100 | Artifact density range is moderate between 25-100. Based on a density range between 1-1000. |
| high101-1000 | Artifact density range is high between 101-1000. Based on a density range between 1-1000. |
| veryHigh1000 | Artifact density is very high at greater than 1000. Based on a density range between 1-1000. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The artifact density of this location is unknown. |

| DOMAIN TABLE NAME: DateMethod | |
|-------------------------------|---|
| ATTRIBUTE NAME: Date_Meth | |
| CODED DOMAIN | DEFINITION |
| archaeomagnetic | Date method type is archaeomagnetic. |
| bioluminescence | Date method type is bioluminescence. |
| biosilicates | Date method type is biosilicates. |
| c14 | Date method type is C-14 radioactive. |
| ceramicDating | Date method type is ceramic dating. |
| chronometric | Date method type is absolute/chronometric. |
| NA | Not Applicable: No value exists. |
| none | A date method type was not used. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| projectilePt | The date method type is projectile point technique inference. |
| relative | The date method type is relative. |
| researchExp | The date method type is research/experience. |
| seriation | The date method type is seriation. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| thermolumin | The date method type is thermoluminescence. |
| treeRing | The date method type is tree ring. |

Data Layer Specification – Sacred Site

| DOMAIN TABLE NAME: Disturbance | |
|--------------------------------|---|
| ATTRIBUTE NAME: Disturb | |
| CODED DOMAIN | DEFINITION |
| destroyed | The feature has been destroyed. |
| majorImp | The feature has experienced major impact with 51-99% disturbed. |
| minorImp | The feature has experienced minor impact with 1-25% disturbed. |
| modImp | The feature has experienced moderate impact with 26-50% disturbed. |
| NA | Not Applicable: No value exists. |
| none | No disturbance has impacted the feature. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The disturbance level of the feature is unknown. |

| DOMAIN TABLE NAME: HistoricStatusCode | |
|--|--|
| ATTRIBUTE NAME: nationalRegisterStatus | |
| CODED DOMAIN | DEFINITION |
| DNE | Determined Not Eligible for Listing: An asset that has been evaluated using the National Register of Historic Places (NRHP) criteria and is determined not to meet the criteria of eligibility. |
| DNR | Designation Rescinded for NHLI/NHLC/NREI/NREC National Register Property: Determined by the Keeper of the National Register of Historic Places (NRHP) to no longer meet the criteria for listing in the NRHP. |
| ELPA | Eligible for the Purposes of a Program Alternative: An asset that is included within the scope of a program alternative developed and implemented pursuant to 36 CFR 800.14, Protection of Historic Properties. |
| NA | Not Applicable: No value exists. |
| NAR | Not Assessed Routinely: An asset that is not routinely planned to be evaluated for National Register of Historic Places (NRHP) eligibility. |
| NCE | Non-Contributing Element of NHL/NRL/NRE District: Assets within the designated boundaries of a National Historic Landmark (NHL) or National Register of Historic Places (NRHP) listed or eligible property that have been evaluated and determined not to contribute to the historic significance of the property. |
| NEV | Not Yet Evaluated: An asset that has not been evaluated for National Register of Historic Places (NRHP) eligibility. |
| NHLC | Contributing Element of a NHL District: An asset that is identified as a contributing element of a larger property listed in the National Register of Historic Places (NRHP) and also designated a National Historic Landmark (NHL) by the Secretary of Interior. |
| NHLI | Individual National Historic Landmark: An asset that is individually listed in the National Register of Historic Places (NRHP) and also designated as a National Historic Landmark (NHL) by the Secretary of Interior. |
| NREC | Contributing Element of NRE District: An asset that is identified as a contributing element of a larger property or district determined eligible for inclusion in the National Register of Historic Places (NRHP). |
| NREI | Individual National Register Eligible: An individual asset that is determined to meet the National Register of Historic Places (NRHP) criteria of eligibility. |
| NRLC | Contributing Element of NRL District: An asset that is identified as a contributing element of a historic property listed in the National Register of Historic Places (NRHP). |
| NRLI | Individual National Register Listed: An individual asset that has been listed in the National Register of Historic Places (NRHP). |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: SiteStatus | |
|-------------------------------|---|
| ATTRIBUTE NAME: Res_Status | |
| CODED DOMAIN | DEFINITION |
| collection | Items have been collected from the site. |
| evaluated | The site has been evaluated. |
| excavated | The site has been excavated. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| partMitigate | The site is in partial mitigation. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| tested | The site has been tested. |
| undisturbed | The site is undisturbed (Surveyed - No Collections). |
| unknown | The site status is unknown. |

**Data Layer Specifications for:
Traditional Cultural
Resource**

**United States Air Force
Environmental GIS Program**

Revision History

| Date: | Version: | Description of Revision: |
|------------|--------------------------------------|--|
| 12/12/2016 | TraditionalCulturalResource_20161212 | <ul style="list-style-type: none"> Removed “the vertical datum shall be Mean Sea Level (MSL_Height),” from the Coordinate System section. |
| 10/4/2016 | TraditionalCulturalResource_20161004 | <ul style="list-style-type: none"> Updated feature class codes used for creating Resource ID when MCRAD data is not present. |
| 6/23/2016 | TraditionalCulturalResource_20160623 | <ul style="list-style-type: none"> Added TraditionalCulRes_P representation under “Data Layer Details” section. Updated “Positional Accuracy” section. |
| 3/13/2017 | TraditionalCulturalResource_20170310 | <ul style="list-style-type: none"> Updated all Air Force Standard attribute fields to match August 6, 2015 GeoBase Data Dictionary. Updated “Positional Accuracy” section. Updated “For Empty Text Values” subsection. Updated the “Representation” subsection of the “Data Layer Details” section. Updated the “Point Features” subsection of the “Geometry/Topology” section. |
| 6/8/2017 | TraditionalCulturalResource_20170608 | <ul style="list-style-type: none"> Updated the data layer update frequency in the “Sources and Source Selection” section. Updated “Data Steward POC” |
| 03/01/2018 | TraditionalCulturalResource_20180301 | <ul style="list-style-type: none"> Updated the “Definition”, “Geometry/Topology”, “Positional Accuracy”, “Attributes”, “Business Tables,” and “Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Attribute Domain Tables” sections. |

This Data Layer Specification (DLS) defines geospatial data specifications for the TraditionalCulRes_A, TraditionalCulRes_L, and TraditionalCulRes_P data layers implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

The location of a recorded traditional cultural resource, including Traditional Cultural Property and/or Reserved Treaty Rights.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | TraditionalCulRes_A TraditionalCulRes_L TraditionalCulRes_P |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalCulturalResources |
| Previous Layer Names: | TraditionalCulturalResource_A TraditionalCulturalResource_L TraditionalCulturalResource_P |
| Geometry Type: | Polygon, Line, Point |
| Data Steward Organization (Program Area): | Program Area: Cultural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Cultural Resources Program SME |
| Representation: | <ul style="list-style-type: none"> • All traditional cultural resource locations shall represent the latitude, longitude location of an identified site. • Traditional cultural resource areas are represented as closed polygons depicting the outermost extent of the site. • Each individual traditional cultural resource location is represented by a single area feature. • Traditional cultural resources will be represented as a continuous unbroken line. • All points developed from areas shall represent the centroid of the traditional cultural resource area. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|---------------------------------|--|
| HQ AF/A7CAN | <ul style="list-style-type: none"> • AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007 • AFI32-7062, Comprehensive Planning, 27 June 2013 |

| Implementing Program(s): | Driver(s): |

| | <ul style="list-style-type: none"> • AFI32-7064, Integrated Natural Resources Management, 18 November 2014 • AFI32-7065, Cultural Resources Management Program, 19 November 2014 • AFH32-9007, Managing Air Force Real Property, 1 May 1999 • AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 |

Geometry/Topology

| |
|--|
| Polygon Features: |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |
| Line Features: |
| Lines must not self-overlap. |
| Lines must not self-intersect. |
| Lines must be single part features. |
| Lines must be larger than cluster tolerance (.001 meter). |
| Point Features: |
| If a point represents a polygon feature, then the point must fall properly inside of the coinciding polygon. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Military Cultural Resources Analysis Database (MCRAD) is a relational data model that uses the functionality of Microsoft Access. It was created by Dr. Paul Green in collaboration with Dr. Brian Crane to resolve the issues that arise due to idiosyncratic formats of cultural resource data. MCRAD has been refined to support cultural resource business practices with DoD-wide input and has been

adopted by the Deputy Under Secretary of Defense for Installations and Environment as a cultural resources geodata standard. MCRAD, if being used, should only be used to populate the business tables.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the TraditionalCulRes_A, TraditionalCulRes_L and TraditionalCulRes_P layers will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the TraditionalCulRes_A, TraditionalCulRes_L and TraditionalCulRes_P data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--|--|--|--------------------|----------|
| | traditionalCulResIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Traditional Cultural Resource. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Traditional Cultural Resource that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize (Polygon geometry) | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM (Polygon geometry) | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize (Polygon geometry) | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM (Polygon geometry) | The perimeter unit of measure. | foot | String (25) | AF |

Data Layer Specification – Traditional Cultural Resource

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|-----------------------------------|--------------------|----------|
| | latitude <i>(Polygon geometry)</i> | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude <i>(Polygon geometry)</i> | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid <i>(Polygon geometry)</i> | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | lengthSize <i>(Line geometry)</i> | The value of the measured length. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | lengthSizeUOM <i>(Line geometry)</i> | The unit of measure for the calculated length. | foot | String (25) | AF |
| | latitudeFrom <i>(Line geometry)</i> | The latitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | latitudeTo <i>(Line geometry)</i> | The latitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |

Data Layer Specification – Traditional Cultural Resource

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|-----------------|--------------------|----------|
| | longitudeFrom <i>(Line geometry)</i> | The longitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeTo <i>(Line geometry)</i> | The longitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | elevationFrom <i>(Line geometry)</i> | The elevation component of the beginning (upstream/upgradient) coordinate point in feet. | | Double | AF |
| | elevationTo <i>(Line geometry)</i> | The elevation component of the ending (downstream/down gradient) coordinate point in feet. | | Double | AF |
| D | elevationUOM <i>(Line geometry)</i> | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | latitude <i>(Point geometry)</i> | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude <i>(Point geometry)</i> | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |

Data Layer Specification – Traditional Cultural Resource

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--|---|---|--------------------|----------|
| | MGRS <i>(Point geometry)</i> | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation <i>(Line geometry)</i> | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM <i>(Line geometry)</i> | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | resourceID | Represents the Primary Key (ResourceID) for the feature in the MCRAD database. If the Resource_ID does not currently exist in MCRAD, use a concatenation of the installation siteID, the FDS code (CR), and the feature class code (YYYY) followed by a unique sequential six digit number (example: XXXX0001CRYYYY000001) to develop a unique identifier. This value is used to link to the feature class business table. See feature class Data Layer Specifications for applicable feature class code. | Feature Class Codes for Traditional Cultural Resource: Area – “TCRA” Line – “TCRL” Point – “TCRP”. | String (50) | AF |

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------------|--|--|--------------------|----------|
| D | nationalRegisterStatus | Specifies the historic status of a cultural resource feature with respect to placement on the National Register of Historic Places. Categorizes the feature as one of the Real Property Asset (RPA) Historic Status Code values as defined by the DUSD landE RPIR. | For a list of domain values, see HistoricStatusCode in Appendix 1. | String (5) | SDSFIE |
| | otherRegisterStatus | Specifies placement on the World Heritage List, or a cultural property inventory/registry of the host nation. | Status of site on any additional inventory, registry or list. | String (150) | SDSFIE |
| | lastInspectionDate | The date of the last inspection of the feature. Format for date is YYYYMMDD (i.e. September 15, 1994 = 19940915). MCRAD Register table. | | Integer (Long) | AF |
| | inspectionNotes | Any notes regarding the last inspection. | | String (255) | AF |
| | gisDataSource | The data source of the feature. | | String (255) | AF |
| | gisDataReliability | The reliability of the GIS data. | | String (255) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |

Data Layer Specification – Traditional Cultural Resource

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|---|--------------------|----------|
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |

Data Layer Specification – Traditional Cultural Resource

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business tables will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. The business tables for TraditionalCulRes_A, TraditionalCulRes_L and TraditionalCulRes_P are:

| Table Name | Identifier | Source |
|------------------------|------------|----------------|
| cr_TraditionalCulRes_A | ResourceID | MCRAD database |
| cr_TraditionalCulRes_L | ResourceID | MCRAD database |
| cr_TraditionalCulRes_P | ResourceID | MCRAD database |

Business Table Attributes for cr_TraditionalCulRes_A, cr_TraditionalCulRes_L and cr_TraditionalCulRes_P

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|--|---|--------------------|
| | ResourceID | Primary Key in MCRAD Resources table. Used to link this business table to the appropriate feature class. | MCRAD Resources table | String (50) |
| | Res_Num | Smithsonian trinomial or equivalent. MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Res_Name | Site name recognized by agency. MCRAD Resources table. | MCRAD Resources table | String (100) |
| | Res_Grp | Type of resource (single, district, route, other aggregate groupings, etc.). MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Res_Type | Archaeological site, building, structure, object, etc. MCRAD Resources table. | MCRAD Resources table | String (155) |
| | Res_Desc | Short description of resource. MCRAD Resources table. | MCRAD Resources table | String (255) |
| | Condition | Overall condition, nature of disturbances, etc. MCRAD Resources table. | MCRAD Resources table | String (255) |
| D | Disturb | The percentage of the site that has been disturbed. MCRAD Resources table. | MCRAD Resources table For a list of domain values, see Disturbance in Appendix 1. | String (10) |
| | Disturb_Source | Describes the source of the disturbance. MCRAD Resources table. | MCRAD Resources table | String (250) |

Data Layer Specification – Traditional Cultural Resource

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|------------------|--|---|--------------------|
| D | Threatened | Indicates whether resource is threatened. MCRAD Resources table. | MCRAD Resources table NA, no, TBD, yes | String (3) |
| | Threats | Describes the nature of threats to resource. MCRAD Resources table. | MCRAD Resources table | String (255) |
| D | Res_Status | Research status: Evaluated? Excavated? MCRAD Resources table. | MCRAD Resources table For a list of domain values, see SiteStatus in Appendix 1. | String (15) |
| | Drainage | River drainage where resource is located. MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Physio_Prov | Name of physiographic province. MCRAD Resources table. | MCRAD Resources table | String (50) |
| | Size_Notes | Any notes regarding the size of the feature. MCRAD Resources table. | MCRAD Resources table | String (255) |
| | Occ_Start | The occupation start year. MCRAD Resources table. | MCRAD Resources table | Double |
| | Occ_End | The occupation end year. MCRAD Resources table. | MCRAD Resources table | Double |
| D | Date_Meth | Method used to determine date. MCRAD Resources table. | MCRAD Resources table For a list of domain values, see DateMethod in Appendix 1. | String (20) |
| | Fac_Num | Air Force building or facility number (for historic buildings/structures on base property). MCRAD Resources table. | MCRAD Resources table | String (50) |
| D | Artifact_Density | Density of artifacts within the area. MCRAD Resources table. | MCRAD Resources table For a list of domain values, see ArtifactDensity in Appendix 1. | String (25) |
| | Rec_Date | Date resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Rec_Month | Month resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |

Data Layer Specification – Traditional Cultural Resource

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|---|---|--------------------|
| | Rec_Day | Day resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Rec_Year | Year resource was originally recorded. MCRAD Resources table. | MCRAD Resources table | Integer (Long) |
| | Register_Name | Identifies the name of the register (e.g. World Heritage, Host Nation Register). MCRAD Register table. | MCRAD Register table | String (50) |
| | Op_Source | Source of opinion (Consultant, Agency). MCRAD Register table. | MCRAD Register table | String (50) |
| | Signif_Level | Significance level: International, National, Provincial, Local. MCRAD Register table. | MCRAD Register table / International, National, Provincial, Local | String (50) |
| | A | NRHP Criterion A. MCRAD Register table. | MCRAD Register table | String (3) |
| | B | NRHP Criterion B. MCRAD Register table. | MCRAD Register table | String (3) |
| | C | NRHP Criterion C. MCRAD Register table. | MCRAD Register table | String (3) |
| | D | NRHP Criterion D. MCRAD Register table. | MCRAD Register table | String (3) |
| | CritConsid | Describes the NRHP criteria considerations (Less than 50 years of age, Church, Relocated, etc). MCRAD Register table. | MCRAD Register table | String (255) |
| | I1 | Integrity of location. MRCAD Register table. | MCRAD Register table | String (50) |
| | I2 | Integrity of design. MRCAD Register table. | MCRAD Register table | String (50) |
| | I3 | Integrity of setting. MRCAD Register table. | MCRAD Register table | String (50) |
| | I4 | Integrity of materials. MRCAD Register table. | MCRAD Register table | String (50) |
| | I5 | Integrity of workmanship. MRCAD Register table. | MCRAD Register table | String (50) |

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|---|---|--------------------|
| | I6 | Integrity of feeling. MRCAD Register table. | MCRAD Register table | String (50) |
| | I7 | Integrity of association. MRCAD Register table. | MCRAD Register table | String (50) |
| | Sig_Per | The period of significance. MRCAD Register table. | MCRAD Register table | String (50) |
| | Themes | Applicable National Register themes. MRCAD Register table. | MCRAD Register table | String (255) |
| | Sensitivity | The potential effects (i.e. Sensitive to visual effects, Excavation, etc). MRCAD Register table. | MCRAD Register table | String (50) |
| | Date_Notes | Notes on the date for the NR opinion. MRCAD Register table. | MCRAD Register table | String (255) |
| | Recon_Year | The year the opinion needs to be reconsidered, such as when a property reaches 50 years of age. MRCAD Register table. | MCRAD Register table | Integer (Long) |
| | Opinion_Status | The status of the opinion, such as Official-Current, Official-Not Current, Unofficial, Advisory. MRCAD Register table. | MCRAD Register table / Official-Current, Official-Not Current, Unofficial, Advisory | String (50) |
| | Opinion_Date | The date in which NRHP status opinion was rendered. Format for date is YYYYMMDD (i.e. September 15, 1994 = 19940915). MRCAD Register table. | MCRAD Register table | Integer (Long) |
| | Notes | Notes. MCRAD Resources and Register tables. | MCRAD Resources and Register table | String (255) |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Cultural Resources, Traditional Cultural Resource

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: ArtifactDensity | |
|------------------------------------|--|
| ATTRIBUTE NAME: Artifact_Density | |
| CODED DOMAIN | DEFINITION |
| none | There were not any artifacts found at this site. |
| low1 | Artifact density is low at 1. Based on a density range between 1-10. |
| moderate2-5 | Artifact density range is moderate between 2-5. Based on a density range between 1-10. |
| high6-10 | Artifact density range is high between 6-10. Based on a density range between 1-10. |
| veryHigh10 | Artifact density is very high at greater than 10. Based on a density range between 1-10. |
| veryLow10 | Artifact density is very low at 1 - 10. Based on a density range between 1-1000. |
| low11-24 | Artifact density range is low between 11-24. Based on a density range between 1-1000. |
| moderate25-100 | Artifact density range is moderate between 25-100. Based on a density range between 1-1000. |
| high101-1000 | Artifact density range is high between 101-1000. Based on a density range between 1-1000. |
| veryHigh1000 | Artifact density is very high at greater than 1000. Based on a density range between 1-1000. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The artifact density of this location is unknown. |

| DOMAIN TABLE NAME: DateMethod | |
|-------------------------------|---|
| ATTRIBUTE NAME: Date_Meth | |
| CODED DOMAIN | DEFINITION |
| archaeomagnetic | Date method type is archaeomagnetic. |
| bioluminescence | Date method type is bioluminescence. |
| biosilicates | Date method type is biosilicates. |
| c14 | Date method type is C-14 radioactive. |
| ceramicDating | Date method type is ceramic dating. |
| chronometric | Date method type is absolute/chronometric. |
| NA | Not Applicable: No value exists. |
| none | A date method type was not used. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| projectilePt | The date method type is projectile point technique inference. |
| relative | The data method type is relative. |
| researchExp | The date method type is research/experience. |
| seriation | The date method type is seriation. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| thermolumin | The date method type is thermoluminescence. |
| treeRing | The date method type is tree ring. |

| DOMAIN TABLE NAME: Disturbance | |
|--------------------------------|---|
| ATTRIBUTE NAME: Disturb | |
| CODED DOMAIN | DEFINITION |
| destroyed | The feature has been destroyed. |
| majorImp | The feature has experienced major impact with 51-99% disturbed. |

Data Layer Specification – Traditional Cultural Resource

| DOMAIN TABLE NAME: Disturbance | |
|--------------------------------|---|
| ATTRIBUTE NAME: Disturb | |
| minorImp | The feature has experienced minor impact with 1-25% disturbed. |
| modImp | The feature has experienced moderate impact with 26-50% disturbed. |
| NA | Not Applicable: No value exists. |
| none | No disturbance has impacted the feature. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The disturbance level of the feature is unknown. |

| DOMAIN TABLE NAME: HistoricalStatusCode | |
|---|--|
| ATTRIBUTE NAME: nationalRegisterStatus | |
| CODED DOMAIN | DEFINITION |
| DNE | Determined Not Eligible for Listing: An asset that has been evaluated using the National Register of Historic Places (NRHP) criteria and is determined not to meet the criteria of eligibility. |
| DNR | Designation Rescinded for NHLI/NHLC/NREI/NREC National Register Property: Determined by the Keeper of the National Register of Historic Places (NRHP) to no longer meet the criteria for listing in the NRHP. |
| ELPA | Eligible for the Purposes of a Program Alternative: An asset that is included within the scope of a program alternative developed and implemented pursuant to 36 CFR 800.14, Protection of Historic Properties. |
| NA | Not Applicable: No value exists. |
| NAR | Not Assessed Routinely: An asset that is not routinely planned to be evaluated for National Register of Historic Places (NRHP) eligibility. |
| NCE | Non-Contributing Element of NHL/NRL/NRE District: Assets within the designated boundaries of a National Historic Landmark (NHL) or National Register of Historic Places (NRHP) listed or eligible property that have been evaluated and determined not to contribute to the historic significance of the property. |
| NEV | Not Yet Evaluated: An asset that has not been evaluated for National Register of Historic Places (NRHP) eligibility. |
| NHLC | Contributing Element of a NHL District: An asset that is identified as a contributing element of a larger property listed in the National Register of Historic Places (NRHP) and also designated a National Historic Landmark (NHL) by the Secretary of Interior. |
| NHLI | Individual National Historic Landmark: An asset that is individually listed in the National Register of Historic Places (NRHP) and also designated as a National Historic Landmark (NHL) by the Secretary of Interior. |
| NREC | Contributing Element of NRE District: An asset that is identified as a contributing element of a larger property or district determined eligible for inclusion in the National Register of Historic Places (NRHP). |
| NREI | Individual National Register Eligible: An individual asset that is determined to meet the National Register of Historic Places (NRHP) criteria of eligibility. |
| NRLC | Contributing Element of NRL District: An asset that is identified as a contributing element of a historic property listed in the National Register of Historic Places (NRHP). |
| NRLI | Individual National Register Listed: An individual asset that has been listed in the National Register of Historic Places (NRHP). |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

Data Layer Specification – Traditional Cultural Resource

| DOMAIN TABLE NAME: SiteStatus | |
|-------------------------------|---|
| ATTRIBUTE NAME: Res_Status | |
| CODED DOMAIN | DEFINITION |
| collection | Items have been collected from the site. |
| evaluated | The site has been evaluated. |
| excavated | The site has been excavated. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| partMitigate | The site is in partial mitigation. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| tested | The site has been tested. |
| undisturbed | The site is undisturbed (Surveyed - No Collections). |
| unknown | The site status is unknown. |

| 03/01/2018 | AirEmissionSource _20180301 | <ul style="list-style-type: none"> Updated the “Definition”, “Positional Accuracy”, “Attributes”, “Business Tables,” and “Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Attribute Domain Tables” sections. |

This Data Layer Specification (DLS) defines geospatial data specifications for the AirEmissionSource_P data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

A specific location of an intentional air emission discharge into the environment.

True non-point source, base-wide type air emission discharges should not be included in this data layer. The following table lists true non-point, base-wide type air emissions. This is not a complete list.

| Air Emission Source Categories |
|---|
| Aircraft operations |
| Asphalt operations |
| Construction operations |
| Deicing of aircraft |
| Electric transmission |
| Hazardous materials |
| Hazardous waste |
| Inspection only processes for compliance with housekeeping requirements |
| Liquid calibration units |
| Miscellaneous chemical usage |
| Ozone depleting chemicals |
| Purchased power |
| Roads |
| Safety |
| Sealants and adhesives |
| Spills/releases |
| Storage piles |
| Tactical support equipment |

Geometry/Topology

| Point Features: |
|--------------------------|
| Points must be disjoint. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. As a general rule, mobile air emission source points will not be included in the feature class. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the AirEmissionSource_P layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the AirEmissionSource_P data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|--|--------------------|----------|
| | airEmissionSourceIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Air Emission Source point. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Air Emission Source point that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | latitude | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |

Data Layer Specification – Air Emission Source

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|---|--------------------|----------|
| | MGRS | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | apimsID | The unique identifier for each AirEmissionSource_P. This will be the Process PID from APIMS for processes without equipment, or a combination of the Process PID and Equipment PID for processes with equipment. In the latter case the two values will be combined, Process PID first followed by Equipment PID, to create a unique value for each air emission source point. | Allowed values can be obtained from APIMS database. | String (50) | AF |
| | processID | The process ID; from the Process_ID field in the Unique_Process table in APIMS. | Allowed values can be obtained from APIMS database. | String (20) | AF |
| | processName | Short descriptive name of activity; from the Process_Name field in the Unique_Process table in APIMS. | Allowed values can be obtained from APIMS database. | String (50) | AF |

Data Layer Specification – Air Emission Source

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------|--|---|--------------------|----------|
| | baseSpecificID | A base specific identifier; from the UPID6 field in the Unique_Process table in APIMS. | Allowed values can be obtained from APIMS database. | String (7) | AF |
| | sourceCategoryName | General category of process activity type; from the Source_Category_Name field in the Source_Category table in APIMS. | Allowed values can be obtained from APIMS database. | String (80) | AF |
| | location | Structured location value; from the Location field in the Location table in APIMS. | Allowed values can be obtained from APIMS database. | String (100) | AF |
| | bldgNum | Additional location information to supplement location or other fields; from the Bldg_No field in the Unique_Process table in APIMS. | Allowed values can be obtained from APIMS database. | String (30) | AF |
| D | isPermittedSource | Indicates whether a source is covered under an installation air permit or not; from the Permitted_Source_Flg field in the Unique_Process table in APIMS. | Allowed values can be obtained from APIMS database. NA, no, TBD, yes | String (3) | AF |
| | emissionPoint | Identifies where emissions are released to; from the Description field in the VT_Emission_Point_Type table in APIMS. | Allowed values can be obtained from APIMS database. | String (75) | AF |

Data Layer Specification – Air Emission Source

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| | sourceType | Identifies high level categorization of a source as mobile, stationary or other related types; from the Description field in the VT_Source_Type table in APIMS. | Allowed values can be obtained from APIMS database. | String (75) | AF |
| | equipMfr | Name of equipment manufacturer; from the MFG_Name field in the Model table in APIMS. | Allowed values can be obtained from APIMS database. | String (50) | AF |
| | equipDesc | General description applied to all equipment of this model; from the Equip_Desc field in the Model table in APIMS. | Allowed values can be obtained from APIMS database. | String (255) | AF |
| | capacity | Operational capacity of equipment; from the Capacity field in the Equipment table in APIMS. | Allowed values can be obtained from APIMS database. | Double | AF |
| | designCapacity | Design capacity of equipment; from the Rated_Capacity field in the Equipment table in APIMS. | Allowed values can be obtained from APIMS database. | Double | AF |
| | maxCapacity | Maximum operational capacity of equipment; from the Maximum_Capacity field in the Equipment table in APIMS. | Allowed values can be obtained from APIMS database. | Double | AF |
| D | capacityUOM | Unit of measure for the capacity fields. | Allowed values can be obtained from APIMS database. For the list of domain values see CapacityUOM in Appendix 1. | String (35) | AF |

Data Layer Specification – Air Emission Source

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------|--|---|--------------------|----------|
| | ratedKW | Electrical production capacity of generator; from the Rated_KW field in the Equipment table in APIMS. | Allowed values can be obtained from APIMS database. | Double | AF |
| | ratedHorsepower | Power rating of engine; from the Rated_Horsepower field in the Equipment table in APIMS. | Allowed values can be obtained from APIMS database. | Double | AF |
| | ignitionType | Identifies an engine as compression (diesel) or spark (gasoline, etc); from the Ignition_Type field in the Equipment table in APIMS. | Allowed values can be obtained from APIMS database. | String (15) | AF |
| | heatingCapacity | Heat input rating of heating equipment; from the Heating_Capacity field in the Equipment table in APIMS. | Allowed values can be obtained from APIMS database. | Double | AF |
| D | heatingCapacityUOM | Unit of measure for heating capacity. | Allowed values can be obtained from APIMS database. For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (45) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |

Data Layer Specification – Air Emission Source

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |

Data Layer Specification – Air Emission Source

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Primary Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for AirEmissionSource_P is:

| Table Name | Identifier | Source |
|----------------------|------------|----------------------|
| aq_AirEmissionSource | apimsID | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Air Quality, Air Emission Source

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: CapacityUOM | |
|------------------------------------|--|
| ATTRIBUTE NAME: capacityUOM | |
| CODED DOMAIN | DEFINITION |
| ampere | Ampere - the SI base unit for electrical current. |
| boilerHorsepower | Boiler horsepower - a unit of measure equal to a boiler thermal output of 33,475 Btu/h. |
| britishThermalUnit | British thermal unit - A traditional unit of measurement of energy equal to approximately 1,055 Joules. |
| britishThermalUnitPerHour | British thermal unit per hour. |
| cubicFeetPerMinute | Cubic feet per minute. |
| cubicFoot | Cubic foot - a conventional unit of measurement of volume whose dimensions are one foot on each side, 0.02831685 cubic meters. |
| cubicYardPerHour | Cubic yard per hour. |
| gallonPerDay | Gallon per day. |
| gallonPerHour | Gallon per hour. |
| gallonPerMinute | Gallon per minute. |
| gramsPerHour | Grams per hour. |
| horsePower | Horsepower. |
| kilowatt | A conventional unit of measurement of power equal to one thousand watts. |
| kilowattHour | Kilowatt Hour - A conventional unit of measurement of energy in electrical systems equal to 3,600,000 Joules. |
| millionBritishThermalUnits | Million British thermal units. |
| millionBritishThermalUnitsPerHour | Million British thermal units per hour. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| pound | Pound (avoirdupois) - a unit of mass equal to 0.45359237 kilograms. |
| poundPerHour | Pound per hour. |
| poundPerSquareInch | Pounds per square inch. |
| revPerMinute | Revolutions per minute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| thousandBritishThermalUnits | Thousand British thermal units. |
| thousandBritishThermalUnitsPerHour | Thousand British thermal units per hour. |
| ton | Ton (short). |
| tonPerHour | Tons (short) per hour. |
| usGallon | US gallon - a conventional unit of measurement of liquid volume that is 231 cubic inches in dimension, 0.003785412 cubic meters. |
| usQuart | US quart - a conventional unit of measurement of liquid volume that is 1/4 of a U.S. gallon, being 0.000946353 cubic meters. |

Data Layer Specification – Hazardous Material Site

This Data Layer Specification (DLS) defines geospatial data specifications for the HazMatSite_P data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

This feature is used to identify the active HazMart and HazShop locations within the installation. HazMarts are the central issuing point for all hazardous materials to their associated HazShop. This feature is also associated to a building within the real property database.

Data Layer Details

| | |

Geometry/Topology

| Point Features: |
|--------------------------|
| Points must be disjoint. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on a quarterly (3 month) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the quarterly update. Additionally a quarterly Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Data should only represent active marts and shops with approved processes and materials. Virtual sites, i.e. those without a physical location, should not be included.

Positional Accuracy

Horizontal Accuracy: At a minimum, data developed within this layer should be within the building footprint of the building where the mart or shop is located. If possible, data should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the HazMatSite_P layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the HazMatSite_P data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| | hazMatSiteIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Allowed values can be obtained from EESOH-MIS. | String (80) | SDSFIE |

Data Layer Specification – Hazardous Material Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|---|--|--------------------|----------|
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Hazardous Material Site that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | latitude | The latitude coordinate in decimal degrees to sub foot precision. | | Double | AF |
| | longitude | The longitude coordinate in decimal degrees to sub foot precision. | | Double | AF |
| | MGRS | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | shopID | The unique hazmat shop ID from EESOH-MIS. Used to link to the HazMatSite business table. | Allowed values can be obtained from EESOH-MIS. | Double | AF |
| D | hazMatSite | A descriptor of the type of hazardous material site. | For a list of domain values, see HazMatSiteType in Appendix 1. | String (7) | AF |
| | buildingNumber | The building number for the building where the feature is located. | Allowed values can be obtained from EESOH-MIS. | String (16) | AF |
| | shopCode | Installation specific codes to identify the different shops. | Allowed values can be obtained from EESOH-MIS. | String (255) | AF |

Data Layer Specification – Hazardous Material Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| | orgOwnerCode | UIC of the organization that owns the site. | | String (255) | AF |
| | orgOwnerName | Name of the organization that owns the site. | Allowed values can be obtained from EESOH-MIS. | String (255) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |

Data Layer Specification – Hazardous Material Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |

Data Layer Specification – Hazardous Material Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |

Data Layer Specification – Hazardous Material Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|------------------------|----------------|--------------------|----------|
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |

Business Tables

The business tables will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business tables for HazMatSite_P are:

| Table Name | Identifier | Source |
|----------------------|--------------|----------------------|
| hm_HazMatSiteProcess | hazmatShopID | Program Area Manager |

Business Table Attributes for hm_HazMatSiteProcess

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------------|--|--|--------------------|
| | HazmatShopID | The HazMat shop ID. This field is used to link this table to the HazMatSite_P attribute table. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | Double |
| | Hazmat_Shop_CD | The HazMat shop code. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (20) |
| | Hazmat_Shop_NM | The HazMat shop name. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (55) |
| | Hazmat_Location_ID | The HazMat shop location ID. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | Double |
| | Hazmat_Location_Name | The HazMat shop location name. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (55) |
| | SID | The installation Structural Interior Design code. This code is unique to each installation. | Allowed values can be obtained from EESOH-MIS. | String (16) |

Data Layer Specification – Hazardous Material Site

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|------------------------|--|--|--------------------|
| | Organization_Symbol | The organization symbol of the organization responsible for the HazMat shop. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (55) |
| | Office_Symbol | The office symbol of the office responsible for the HazMat shop. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (20) |
| | Shop_Type | The type of HazMat site, either a shop or HazMart. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (75) |
| | Ownership | Identification of whether the shop/hazmart is government operated or contracted. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (75) |
| | Process_Status | The status of the HazMat process. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (55) |
| | Hazmat_Process_ID | The process ID for HazMat process(es) that utilize the hazardous material. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (4000) |
| | Unique_Process_NM | The name of the HazMat process. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (50) |
| | Process_NM_Description | A description of the HazMat process. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (75) |
| | Proc_Location | The location where the HazMat process occurs. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (50) |
| | MSN | The Material Stock Number for the hazardous material. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (25) |

Data Layer Specification – Hazardous Material Site

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|---------------------|---|--|--------------------|
| | Noun | The noun for the hazardous material used in the HazMat process. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (100) |
| | CUP_QIP_SUI | The Container Unit Package, Quantity In Package, and Supply Unit of Issue of the material. These attributes are derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (25) |
| | Max_Allowed_On_Hand | The maximum number of containers allowed to be stored on site. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | Double |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Data Layer Specification – Hazardous Material Site

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Hazardous Materials, Hazardous Material Site

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: HazMatSiteType | |
|-----------------------------------|--|
| ATTRIBUTE NAME: hazMatSite | |
| CODED DOMAIN | DEFINITION |
| hazMart | The site is a Hazardous Material Pharmacy. |
| hazShop | The site is a Hazardous Material Shop. |

| 03/01/2018 | HazardousWasteSite_20180301 | <ul style="list-style-type: none"> Updated the “Definition”, “Positional Accuracy”, “Attributes”, “Business Tables,” and “Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Attribute Domain Tables” sections. |

Data Layer Specification – Hazardous Waste Site

This Data Layer Specification (DLS) defines geospatial data specifications for the HazWasteSite_P data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

A defined, active area designated for the storage of contained hazardous waste.

Data Layer Details

| | |

Geometry/Topology

| Point Features: |
|--------------------------|
| Points must be disjoint. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on a quarterly (3 month) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the quarterly update. Additionally a quarterly Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Data should only represent active sites with approved waste streams. Virtual sites, i.e. those without a physical location, should not be included.

Positional Accuracy

Horizontal Accuracy: At a minimum, data developed within this layer should be within the building footprint of the building where the site is located. If possible, data should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the HazWasteSite_P layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the HazWasteSite_P data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|--|--------------------|----------|
| | hazWasteSiteIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Allowed values can be obtained from EESOH-MIS. | String (80) | SDSFIE |

Data Layer Specification – Hazardous Waste Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|---|--|--------------------|----------|
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Hazardous Waste Site that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | latitude | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | MGRS | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | hazWasteSiteID | The unique hazardous waste site ID from EESOH-MIS. Used to link to the HazWasteSite business table. | Allowed values can be obtained from EESOH-MIS. | Double | AF |
| D | hazWasteSiteType | Indicates which type of waste site is present. | Allowed values can be obtained from EESOH-MIS. For a list of domain values, see WasteSiteType in Appendix 1. | String (30) | AF |

Data Layer Specification – Hazardous Waste Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|---|--------------------|----------|
| D | storageDurationTimeLimit | A descriptor for the storage duration time limit. | Allowed values can be obtained from EESOH-MIS. For a list of domain values, see StorageDurationTimeLimit in Appendix 1. | String (10) | AF |
| D | isExtremeHazSub | Indicates whether or not the storage location stores extremely hazardous substances. | NA, no, TBD, yes | String (3) | AF |
| D | hazLocation | A descriptor indicating the category of storage location for contained hazardous material/hazardous waste (e.g., area, building, or room). | For a list of domain values, see HazLocation in Appendix 1. | String (10) | AF |
| D | permitStatus | Indicates the status of the permit for the subject item. | For a list of domain values, see PermitStatus in Appendix 1. | String (30) | AF |
| | buildingNumber | The building number for the building where the feature is located. | Allowed values can be obtained from EESOH-MIS. | String (16) | AF |
| | shopCode | Installation specific codes to identify the different shops. | Allowed values can be obtained from EESOH-MIS. | String (255) | AF |
| | orgOwnerCode | UIC of the organization that owns the site. | Allowed values can be obtained from EESOH-MIS. | String (255) | AF |
| | orgOwnerName | Name of the organization that owns the site. | Allowed values can be obtained from EESOH-MIS. | String (255) | AF |
| | EPAWasteFacID | EPA unique ID associated with each HazSite. | Allowed values can be obtained from EESOH-MIS. | String (255) | AF |

Data Layer Specification – Hazardous Waste Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|---|--------------------|----------|
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |

Data Layer Specification – Hazardous Waste Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |

Data Layer Specification – Hazardous Waste Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |

Business Tables

The business tables will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the

Data Layer Specification – Hazardous Waste Site

attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business tables for HazWasteSite_P are:

| Table Name | Identifier | Source |
|-----------------------|----------------|----------------------|
| hw_HazWasteSiteStream | HazwasteSiteID | Program Area Manager |

Business Table Attributes for hw_HazWasteSiteStream

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|------------------------|---|--|--------------------|
| | HazwasteSiteID | The hazardous waste site ID. This field is used to link this table to the HazWasteSite_P attribute table. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | Double |
| | Site_Nbr | The hazardous waste site number. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (25) |
| | Hazwaste_Location_ID | The hazardous waste site location ID. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | Double |
| | Hazwaste_Location_Name | The hazardous waste site location name. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (55) |
| | SID | The installation Structural Interior Design Code. This code is unique to each installation. | Allowed values can be obtained from EESOH-MIS. | String (16) |
| | Organization | The name of the organization responsible for the hazardous waste site. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (55) |
| | Hazwaste_Shop_ID | The hazardous waste shop ID. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | Double |
| | Hazwaste_Shop_CD | The hazardous waste shop code. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (20) |
| | Hazwaste_Shop_NM | The hazardous waste shop name. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (55) |

Data Layer Specification – Hazardous Waste Site

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|---------------------|---|--|--------------------|
| | Stream_ID | The hazardous waste stream ID. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | Double |
| | Stream_Nbr | The hazardous waste stream number. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (20) |
| | Stream_NM | The hazardous waste stream name. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (110) |
| | Label_Type | The hazardous waste site stream default container label. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (4000) |
| | Disposal_Code_NM | The hazardous waste disposal code name. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (260) |
| | Site_Profile_ID | The hazardous waste site profile ID. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | Double |
| | Profile_Nbr | The hazardous waste site profile number. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (25) |
| | Waste_Description_1 | Description of the hazardous waste. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (75) |
| | DLADS_MSN | The Defense Logistics Agency Disposition Services (DLA-DS) Material Stock Number for the hazardous waste. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (25) |
| | EPA_CD | The EPA code(s) for the hazardous waste. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (4000) |
| | CLIN | The Contract Line Item Number. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (4000) |

Data Layer Specification – Hazardous Waste Site

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|---------------------|---|--|--------------------|
| | CAS_No | The CAS number for the chemical(s) in the hazardous substance. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (4000) |
| | Hazwaste_Process_ID | The process ID for HazMat process(es) contributing to the waste stream. This attribute is derived from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (4000) |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Data Layer Specification – Hazardous Waste Site

Theme Keywords: Hazardous Waste, Hazardous Waste Site

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: HazLocation | |
|--------------------------------|---|
| ATTRIBUTE NAME: hazLocation | |
| CODED DOMAIN | DEFINITION |
| area | A defined area designated for the storage of hazardous material or hazardous waste. |
| building | A building designated for the storage of hazardous material or hazardous waste. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| room | A room designated for the storage of hazardous material or hazardous waste. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| vault | A secured vault or cabinet designated for the storage of hazardous material or hazardous waste. |

| DOMAIN TABLE NAME: PermitStatus | |
|---------------------------------|---|
| ATTRIBUTE NAME: permitStatus | |
| CODED DOMAIN | DEFINITION |
| acquired | The parcel has been acquired. |
| cancelled | The parcel acquisition has been cancelled. |
| constructPermissued | A construction permit has been issued. |
| constructPermUnderRev | The construction permit application is under review. |
| disposed | The parcel has been disposed. |
| excessed | The parcel has been excessed. |
| expired | The parcel has expired. |
| limStorageFacilAppUnderRev | The limited storage facility application is under review. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| permAppNotCalledIn | The permit application has not been called in. |
| permAppNotSub | The permit application has not been submitted to the regulatory authority. |
| permAppUnderRev | The permit application is under review by the regulatory authority. |
| permDenied | The permit has been denied by the regulatory authority. |
| permExp | The permit has expired. |
| permIss | A permit has been issued by the regulatory authority. |
| permNotIss | A permit has not been issued. |
| permNotReq | A permit or closure is not required. |
| permReappUnderRev | A permit reapplication is under review by the regulatory authority. |
| permReq | The permit has been removed by the regulatory authority. |
| surplus | The parcel has been surplus. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| toBeAcq | The parcel is to be acquired. |

| DOMAIN TABLE NAME: StorageDurationTimeLimit | |
|---|------------------------------|
| ATTRIBUTE NAME: storageDurationTimeLimit | |
| CODED DOMAIN | DEFINITION |
| 90day | 90 day duration time limit. |
| 180day | 180 day duration time limit. |
| 270day | 270 day duration time limit. |

Data Layer Specification – Hazardous Waste Site

| DOMAIN TABLE NAME: StorageDurationTimeLimit | |
|---|---|
| ATTRIBUTE NAME: storageDurationTimeLimit | |
| 365day | 365 day duration time limit. |
| NA | Not Applicable: No value exists. |
| none | There is not a storage duration time limit. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The storage duration time limit is unknown. |

| DOMAIN TABLE NAME: WasteSiteType | |
|----------------------------------|--|
| ATTRIBUTE NAME: hazWasteSiteType | |
| CODED DOMAIN | DEFINITION |
| hazWasteAccumSite | The site is a 90/180/270 day accumulation site (time limit). |
| initialAccumPt | The site is a satellite or initial accumulation site (no time limit). |
| NA | Not Applicable: No value exists. |
| oconusHazWasteAccumPt | The site is a hazardous waste accumulation point (no time limit). |
| oconusHazWasteStorageArea | The site is a hazardous waste storage area central hazardous waste storage site. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| trmntStrgDispFacContStrgFac | The site is a 365 day RCRA permitted storage facility (time limit) treatment, storage and disposal facility or container storage facility. |
| universalWaste | The site is a universal waste collection site. |
| usedOil | The site is a used oil collection site. |

Environmental GIS Program**

Revision History

| Date: | Version: | Description of Revision: |
|--------------|-----------------------------|---|
| 12/12/2016 | SolidWasteLandfill_20161212 | <ul style="list-style-type: none"> Removed “the vertical datum shall be Mean Sea Level (MSL_Height),” from the Coordinate System section. |
| 6/23/2016 | SolidWasteLandfill_20160623 | <ul style="list-style-type: none"> Updated “Positional Accuracy” section. |
| 3/13/2017 | SolidWasteLandfill_20170310 | <ul style="list-style-type: none"> Updated all Air Force Standard attribute fields to match August 6, 2015 GeoBase Data Dictionary. Updated “Positional Accuracy” section. Updated “For Empty Text Values” subsection. |
| 6/8/2017 | SolidWasteLandfill_20170608 | <ul style="list-style-type: none"> Updated the data layer update frequency in the “Sources and Source Selection” section. Updated “Data Steward POC” |
| 03/01/2018 | SolidWasteLandfill_20180301 | <ul style="list-style-type: none"> Updated the “Definition”, “Geometry/Topology”, “Positional Accuracy”, “Attributes”, “Business Tables,” and “Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Attribute Domain Tables” sections. |

Data Layer Specification – Solid Waste Landfill

This Data Layer Specification (DLS) defines geospatial data specifications for the SolidWasteLandfill_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

A facility or site, permitted by a regulatory authority, which is specifically designed and managed for the land disposal of solid waste.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | SolidWasteLandfill_A |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalIntegratedSolidWaste |
| Previous Layer Names: | landfill_cell_area landfill_runoff_retention_area solid_waste_landfill_area SolidWasteLandfill |
| Geometry Type: | Polygon |
| Data Steward Organization (Program Area): | Program Area: Integrated Solid Waste |
| Data Steward POC: | AFCEC/CZTQ Air Force Integrated Solid Waste Program SME |
| Representation: | <ul style="list-style-type: none">• Solid waste landfill areas are represented as closed polygons depicting the outermost extent of the area.• Each individual solid waste landfill area is represented by a single area feature. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|---------------------------------|---|
| HQ AF/A7CAN | <ul style="list-style-type: none">• AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007• AFI32-7062, Base Comprehensive Planning, 13 November 2009• AFI32-7064, Integrated Natural Resources Management, 18 November 2014• AFI32-7065, Managing Cultural Resources Management Program, 19 November 2014• AFH32-9007, Managing Air Force Real Property, 1 May 1999• AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 |

| Implementing Program(s): | Driver(s): |
|--------------------------|--|
| | <ul style="list-style-type: none"> • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must not overlap. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the SolidWasteLandfill_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the SolidWasteLandfill_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------------|--|---|--------------------|----------|
| | solidWasteLandfillIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Solid Waste Landfill. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Solid Waste Landfill that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |

Data Layer Specification – Solid Waste Landfill

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|--|--------------------|----------|
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| D | landfillFeature | The type of landfill feature. | For a list of domain values, see LandfillFeature in Appendix 1. | String (50) | AF |
| D | landfillType | Type of landfill. | For a list of domain values, see SolidWasteType in Appendix 1. | String (35) | AF |
| | dateEst | The date on which the feature was originally established. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |

Data Layer Specification – Solid Waste Landfill

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------|--|---|--------------------|----------|
| | dateInspt | The date on which the feature was last inspected. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| | dateClosed | Indicates the date on which the landfill was closed, if applicable. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| D | permitStatus | Indicates the status of the permit for the subject item. | For a list of domain values, see PermitStatus in Appendix 1. | String (30) | AF |
| | permitNum | Unique identification number of the operational permit received from the applicable federal, state, or local regulatory agency. | | String (50) | AF |
| | permitExp | Indicates the date on which the current permit expires. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| D | isDispPit | Indicates whether the landfill is associated with a disposal pit. | NA, no, TBD, yes | String (3) | AF |
| D | hasLeachateCollect | Indicates whether the landfill has a leachate collection and removal system. | NA, no, TBD, yes | String (3) | AF |
| D | hasGroundwaterMon | Indicates whether the landfill has groundwater monitoring stations. | NA, no, TBD, yes | String (3) | AF |

Data Layer Specification – Solid Waste Landfill

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-------------------|--|---|--------------------|----------|
| D | hasMethaneCollect | Indicates whether the landfill has a methane collection system. | NA, no, TBD, yes | String (3) | AF |
| D | landfillStatus | The status of the landfill, from lists or entered from field inspections. | For a list of domain values, see SolidWasteStatus in Appendix 1. | String (10) | AF |
| | localEnvReg | Indicates the local (state, county and/or city) environmental regulation under which the feature is operated or permitted. | | String (100) | AF |
| D | envReg | Indicates the federal environmental regulation the feature is operated and permitted under. | For a list of domain values, see EnvReg in Appendix 1. | String (10) | AF |
| | epaDesignator | Unique site specific designation developed, and used, by the Environmental Protection Agency. | | String (20) | AF |
| | grndwtrElev | Indicates the elevation, in feet, of the seasonal high groundwater table at the landfill. | | Double | AF |
| D | grndwtrElevUOM | The unit of measure used for the groundwater elevation. | foot | String (25) | AF |
| D | isRemediation | Indicates whether or not further action or remediation is necessary. | NA, no, TBD, yes | String (3) | AF |
| D | actionStatus | The status for correcting the environmental hazard. | For a list of domain values, see ActionStatus in Appendix 1. | String (10) | AF |

Data Layer Specification – Solid Waste Landfill

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---------------------|---|--|--------------------|----------|
| | avgIntake | A descriptor for the average intake of the landfill. | | Double | AF |
| | landfillCapacity | The total estimated volume for the landfill in cubic yards. | | Double | AF |
| D | landfillCapacityUOM | The unit of measure used for the volumes of the landfill. | cubicYard | String (20) | AF |
| | currentVol | The volume of the landfill currently filled in cubic yards. | | Double | AF |
| D | currentVolUOM | The unit of measure used for the volumes of the landfill. | cubicYard | String (20) | AF |
| | bottomElev | The bottom elevation, in feet, of the deepest cell at the landfill. | | Double | AF |
| D | bottomElevUOM | The unit of measure used for the deepest cell elevation. | foot | String (25) | AF |
| | avgTopElev | The average top elevation, in feet, of the landfill. | | Double | AF |
| D | avgTopElevUOM | The unit of measure used for the average top elevation. | foot | String (25) | AF |
| D | agencyType | Indicates the type of regulatory agency (i.e., state, federal, local). | For a list of domain values, see AgencyType in Appendix 1. | String (15) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |

Data Layer Specification – Solid Waste Landfill

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard . | String (5) | AF |

Data Layer Specification – Solid Waste Landfill

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |

Data Layer Specification – Solid Waste Landfill

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for SolidWasteLandfill_A is:

| Table Name | Identifier | Source |
|-----------------------|------------------------|----------------------|
| sw_SolidWasteLandfill | solidWasteLandfillIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Integrated Solid Waste, Solid Waste Landfill

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: ActionStatus | |
|---------------------------------|---|
| ATTRIBUTE NAME: actionStatus | |
| CODED DOMAIN | DEFINITION |
| complete | Efforts to correct or remove the environmental hazard are complete. |
| NA | Not Applicable: No value exists. |
| no | No, efforts to correct or remove the environmental hazard have not begun. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| yes | Yes, efforts are being made to correct or remove the environmental hazard. |

| DOMAIN TABLE NAME: AgencyType | |
|-------------------------------|---|
| ATTRIBUTE NAME: agencyType | |
| CODED DOMAIN | DEFINITION |
| city | City government agency or organization. |
| cntyParish | County or parish government agency or organization. |
| fedEPA | Federal government - Environmental Protection Agency. |
| fedOther | Federal government agency or organization other than the Environmental Protection Agency. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| state | State government agency or organization. |
| stDeptHealth | State health department or equivalent. |
| stDEQ | State department of environmental quality or equivalent. |
| stPubServ | State Public Service Commission |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: EnvReg | |
|---------------------------|---|
| ATTRIBUTE NAME: envReg | |
| CODED DOMAIN | DEFINITION |
| AHERA | Asbestos Hazard Emergency Response Act |
| CAA | Clean Air Act |
| CERCLA | Comprehensive Environmental Response, Compensation, and Liability Act (also known as Superfund) |
| CWA | Clean Water Act |
| ESA | Endangered Species Act |
| FIFRA | Federal Insecticide, Fungicide, and Rodenticide Act |
| NA | Not Applicable: No value exists. |
| NCA | Noise Control Act |
| NEPA | National Environmental Policy Act |
| NESHAPS | National Emission Standards For Hazardous Air Pollutants |
| NHPA | National Historic Preservation Act |
| OSHA | Occupational Safety And Health Act |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| RCRA | Resource Conservation And Recovery Act (General) |
| RCRAC | Resource Conservation And Recovery Act - Subtitle C: Hazardous Waste |

Data Layer Specification – Solid Waste Landfill

| DOMAIN TABLE NAME: EnvReg | |
|---------------------------|--|
| ATTRIBUTE NAME: envReg | |
| RCRAD | Resource Conservation And Recovery Act - Subtitle D: Nonhazardous Waste |
| RCRAI | Resource Conservation And Recovery Act - Subtitle I: Underground Storage Tanks |
| SDWA | Safe Drinking Water Act |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| TSCA | Toxic Substances Control Act |

| DOMAIN TABLE NAME: LandfillFeature | |
|------------------------------------|--|
| ATTRIBUTE NAME: landfillFeature | |
| CODED DOMAIN | DEFINITION |
| landfillArea | A site designed and managed for the land disposal of solid waste. |
| landfillCellArea | A designated storage area of an existing landfill for compacted non-hazardous solid waste. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: PermitStatus | |
|---------------------------------|---|
| ATTRIBUTE NAME: permitStatus | |
| CODED DOMAIN | DEFINITION |
| acquired | The parcel has been acquired. |
| cancelled | The parcel acquisition has been cancelled. |
| constructPermissued | A construction permit has been issued. |
| constructPermUnderRev | The construction permit application is under review. |
| disposed | The parcel has been disposed. |
| excessed | The parcel has been excessed. |
| expired | The parcel has expired. |
| limStorageFacilAppUnderRev | The limited storage facility application is under review. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| permAppNotCalledIn | The permit application has not been called in. |
| permAppNotSub | The permit application has not been submitted to the regulatory authority. |
| permAppUnderRev | The permit application is under review by the regulatory authority. |
| permDenied | The permit has been denied by the regulatory authority. |
| permExp | The permit has expired. |
| permIss | A permit has been issued by the regulatory authority. |
| permNotIss | A permit has not been issued. |
| permNotReq | A permit or closure is not required. |
| permReappUnderRev | A permit reapplication is under review by the regulatory authority. |
| permReq | The permit has been removed by the regulatory authority. |
| surplus | The parcel has been surplus. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| toBeAcq | The parcel is to be acquired. |

Data Layer Specification – Solid Waste Landfill

| DOMAIN TABLE NAME: SolidWasteStatus | |
|-------------------------------------|---|
| ATTRIBUTE NAME: landfillStatus | |
| CODED DOMAIN | DEFINITION |
| abandoned | Solid waste status is abandoned in place (not in use). |
| buried | Solid waste status is buried. |
| incomp | Solid waste status is incomplete or unfinished. |
| inServ | Solid waste status is in service and being used. |
| NA | Not Applicable: No value exists. |
| natural | Solid waste status is natural. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| perm | Solid waste status is permanent. |
| proposed | Solid waste status is proposed. |
| retired | Solid waste status is permanently retired, or taken out of service. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| temp | Solid waste status is temporary. |
| unknown | Solid waste status is unknown. |

| DOMAIN TABLE NAME: SolidWasteType | |
|-----------------------------------|--|
| ATTRIBUTE NAME: landfillType | |
| CODED DOMAIN | DEFINITION |
| bulk | Bulk Waste Accumulation Point/Dumpster |
| debris | Solid waste management landfill, incinerator, or other item is permitted or used for the disposal of nonhazardous construction debris and wood materials. |
| foodWste | Solid waste management landfill, incinerator, or other item is permitted or used for the disposal of pure food waste. |
| hazWste | Solid waste management landfill, incinerator, or other item is permitted or used for the disposal of hazardous waste. |
| indust | Solid waste management landfill, incinerator, or other item is permitted or used for the disposal of industrial solid waste. |
| militaryFamilyHousingGarbage | Military Family Housing Garbage Dumpster |
| militaryFamilyHousingOrganic | Military Family Housing Organic (Green/Yard Waste) Dumpster |
| militaryFamilyHousingRecycling | Military Family Housing Recycling Dumpster |
| NA | Not Applicable: No value exists. |
| organic | Organic (Green/Yard Waste) Dumpster |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| recycleCommodity | Solid waste management landfill, incinerator, or other item is permitted or used for the disposal of recyclable materials (beverage containers, cardboard boxes, etc). |
| sanitaryWste | Solid waste management landfill, incinerator, or other item is permitted or used for the disposal of household garbage, sanitary waste, and nonhazardous waste. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| toxicWste | Solid waste management landfill, incinerator, or other item is permitted or used for the disposal of toxic solid waste (including asbestos). |

| 6/23/2016 | SolidWasteManagement_20160623 | <ul style="list-style-type: none"> Updated “Positional Accuracy” section. |
| 3/13/2017 | SolidWasteManagement_20170310 | <ul style="list-style-type: none"> Updated all Air Force Standard attribute fields to match August 6, 2015 GeoBase Data Dictionary. Updated “Positional Accuracy” section. Updated “For Empty Text Values” subsection. Updated the “Representation” subsection of the “Data Layer Details” section. Updated the “Point Features” subsection of the “Geometry/Topology” section. |
| 6/8/2017 | SolidWasteManagement_20170608 | <ul style="list-style-type: none"> Updated the data layer update frequency in the “Sources and Source Selection” section. Updated “Data Steward POC” |
| 03/01/2018 | SolidWasteManagement_20180301 | <ul style="list-style-type: none"> Updated the “Definition”, “Geometry/Topology”, “Positional Accuracy”, “Attributes”, “Business Tables,” and “Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Attribute Domain Tables” sections. |

Data Layer Specification – Solid Waste Management

This Data Layer Specification (DLS) defines geospatial data specifications for the SolidWasteMgt_A and SolidWasteMgt_P data layers implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

A contained waste management system which contains, moves and disposes of solid waste in a variety of managed methods. This is container disposal or container recycling/composting to collection to storage to eventual disposal.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | SolidWasteMgt_A SolidWasteMgt_P |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalIntegratedSolidWaste |
| Previous Layer Names: | solid_waste_compactor_point solid_waste_compost_point solid_waste_incinerator_point solid_waste_recovery_point solid_waste_transfer_point solid_waste_dump_area solid_waste_stockpile_area SolidWasteManagement SolidWasteManagement_A |
| Geometry Type: | Polygon, Point |
| Data Steward Organization (Program Area): | Program Area: Integrated Solid Waste |
| Data Steward POC: | AFCEC/CZTQ Air Force Integrated Solid Waste Program SME |
| Representation: | <ul style="list-style-type: none">• Solid waste management areas are represented as closed polygons depicting the outermost extent of the area.• Each individual solid waste management area is represented by a single area feature.• A solid waste management area is represented as a point feature to symbolize sites at small scales.• All solid waste management points developed from areas shall represent the centroid of the site's area. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|--------------------------|--|
| HQ AF/A7CAN | <ul style="list-style-type: none"> • AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007 • AFI32-7062, Base Comprehensive Planning, 27 June 2013 • AFI32-7064, Integrated Natural Resources Management, 18 November 2014 • AFI32-7065, Managing Cultural Resources Management Program, 19 November 2014 • AFH32-9007, Managing Air Force Real Property, 1 May 1999 • AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 • The Resource Conservation and Recovery Act (RCRA) of 1976 • The Solid Waste Disposal Act of 1976 • Recycling Quality Assurance Plan • 40 Code of Federal Regulations 258 • 40 Code of Federal Regulations 60.750- 60.759 |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must not overlap. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |
| Point Features: |
| Points must be disjoint. |
| If a point represents a polygon feature, then the point must fall properly inside of the coinciding polygon. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on a bi-annual (6 month) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the bi-annual update. Additionally a bi-annual Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Data Layer Specification – Solid Waste Management

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the SolidWasteMgt_A and SolidWasteMgt_P layers will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the SolidWasteMgt_A and SolidWasteMgt_P data layers.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--|--|--|--------------------|----------|
| | solidWasteMgtIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Solid Waste Management site. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Solid Waste Management site that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize (Polygon geometry) | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM (Polygon geometry) | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize (Polygon geometry) | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM (Polygon geometry) | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude (Polygon geometry) | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |

Data Layer Specification – Solid Waste Management

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|--|--------------------|----------|
| | longitude <i>(Polygon geometry)</i> | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid <i>(Polygon geometry)</i> | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | latitude <i>(Point geometry)</i> | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude <i>(Point geometry)</i> | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | MGRS <i>(Point geometry)</i> | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation <i>(Point geometry)</i> | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM <i>(Point geometry)</i> | The unit of measure for elevation dimension. | foot | String (25) | AF |
| D | receptacleStructureType | The type of receptacle or structure used to manage solid waste (i.e., compost, incinerator, recovery). | For a list of domain values, see ReceptacleStructureType in Appendix 1. | String (30) | AF |

Data Layer Specification – Solid Waste Management

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|--|--------------------|----------|
| D | isAutoNotify | Indicates whether compactor sends an automated notification when full. Otherwise compactor has no remote notifications. | NA, no, TBD, yes | String (3) | AF |
| D | isEnclosed | Indicates whether the container is enclosed within a structure. | NA, no, TBD, yes | String (3) | AF |
| | receptacleCapacity | The capacity of the receptacle in cubic yards. | | Double | AF |
| D | solidWasteType | The type of solid waste collected. | For a list of domain values, see SolidWasteType in Appendix 1. | String (35) | AF |
| D | isForeignWaste | Indicates whether the container contains waste from a foreign country. | NA, no, TBD, yes | String (3) | AF |
| D | receptacleOwner | Identifies the owner of the receptacle. | For a list of domain values, see ReceptacleOwner in Appendix 1. | String (20) | AF |
| | solidWasteMgtSchedule | This value defines when contracted service will service the receptacle. | | String (25) | SDSFIE |
| | dateEst | The date on which the feature was originally established. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| | dateInspt | The date on which the feature was last inspected. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |

Data Layer Specification – Solid Waste Management

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|---|--|--------------------|----------|
| D | solidWasteStatus | The status of the subject item, from lists or entered from field inspections. | For a list of domain values, see SolidWasteStatus in Appendix 1. | String (10) | AF |
| | localEnvReg | Indicates the local (state, county and/or city) environmental regulation under which the feature is operated or permitted. | | String (100) | AF |
| | envReg | Indicates the federal environmental regulation the feature is operated and permitted under. | For a list of domain values, see EnvReg in Appendix 1. | String (10) | AF |
| | permitStatus | Indicates the status of the permit for the subject item. | For a list of domain values, see PermitStatus in Appendix 1. | String (30) | AF |
| | permitNum | Unique identification number of the operational permit received from the applicable federal, state, or local regulatory agency. | | String (50) | AF |
| | permitExp | Indicates the date on which the current permit expires. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| D | agencyType | Indicates the type of regulatory agency (i.e., state, federal, local). | For a list of domain values, see AgencyType in Appendix 1. | String (15) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |

Data Layer Specification – Solid Waste Management

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|---|--------------------|----------|
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |

Data Layer Specification – Solid Waste Management

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |

Data Layer Specification – Solid Waste Management

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business tables will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business tables for SolidWasteMgt_A and SolidWasteMgt_P are:

Data Layer Specification – Solid Waste Management

| Table Name | Identifier | Source |
|--------------------|-------------------|----------------------|
| sw_SolidWasteMgt | solidWasteMgtIDFK | Program Area Manager |
| sw_SolidWasteMgt_P | solidWasteMgtIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager. Data layer should include residential waste and should still be captured even if managed by a 3rd party agency.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Integrated Solid Waste, Solid Waste Management

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: AgencyType | |
|-------------------------------|---|
| ATTRIBUTE NAME: agencyType | |
| CODED DOMAIN | DEFINITION |
| city | City government agency or organization. |
| cntyParish | County or parish government agency or organization. |
| fedEPA | Federal government - Environmental Protection Agency. |
| fedOther | Federal government agency or organization other than the Environmental Protection Agency. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| state | State government agency or organization. |
| stDeptHealth | State health department or equivalent. |
| stDEQ | State department of environmental quality or equivalent. |
| stPubServ | State Public Service Commission |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: EnvReg | |
|---------------------------|---|
| ATTRIBUTE NAME: envReg | |
| CODED DOMAIN | DEFINITION |
| AHERA | Asbestos Hazard Emergency Response Act |
| CAA | Clean Air Act |
| CERCLA | Comprehensive Environmental Response, Compensation, and Liability Act (also known as Superfund) |
| CWA | Clean Water Act |
| ESA | Endangered Species Act |
| FIFRA | Federal Insecticide, Fungicide, and Rodenticide Act |
| NA | Not Applicable: No value exists. |
| NCA | Noise Control Act |
| NEPA | National Environmental Policy Act |
| NESHAPS | National Emission Standards For Hazardous Air Pollutants |
| NHPA | National Historic Preservation Act |
| OSHA | Occupational Safety And Health Act |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| RCRA | Resource Conservation And Recovery Act (General) |
| RCRAC | Resource Conservation And Recovery Act - Subtitle C: Hazardous Waste |
| RCRAD | Resource Conservation And Recovery Act - Subtitle D: Nonhazardous Waste |
| RCRAI | Resource Conservation And Recovery Act - Subtitle I: Underground Storage Tanks |
| SDWA | Safe Drinking Water Act |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| TSCA | Toxic Substances Control Act |

| DOMAIN TABLE NAME: PermitStatus | |
|---------------------------------|--|
| ATTRIBUTE NAME: permitStatus | |
| CODED DOMAIN | DEFINITION |
| acquired | The parcel has been acquired. |
| cancelled | The parcel acquisition has been cancelled. |

Data Layer Specification – Solid Waste Management

| DOMAIN TABLE NAME: PermitStatus | |
|---------------------------------|---|
| ATTRIBUTE NAME: permitStatus | |
| constructPermissued | A construction permit has been issued. |
| constructPermUnderRev | The construction permit application is under review. |
| disposed | The parcel has been disposed. |
| excessed | The parcel has been excessed. |
| expired | The parcel has expired. |
| limStorageFacilAppUnderRev | The limited storage facility application is under review. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| permAppNotCalledIn | The permit application has not been called in. |
| permAppNotSub | The permit application has not been submitted to the regulatory authority. |
| permAppUnderRev | The permit application is under review by the regulatory authority. |
| permDenied | The permit has been denied by the regulatory authority. |
| permExp | The permit has expired. |
| permIss | A permit has been issued by the regulatory authority. |
| permNotIss | A permit has not been issued. |
| permNotReq | A permit or closure is not required. |
| permReappUnderRev | A permit reapplication is under review by the regulatory authority. |
| permReq | The permit has been removed by the regulatory authority. |
| surplus | The parcel has been surplus. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| toBeAcq | The parcel is to be acquired. |

| DOMAIN TABLE NAME: ReceptacleOwner | |
|------------------------------------|--|
| ATTRIBUTE NAME: receptacleOwner | |
| CODED DOMAIN | DEFINITION |
| contractedLeased | The receptacle is owned by a contracted waste management company or is leased. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| USAFgovernment | The receptacle is owned by the US Air Force or the US government. |

| DOMAIN TABLE NAME: ReceptacleStructureType | |
|--|---|
| ATTRIBUTE NAME: receptacleStructureType | |
| CODED DOMAIN | DEFINITION |
| foodWasteCompost | A receptacle or structure specifically designed and operated for the purpose of reducing food waste to decayed organic matter. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| solidWasteCompactor | A structure containing a device which compresses solid waste. |
| solidWasteCompost | A receptacle or structure specifically designed and operated for the purpose of reducing solid waste to decayed organic matter. |
| solidWasteDumpster | A dumpster type receptacle used for the collection of solid waste. |
| solidWasteIncinerator | Furnace or container for disposal of solid waste by burning at high temperature. |
| solidWasteRecovery | A receptacle or structure where solid waste materials are collected for recycling. |
| solidWasteRolloff | A roll-off type receptacle without a compactor used for the collection of solid waste. |
| solidWasteRolloffCompactor | A roll-off type receptacle with a compactor used for the collection of solid waste. |
| solidWasteTransferStation | Area or structure where solid waste is transferred from a collection truck or receptacle to another truck or receptacle for transporting to a disposal or treatment facility. |

Data Layer Specification – Solid Waste Management

| DOMAIN TABLE NAME: ReceptacleStructureType | |
|--|---|
| ATTRIBUTE NAME: receptacleStructureType | |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: SolidWasteStatus | |
|-------------------------------------|---|
| ATTRIBUTE NAME: solidWasteStatus | |
| CODED DOMAIN | DEFINITION |
| abandoned | Solid waste status is abandoned in place (not in use). |
| buried | Solid waste status is buried. |
| incomp | Solid waste status is incomplete or unfinished. |
| inServ | Solid waste status is in service and being used. |
| NA | Not Applicable: No value exists. |
| natural | Solid waste status is natural. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| perm | Solid waste status is permanent. |
| proposed | Solid waste status is proposed. |
| retired | Solid waste status is permanently retired, or taken out of service. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| temp | Solid waste status is temporary. |
| unknown | Solid waste status is unknown. |

| DOMAIN TABLE NAME: SolidWasteType | |
|-----------------------------------|--|
| ATTRIBUTE NAME: solidWasteType | |
| CODED DOMAIN | DEFINITION |
| bulk | Bulk Waste Accumulation Point/Dumpster |
| debris | Solid waste management landfill, incinerator, or other item is permitted or used for the disposal of nonhazardous construction debris and wood materials. |
| foodWste | Solid waste management landfill, incinerator, or other item is permitted or used for the disposal of pure food waste. |
| hazWste | Solid waste management landfill, incinerator, or other item is permitted or used for the disposal of hazardous waste. |
| indust | Solid waste management landfill, incinerator, or other item is permitted or used for the disposal of industrial solid waste. |
| militaryFamilyHousingGarbage | Military Family Housing Garbage Dumpster |
| militaryFamilyHousingOrganic | Military Family Housing Organic (Green/Yard Waste) Dumpster |
| militaryFamilyHousingRecycling | Military Family Housing Recycling Dumpster |
| NA | Not Applicable: No value exists. |
| organic | Organic (Green/Yard Waste) Dumpster |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| recycleCommodity | Solid waste management landfill, incinerator, or other item is permitted or used for the disposal of recyclable materials (beverage containers, cardboard boxes, etc). |
| sanitaryWste | Solid waste management landfill, incinerator, or other item is permitted or used for the disposal of household garbage, sanitary waste, and nonhazardous waste. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| toxicWste | Solid waste management landfill, incinerator, or other item is permitted or used for the disposal of toxic solid waste (including asbestos). |

Data Layer Specification – Storage Tank

This Data Layer Specification (DLS) defines geospatial data specifications for the StorageTank_P data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

A receptacle or chamber used for storing bulk commodities or fuels. This data layer contains both above and underground tanks. If 90% or more of the tank is located above the surface of the ground it must be considered an above ground tank. If more than 10% of the tank is located below the ground surface it must be considered an underground tank.

Storage tanks with a capacity of 55 gallons or greater that hold a petroleum, oil, or lubricant (POL) product and are in-service or out-of-service should be included in this data layer. The following table identifies a series of tank contents and a determination of whether they should be included in this data layer.

| Content Type | Included In Data Layer |
|---|------------------------|
| #1 fuel oil | Yes |
| #2 fuel oil | Yes |
| #3 fuel oil | Yes |
| #4 fuel oil | Yes |
| #5 fuel oil | Yes |
| #6 fuel oil | Yes |
| 1010 jet engine oil | Yes |
| Acid solution | No |
| AFFF/HEF | No |
| Alternative fuel e85 | Yes |
| Antifreeze | No |
| Automatic transmission fluid | Yes |
| Aviation gasoline | Yes |
| Aviation turbine fuel grade JP-10 | Yes |
| Aviation turbine fuel grade JP-4 | Yes |

Geometry/Topology

| Point Features: |
|--------------------------|
| Points must be disjoint. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on a quarterly (3 month) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the quarterly update. Additionally a quarterly Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Data should only represent tanks containing Petroleum, Oil, and Lubricants (POL) product. Tanks containing other products such as waste water, de-icing fluid, propane, or other non-POL products should not be included in the data set. The status of the tank may either be “In Service” or “Out of Service” (valid tankStatus domain values include “inactive”, “inUse”, or “outOfService”). Out of Service tanks are those that are still in place, but have been temporarily closed and are available for future use, or are planned for future removal. Tanks must have a capacity of 55 gallons or more. Smaller capacity tanks will not be included in the data set. Bowser, portable, or otherwise mobile tanks will not be included in the data set.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west-most spatial extents of the StorageTank_P layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the StorageTank_P data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------|--|----------------|--------------------|----------|
| | storageTankIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |

Data Layer Specification – Storage Tank

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------------------|--|--|--------------------|----------|
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Allowed values can be obtained from STAR database. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Allowed values can be obtained from STAR database. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | latitude | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | MGRS | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | starID | The unique storage tank ID from STAR. | Allowed values can be obtained from STAR database. | String (50) | AF |
| | realPropertyUniqueIdentifier | The real property unique identifier (RPUID) is a non-intelligent code used to permanently and uniquely identify a real property asset. Source: RPIM 3.0, extracted 4/2009. | Allowed values can be obtained from STAR database. | String (18) | AF |

Data Layer Specification – Storage Tank

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------|---|--|--------------------|----------|
| | facilityID | The facility ID number. | Allowed values can be obtained from STAR database. | String (100) | AF |
| | localDesignator | Any local designation, common name or alias for the tank as identified by the installation or other agency. | | String (150) | AF |
| D | isRegulated | Indicates whether the feature is regulated by Federal, State or local jurisdiction or no regulation. | Allowed values can be obtained from STAR database. NA, no, TBD, yes | String (3) | AF |
| D | isRegCAA | Indicates whether the tank is regulated under the Clean Air Act. | NA, no, TBD, yes | String (3) | AF |
| D | isRegCWA | Indicates whether the tank is regulated under the Clean Water Act. | NA, no, TBD, yes | String (3) | AF |
| D | isRegOPPA | Indicates whether the tank is regulated under the Oil Pollution Prevention Act. | NA, no, TBD, yes | String (3) | AF |
| D | isRegRCRA | Indicates whether the tank is regulated under the Resource Conservation and Recovery Act. | Allowed values can be obtained from STAR database. NA, no, TBD, yes | String (3) | AF |
| D | isRegOther | Indicates whether the tank is regulated under other authority (e.g. STI, industry standards, specific local/regional laws, etc.). Provide specifics in the narrative field. | NA, no, TBD, yes | String (3) | AF |

Data Layer Specification – Storage Tank

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------------|---|---|--------------------|----------|
| D | stiCategory | A descriptor that identifies the STI category for each tank. | Allowed values can be obtained from STAR database. For the list of domain values see STIcategory in Appendix 1. | String (5) | AF |
| D | isSPCC | Indicates whether the tank should be included in the SPCC. | Allowed values can be obtained from STAR database. NA, no, TBD, yes | String (3) | AF |
| D | dlaManaged | Indicates tanks that store Defense Logistics Agency capitalized fuel. | Allowed values can be obtained from STAR database. NA, no, TBD, yes | String (3) | AF |
| D | isPermitRegister | Indicates whether the tank is permitted or registered or not. | Allowed values can be obtained from STAR database. NA, no, TBD, yes | String (3) | AF |
| | permitRegisterNum | Unique identification number of the operational permit or registration received from the applicable federal, state, or local regulatory agency. | Allowed values can be obtained from STAR database. | String (50) | AF |
| | permitRegisterDate | The date on which the tank was permitted or registered. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | Allowed values can be obtained from STAR database. | Integer (Long) | AF |
| | permitRegisterExp | Indicates the date on which the current permit or registration expires. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | Allowed values can be obtained from STAR database. | Integer (Long) | AF |
| D | permitRegisterStatus | Indicates the status of the permit or registration for the subject item. | For the list of domain values see TankPermitStatus in Appendix 1. | String (15) | AF |

Data Layer Specification – Storage Tank

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|--|--------------------|----------|
| | dateInstalled | Indicates the date on which the feature was/is to be installed. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | Allowed values can be obtained from STAR database. | Integer (Long) | AF |
| | dateCertified | Indicates the date on which the tank was certified. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| D | tankStatus | A descriptor of the status of the tank. | Allowed values can be obtained from STAR database. For the list of domain values see TankStatus in Appendix 1. | String (15) | AF |
| | dateRemoved | Indicates the date on which the tank was/is to be removed. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| D | tankContents | A descriptor of the contents of the tank. | Allowed values can be obtained from STAR database. For the list of domain values see TankContents in Appendix 1. | String (20) | AF |
| | tankManufacturer | The tank manufacturer. | Allowed values can be obtained from STAR database. | String (100) | AF |
| | manufactDate | Indicates the manufacture date of the tank. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | Allowed values can be obtained from STAR database. | Integer (Long) | AF |

Data Layer Specification – Storage Tank

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| | modelNum | The model number of the tank. | Allowed values can be obtained from STAR database. | String (60) | AF |
| | serialNum | The serial number on the tank. | Allowed values can be obtained from STAR database. | String (75) | AF |
| D | isNamePlateLegible | Indicates whether the name plate on the tank is legible. | Allowed values can be obtained from STAR database. NA, no, TBD, yes | String (3) | AF |
| D | areNFPAPlacardsCompliant | Indicates whether the NFPA placards are properly affixed and legible on the tank. | NA, no, TBD, yes | String (3) | AF |
| D | isUnderground | Indicates whether the tank is an underground storage tank. If false, the assumption is the tank is an above ground storage tank. | Allowed values can be obtained from STAR database. NA, no, TBD, yes | String (3) | AF |
| D | tankType | The primary type of tank. | For the list of domain values see TankType in Appendix 1. | String (20) | AF |
| D | tankMaterial | A descriptor of the type of material of the tank. | Allowed values can be obtained from STAR database. For the list of domain values see TankMaterial in Appendix 1. | String (15) | AF |
| D | pipngType | A descriptor of the primary/majority type of piping used. | For the list of domain values see PipingType in Appendix 1. | String (20) | AF |
| D | pipngMaterial | A descriptor of the material composition of the pipe. | Allowed values can be obtained from STAR database. For the list of domain values see PipingMaterial in Appendix 1. | String (15) | AF |

Data Layer Specification – Storage Tank

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|---|--------------------|----------|
| D | isPressurized | Indicates whether the tank is pressurized. | Allowed values can be obtained from STAR database. NA, no, TBD, yes | String (3) | AF |
| D | isContained | Indicates whether the tank is surrounded by secondary containment. | Allowed values can be obtained from STAR database. NA, no, TBD, yes | String (3) | AF |
| D | containType | The primary type of secondary containment used for the tank if a spill or leak were to occur. | Allowed values can be obtained from STAR database. For the list of domain values see ContainType in Appendix 1. | String (20) | AF |
| | containDescript | A description of the secondary containment for the tank. Include containment method and capacity in the description. | | String (255) | AF |
| D | meetsContainCap | Indicates whether the secondary containment meets requirements (100% of the largest tank plus freeboard). | NA, no, TBD, yes | String (3) | AF |
| D | isLeakDetection | Indicates whether the tank has the required leak detection. | Allowed values can be obtained from STAR database. NA, no, TBD, yes | String (3) | AF |
| | leakDetectDescript | A description of the tank's leak detection sensor. | | String (100) | AF |
| D | isLeakDetectCompliant | Indicates whether the leak detection system is compliant/meets standards and in operable condition. | NA, no, TBD, yes | String (3) | AF |

Data Layer Specification – Storage Tank

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-------------------------|--|--|--------------------|----------|
| D | isSpillProtection | Indicates whether the tank has the required spill protection system. | Allowed values can be obtained from STAR database. NA, no, TBD, yes | String (3) | AF |
| | spillProtectDescript | A description of the spill protection system. | | String (255) | AF |
| D | isSpillProtectCompliant | Indicates whether the spill protection is compliant/meets standards and in operable condition. | NA, no, TBD, yes | String (3) | AF |
| D | vaporContr | A descriptor of the primary vapor control. | Allowed values can be obtained from STAR database. For the list of domain values see VaporContr in Appendix 1. | String (15) | AF |
| D | tankRoofType | A descriptor of the type of roof. | Allowed values can be obtained from STAR database. For the list of domain values see RoofType in Appendix 1. | String (20) | AF |
| | tankHeight | The height of the tank in feet. | Allowed values can be obtained from STAR database. | Double | AF |
| | tankLength | The length of the tank in feet. | Allowed values can be obtained from STAR database. | Double | AF |
| | tankWidth | The width of the tank in feet. | Allowed values can be obtained from STAR database. | Double | AF |
| | tankDiameter | The diameter of the tank in feet. | Allowed values can be obtained from STAR database. | Double | AF |
| D | tankDimensionUOM | The unit of measure used for the tank dimensions. | foot | String (25) | AF |

Data Layer Specification – Storage Tank

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|---|---|--------------------|----------|
| | tankDepth | The depth of the tank, in feet, measured as the distance from the ground surface to the bottom of the tank. | | Double | AF |
| D | tankDepthUOM | The unit of measure used for tank depth. | foot | String (25) | AF |
| | tankCapacity | The usable tank capacity in gallons. | Allowed values can be obtained from STAR database. | Double | AF |
| D | tankCapacityUOM | The unit of measure for tank capacity. | usGallon | String (20) | AF |
| | ratedCapacity | The rated tank capacity in gallons. | | Double | AF |
| D | ratedCapacityUOM | The unit of measure for rated capacity data. | usGallon | String (20) | AF |
| D | tankColor | The color of the tank. | Allowed values can be obtained from STAR database. For the list of domain values see TankColor in Appendix 1. | String (10) | AF |
| | accessRestricted | A descriptor indicating whether access to the tank is restricted (e.g. flightline, controlled, secured, or other security). | | String (150) | AF |
| | orgID | ID or symbol of the organization owning the tank. | | String (50) | AF |
| | business | The business or organization utilizing the tank system. | | String (100) | AF |
| | businessID | The ID of the business or organization utilizing the tank system. | | String (20) | AF |
| | poc | The point of contact for the tank. | Allowed values can be obtained from STAR database. | String (50) | AF |

Data Layer Specification – Storage Tank

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| | tankCorrosion | A descriptor of any corrosion occurring on or in the tank. | | String (150) | AF |
| | pipeCorrosion | A descriptor of any corrosion occurring on the piping. | | String (150) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |

Data Layer Specification – Storage Tank

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |

Data Layer Specification – Storage Tank

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |

Data Layer Specification – Storage Tank

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|------------------------|----------------|--------------------|----------|
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |

Business Tables

The business tables will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for StorageTank_P is:

| Table Name | Identifier | Source |
|------------------|------------|----------------------|
| et_StorageTank_P | starID | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Data Layer Specification – Storage Tank

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Storage Tanks, Storage Tank

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: ContainType | |
|--------------------------------|---|
| ATTRIBUTE NAME: containType | |
| CODED DOMAIN | DEFINITION |
| berm | Containment type is a berm. |
| concreteConstruct | Containment type is a constructed concrete structure. |
| concreteCurb | Containment type is a constructed concrete curb. |
| concreteDike | Containment type is a concrete dike. |
| concreteVault | Containment type is a concrete vault tank. |
| doubleBottom | Containment type is double bottom. |
| doubleWalled | Containment type is double-walled tank. |
| integral | Containment type is integral to the tank construction. |
| metalPan | Containment type is a metal pan. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| plasticPanSystem | Containment type is a plastic pan containment system. |
| portableContain | Containment type is a portable containment device. |
| remoteImpound | Containment type is a remote impoundment. |
| responseCapability | Containment type is response capability to include deployment of spill kits and use of internal response resources for initial spill. |
| spillPan | Containment type is a spill pan. |
| steelDike | Containment type is a steel dike. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: PipingMaterial | |
|-----------------------------------|---|
| ATTRIBUTE NAME: pipingMaterial | |
| CODED DOMAIN | DEFINITION |
| aluminum | Piping material consists of aluminum. |
| brass | Piping material consists of brass. |
| castIron | Piping material consists of cast iron. |
| copper | Piping material consists of copper. |
| fiberglass | Piping material consists of fiberglass. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| plastic | Piping material consists of plastic. |
| rubber | Piping material consists of rubber. |
| stainlessSteel | Piping material consists of stainless steel. |
| steel | Piping material consists of steel. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: PipingType | |
|-------------------------------|---|
| ATTRIBUTE NAME: pipingType | |
| CODED DOMAIN | DEFINITION |
| flangeAndThreadPipe | Piping type is flanged and threaded pipe. |
| flexible | Piping type is flexible. |
| hose | Piping type is hose. |

Data Layer Specification – Storage Tank

| DOMAIN TABLE NAME: PipingType | |
|-------------------------------|---|
| ATTRIBUTE NAME: pipingType | |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| rigid | Piping type is rigid. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| threadedPipe | Piping type is threaded pipe. |

| DOMAIN TABLE NAME: STICategory | |
|--------------------------------|---|
| ATTRIBUTE NAME: stiCategory | |
| CODED DOMAIN | DEFINITION |
| 1 | The STI category is 1 - ASTs with spill control and continuous release detection monitoring (CRDM). |
| 2 | The STI category is 2 - ASTs with spill control but without continuous release detection monitoring (CRDM). |
| 3 | The STI category is 3 - ASTs without spill control or continuous release detection monitoring (CRDM). |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: TankColor | |
|------------------------------|---|
| ATTRIBUTE NAME: tankColor | |
| CODED DOMAIN | DEFINITION |
| black | The tank color is black. |
| blue | The tank color is blue. |
| brown | The tank color is brown. |
| combo | The tank is a combination of colors. |
| cream | The tank color is cream. |
| gray | The tank color is gray. |
| green | The tank color is green. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| purple | The tank color is purple. |
| red | The tank color is red. |
| silver | The tank color is silver. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| white | The tank color is white. |
| yellow | The tank color is yellow. |

| DOMAIN TABLE NAME: TankContents | |
|---------------------------------|---|
| ATTRIBUTE NAME: tankContents | |
| CODED DOMAIN | DEFINITION |
| acidSolution | Tank contains an acid solution. |
| afffHEF | Tank contains aqueous film forming foam / high expansion foam (AFFF / HEF). |
| alcoholWater | Tank contains a mixture of alcohol and water. |
| antiFreeze | Tank contains anti-freeze. |
| autoTransFluid | Tank contains automatic transmission fluid. |

Data Layer Specification – Storage Tank

| DOMAIN TABLE NAME: TankContents | |
|---------------------------------|--|
| ATTRIBUTE NAME: tankContents | |
| avGasoline | Tank contains aviation gasoline. |
| burnerFuel1 | Tank contains burner fuel No. 1. |
| burnerFuel2 | Tank contains burner fuel No. 2. |
| burnerFuel3 | Tank contains burner fuel No. 3. |
| burnerFuel4 | Tank contains burner fuel No. 4. |
| burnerFuel5 | Tank contains burner fuel No. 5. |
| burnerFuel6 | Tank contains burner fuel No. 6. |
| calibrationFluidNOC | Tank contains calibration fluid that is not otherwise classified. |
| causticSolution | Tank contains a caustic solution. |
| chemicals | Tank contains chemicals (please list actual chemicals in the feature description). |
| cleaningCompoundNOC | Tank contains cleaning compound that is not otherwise classified. |
| cng | Tank contains compressed natural gas (CNG). |
| compressedAir | Tank contains compressed air. |
| compressorOil | Tank contains compressor oil. |
| deicing | Tank contains deicing fluid. |
| dielectricOil | Tank contains non-conducting dielectric oil. |
| dieselFuel | Tank contains diesel fuel. This includes auto diesel, bio diesel, marine diesel, or any other form of diesel fuel. |
| domesticWstewtr | Tank contains domestic wastewater. |
| e85 | Tank contains alternative fuel E85. |
| ethanol | Tank contains ethanol. |
| fireProtectWtr | Tank contains fire protection water. |
| gasoline | Tank contains gasoline. This includes any form of gasoline. |
| hydraulicFluid | Tank contains hydraulic fluid. |
| hydrazine | Tank contains hydrazine - water (H-70). |
| jetAA1 | Tank contains aviation turbine fuel Jet A or Jet A-1. |
| jetB | Tank contains aviation turbine fuel Jet B. |
| jetEngineOil1010 | Tank contains jet engine oil 1010. |
| jetFT | Tank contains aviation turbine fuel Jet FT. |
| jp10 | Tank contains aviation turbine fuel Grade JP-10. |
| jp4 | Tank contains aviation turbine fuel Grade JP-4. |
| jp5 | Tank contains aviation turbine fuel Grade JP-5. |
| jp7 | Tank contains aviation turbine fuel Grade JP-7. |
| jp8 | Tank contains aviation turbine fuel Grade JP-8. |
| jp8-100Additive | Tank contains aviation turbine fuel Grade JP-8 + 100 additive. |
| jpts | Tank contains aviation turbine fuel, thermally stable. |
| kerosene | Tank contains kerosene. |
| liquidNitrogen | Tank contains liquid nitrogen. |
| lng | Tank contains liquefied natural gas (LNG). |
| lpg | Tank contains liquefied petroleum gas (LPG). |
| lubricatingOilNOC | Tank contains lubricating oil that is not otherwise classified. |
| mineralOil | Tank contains mineral oil. |
| motorOil | Tank contains motor oil. |
| NA | Not Applicable: No value exists. |
| nonHazWstePaintMat | Tank contains non-hazardous waste paint related material. |
| nonPotWtr | Tank contains non-potable water. |
| o250 | Tank contains steam turbine lubricating oils [0-250], [MIL-PRF-17331]. |
| o278 | Tank contains lubricating oils [0-278], [MIL-PRF-9000]. |
| offSpecFuel | Tank contains off-spec fuel. |
| oilyWstewtr | Tank contains oily wastewater. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| otto | Tank contains OTTO Fuels. |

Data Layer Specification – Storage Tank

| DOMAIN TABLE NAME: TankContents | |
|---------------------------------|---|
| ATTRIBUTE NAME: tankContents | |
| pesticideHerbicide | Tank contains pesticide or herbicide. |
| potWtr | Tank contains potable water. |
| preservationOil | Tank contains preservation oil. |
| propane | Tank contains propane. |
| rawWtr | Tank contains raw water. |
| reclaimedFuel | Tank contains reclaimed fuel. |
| reclaimedJP8-100 | Tank contains reclaimed JP-8 + 100. |
| saltwater | Tank contains saltwater. |
| solventNOC | Tank contains solvent that is not otherwise classified. |
| stormwater | Tank contains stormwater. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| treatedWtr | Tank contains treated water. |
| usedCookingOil | Tank contains used cooking oil. |
| usedOil | Tank contains used oil. |
| usedPetro | Tank contains used petroleum. |
| usedPetroProd | Tank contains used petroleum products. |
| usedPOLEng-HydJP8 | Tank contains used POL Eng/Hyd JP-8. |
| usedPOLEng-HydOil | Tank contains used POL Eng/Hyd oil. |
| wastewater | Tank contains wastewater. This excludes domestic wastewater. |
| wsteFuel | Tank contains waste fuel. |
| wsteOil | Tank contains waste oil. |

| DOMAIN TABLE NAME: TankMaterial | |
|---------------------------------|---|
| ATTRIBUTE NAME: tankMaterial | |
| CODED DOMAIN | DEFINITION |
| aluminum | Tank is constructed from aluminum. |
| carbonFiber | Tank is constructed from carbon fiber. |
| carbonSteel | Tank is constructed from carbon steel. |
| composite | Tank is constructed from composite. |
| concrete | Tank is constructed from concrete. |
| fiberglass | Tank is constructed from fiberglass. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| plastic | Tank is constructed from plastic. |
| polyethylene | Tank is constructed from polyethylene. |
| stainlessSteel | Tank is constructed from stainless steel. |
| steelConcrete | Tank is constructed from a combination of steel and concrete. |
| steelFiberglass | Tank is constructed from a combination of steel and fiberglass. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| thermoplastic | Tank is constructed from thermoplastic. |
| unknown | Tank is constructed from an unknown material. |

| DOMAIN TABLE NAME: TankPermitStatus | |
|--------------------------------------|--|
| ATTRIBUTE NAME: permitRegisterStatus | |
| CODED DOMAIN | DEFINITION |
| appNotSub | The permit or registration application has not been submitted to the regulatory authority. |
| appUnderRev | The permit or registration application is under review by the regulatory authority. |

Data Layer Specification – Storage Tank

| DOMAIN TABLE NAME: TankPermitStatus | |
|--------------------------------------|---|
| ATTRIBUTE NAME: permitRegisterStatus | |
| denied | The permit or registration has been denied by the regulatory authority. |
| expired | The permit or registration has expired. |
| issued | A permit or registration has been issued by the regulatory authority. |
| NA | Not Applicable: No value exists. |
| notIssued | A permit or registration has not been issued. |
| notReq | A permit or registration is not required. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| reappUnderRev | A permit or registration reapplication is under review by the regulatory authority. |
| removed | The permit or registration has been removed by the regulatory authority. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: TankRoofType | |
|---------------------------------|---|
| ATTRIBUTE NAME: tankroofType | |
| CODED DOMAIN | DEFINITION |
| buttWeld | Roof type is butt welded. |
| buttWeldCone | Roof type is butt welded cone. |
| domedExternFloat | Roof type is domed external floating roof. |
| domedFixed | Roof type is domed fixed roof. |
| domedInternFloat | Roof type is domed internal floating roof. |
| externFloat | Roof type is external floating roof. |
| flat | Roof type is flat. |
| flatHeads | Roof type is flat heads. |
| flatWLid | Roof type is flat with lid. |
| horizExternFloat | Roof type is horizontal external floating roof. |
| horizFixed | Roof type is horizontal fixed roof. |
| horizInternFloat | Roof type is horizontal internal floating roof. |
| internFloat | Roof type is internal floating roof. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| plasticLid | Roof type is plastic lid. |
| pressDome | Roof type is pressed dome. |
| pressHeads | Roof type is pressed heads. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| vertExternFloat | Roof type is vertical external floating roof. |
| vertFixed | Roof type is vertical fixed roof. |
| vertInternFloat | Roof type is vertical internal floating roof. |

| DOMAIN TABLE NAME: TankStatus | |
|-------------------------------|---|
| ATTRIBUTE NAME: tankStatus | |
| CODED DOMAIN | DEFINITION |
| abandoned | Tank is permanently out of service and has not been removed or "closed" in accordance with the appropriate environmental regulations. |
| closedInPlace | Tank was permanently taken out of service, filled with inert material, left in place, site has been closed in accordance with appropriate environmental regulations. |
| closedRemoved | Tank was permanently taken out of service, has been removed, and the tank site has been closed in accordance with all appropriate environmental regulations. |
| filled | Tank was permanently taken out of service, filled with inert material, left in place, site was not closed in accordance with current appropriate environmental regulations. |

Data Layer Specification – Storage Tank

| DOMAIN TABLE NAME: TankStatus | |
|-------------------------------|--|
| ATTRIBUTE NAME: tankStatus | |
| inactive | Tank is temporarily inactive, but is available for future service. |
| inUse | Tank is currently in service or active use. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| outOfService | Tank is temporarily out of service, but is available for future service or removal/replacement. |
| removed | Tank was permanently taken out of service and removed, but the tank site was not closed in accordance with all current applicable environmental regulations. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: TankType | |
|-----------------------------|---|
| ATTRIBUTE NAME: tankType | |
| CODED DOMAIN | DEFINITION |
| astInBldg | The tank is an aboveground storage tank inside a building. |
| astOutBldg | The tank is an aboveground storage tank outside a building. |
| bowser | The tank is a bowser tank. |
| chemical | The tank is a chemical tank. |
| elevated | The tank is an elevated tank. |
| fuel | The tank is a fuel tank. |
| highPress | The tank is a high pressure tank. |
| highTherm | The tank is a high thermal tank. |
| horizCylind | The tank is a horizontal cylindrical tank. |
| horizRect | The tank is a horizontal rectangular tank. |
| mobile | The tank is a mobile tank. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| ows | The tank is an oil/water separator. |
| portable | The tank is a portable tank. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| vertCylind | The tank is a vertical cylindrical tank. |
| vertRect | The tank is a vertical rectangular tank. |

| DOMAIN TABLE NAME: VaporContr | |
|-------------------------------|---|
| ATTRIBUTE NAME: vaporContr | |
| CODED DOMAIN | DEFINITION |
| EV | Vapor control consists of an emergency vent. |
| IFR | Vapor control consists of an internal floating roof. |
| NA | Not Applicable: No value exists. |
| none | Vapor control does not exist. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| PEV | Vapor control consists of a primary emergency vent. |
| pressVac | Vapor control consists of a pressure vacuum. |
| pressVent | Vapor control consists of a pressure vent. |
| SEV | Vapor control consists of a secondary emergency vent. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| ventOpenToAtmos | Vapor control consists of a vent open to atmosphere. |

**Data Layer Specifications for:
Environmental Water
Quality Permit**

**United States Air Force
Environmental GIS Program**

Revision History

| Date: | Version: | Description of Revision: |
|------------|--|---|
| 12/12/2016 | EnvironmentalWater QualityPermit _20161212 | <ul style="list-style-type: none"> Removed “the vertical datum shall be Mean Sea Level (MSL_Height),” from the Coordinate System section. |
| 6/23/2016 | EnvironmentalWater QualityPermit _20160623 | <ul style="list-style-type: none"> Added authoritative source language to the “Allowed Values” column under “Attributes” section. Updated “Positional Accuracy” section. |
| 3/9/2017 | EnvironmentalWater QualityPermit _20170310 | <ul style="list-style-type: none"> Updated all Air Force Standard attribute fields to match August 6, 2015 GeoBase Data Dictionary. Updated “Positional Accuracy” section. Updated “For Empty Text Values” subsection. |
| 6/8/2017 | EnvironmentalWater QualityPermit _20170608 | <ul style="list-style-type: none"> Updated the data layer update frequency in the “Sources and Source Selection” section. Updated “Data Steward POC” |
| 03/01/2018 | EnvironmentalWater QualityPermit _20180301 | <ul style="list-style-type: none"> Updated the “Definition”, “Geometry/Topology”, “Positional Accuracy”, “Attributes”, “Business Tables,” and “Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Attribute Domain Tables” sections. |

Data Layer Specification – Environmental Water Quality Permit

This Data Layer Specification (DLS) defines geospatial data specifications for the EnvWtrQualPermit_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

The boundary of a water system to which a water pollution control permit applies for water quality.

Only Clean Water Act permits should be included in this data layer. Permits associated with Safe Drinking Water Act should not be included in this data layer.

Data Layer Details

| | |
|--|---|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | EnvWtrQualPermit_A |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalWaterQuality |
| Previous Layer Names: | None |
| Geometry Type: | Polygon |
| Data Steward Organization (Program Area): | Program Area: Environmental Water Quality |
| Data Steward POC: | AFCEC/CZTQ Air Force Environmental Water Quality Program SME |
| Representation: | <ul style="list-style-type: none">• Environmental water quality permit areas are represented as closed polygons depicting the outermost extent of the area.• Each individual environmental water quality permit is represented by a single area feature. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|---------------------------------|---|
| HQ AF/A7CAN | <ul style="list-style-type: none">• AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007• AFI32-7062, Comprehensive Planning, 27 June 2013• AFI32-7064, Integrated Natural Resources Management, 18 November 2014• AFI32-7065, Managing Cultural Resources Management Program, 19 November 2014• AFH32-9007, Managing Air Force Real Property, 1 May 1999• AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996• AFI32-7047, Water and Fuel Systems |

| Implementing Program(s): | Driver(s): |
|--------------------------|--|
| | <ul style="list-style-type: none"> • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on a quarterly (3 month) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the quarterly update. Additionally a quarterly Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Currently, only stormwater and wastewater permits will be included in this layer. Drinking water permits will not be included. Attributes specific to drinking water permits (indicated in the Attributes section below) should be populated with “NA” or its equivalent. If drinking water permits are included in the future these attributes will be populated accordingly.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **6 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Data Layer Specification – Environmental Water Quality Permit

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the EnvWtrQualPermit_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the EnvWtrQualPermit_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|---|--------------------|----------|
| | envWtrQualPermitIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Allowed values can be obtained from WET database. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Allowed values can be obtained from WET database. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |

Data Layer Specification – Environmental Water Quality Permit

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|---|--------------------|----------|
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acres | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | wetPermitID | The unique identifier for each EnvWtrQualPermit feature. This is the permit ID from the WET database for wastewater, storm water, and other permitted sources, or the PWS ID from the WET database for drinking water. | Allowed values can be obtained from WET database. | String (50) | AF |

Data Layer Specification – Environmental Water Quality Permit

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---------------------|---|--|--------------------|----------|
| D | envSystemType | Identifies the type of water system for the specific feature. | Allowed values can be obtained from WET database. For the list of domain values see EnvSystemType in Appendix 1. | String (10) | AF |
| D | regulatedEntityType | A descriptor to indicate the type of regulated entity. | Allowed values can be obtained from WET database. For the list of domain values see RegulatedType in Appendix 1. | String (20) | AF |
| | populationServed | A number indicating the total population served by the drinking water system. | Specific to drinking water permits. Populate with 77777. | Integer (Long) | AF |
| D | grantingAuthority | A descriptor that indicates the granting authority for the permit. | Allowed values can be obtained from WET database. For the list of domain values see GrantingAuthority in Appendix 1. | String (5) | AF |
| | authorityName | A descriptor indicating the name of the authority granting the permit. | Allowed values can be obtained from WET database. | String (80) | AF |
| | effectDate | The effective date of the permit. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | Allowed values can be obtained from WET database. | Integer (Long) | AF |
| | expireDate | The expiration date of the permit. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | Allowed values can be obtained from WET database. | Integer (Long) | AF |
| | systemOwnerContact | Identifies the name and phone number of the treatment work owner. | Allowed values can be obtained from WET database. | String (100) | AF |

Data Layer Specification – Environmental Water Quality Permit

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------------|---|---|--------------------|----------|
| D | isContractorOperated | Indicates if the system is being operated by a contractor for the AF. | Allowed values can be obtained from WET database. NA, no, TBD, yes | String (3) | AF |
| D | drainageSourceType | General type of drainage to the feature or source of drinking water. | Allowed values can be obtained from WET database. For the list of domain values see DrainageSourceType in Appendix 1. | String (20) | AF |
| D | dischargePntType | A description that identifies the type of discharge (CWA). | Allowed values can be obtained from WET database. For the list of domain values see DischargePntType in Appendix 1. | String (15) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |

Data Layer Specification – Environmental Water Quality Permit

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |

Data Layer Specification – Environmental Water Quality Permit

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |

Data Layer Specification – Environmental Water Quality Permit

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for EnvWtrQualPermit_A is:

| Table Name | Identifier | Source |
|------------------|-------------|----------------------|
| wq_EnvWtrQualFee | wetPermitID | Program Area Manager |

Business Table Attributes for wq_EnvWtrQualFee

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|---|---|--------------------|
| | wetPermitID | The unique identifier for each EnvWtrQualPermit feature. Used to link back to the EnvWtrQualPermit_A attribute table. | Allowed values can be obtained from WET database. | String (50) |
| | trackingNumber | The invoice number or other tracking number for each EnvWtrQualFee. | Allowed values can be obtained from WET database. | String (20) |

Data Layer Specification – Environmental Water Quality Permit

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------|--------------------------------------|---|--------------------|
| | feeType | Indicates what type of fee it is. | Allowed values can be obtained from WET database. | String (20) |
| | dateDue | Indicates the due date of the fee. | Allowed values can be obtained from WET database. | Date |
| | datePaid | Indicates the date the fee was paid. | Allowed values can be obtained from WET database. | Date |
| | amount | Indicates the amount paid. | Allowed values can be obtained from WET database. | String (20) |
| | paymentMethod | Indicates how the payment was made. | Allowed values can be obtained from WET database. | String (20) |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Data Layer Specification – Environmental Water Quality Permit

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Water Quality, Environmental Water Quality Permit

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: DischargePntType | |
|-------------------------------------|---|
| ATTRIBUTE NAME: dischargePntType | |
| CODED DOMAIN | DEFINITION |
| CWAdirect | The discharge type is CWA-direct. |
| indirect | The discharge type is indirect. |
| landApplication | The discharge type is land application. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| reuseRecycled | The discharge type is reused/recycled. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: DrainageSourceType | |
|---------------------------------------|---|
| ATTRIBUTE NAME: drainageSourceType | |
| CODED DOMAIN | DEFINITION |
| CWAnonPoint | The source is a Clean Water Act non-point source. |
| CWApont | The source is a Clean Water Act point source. |
| domestic | The source is from domestic or municipal wastewater. |
| industrial | The source is from industrial wastewater. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| SDWAgroundwater | The source is a Safe Drinking Water Act groundwater source. |
| SDWAsurfaceWater | The source is a Safe Drinking Water Act surface water source. |
| stormWater | The source is storm water from a storm water collection system. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| treatedRecycled | The source is treated recycled water. |

| DOMAIN TABLE NAME: EnvSystemType | |
|----------------------------------|--|
| ATTRIBUTE NAME: envSystemType | |
| CODED DOMAIN | DEFINITION |
| CNGP | The environmental system is a construction general permit. |
| FOTW | The environmental system is a federally owned treatment works. |
| IWTP | The environmental system is an industrial waste treatment plant. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| OVRS | The environmental system is an overseas system. |
| POTW | The environmental system is a discharge to a publicly owned treatment works. |
| PWS | The environmental system is a public water system. |
| SWTR | The environmental system is a national pollution discharge elimination system. |
| SWTRMS4 | The environmental system is a municipal separate storm sewer system for storm water. |
| SWTRMSGP | The environmental system is a multi-sector general permit for storm water. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

Data Layer Specification – Environmental Water Quality Permit

| DOMAIN TABLE NAME: GrantingAuthority | |
|--------------------------------------|---|
| ATTRIBUTE NAME: grantingAuthority | |
| CODED DOMAIN | DEFINITION |
| EPA | The EPA is the granting authority for the permit. |
| local | The local government is the granting authority for the permit. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| state | The state government is the granting authority for the permit. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: RegulatedType | |
|----------------------------------|---|
| ATTRIBUTE NAME: regulatedType | |
| CODED DOMAIN | DEFINITION |
| drinkingWater | The resource is regulated as drinking water. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| stormWater | The resource is regulated as storm water. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| wastewater | The resource is regulated as wastewater. |

| 1/8/2018 | EnvironmentalWaterQuality SampleLocation_20180108 | <ul style="list-style-type: none"> Updated Allowed Values for dischargeRateUom attribute field. Corrected camel case for usWaters to USwaters in DischPntCategory domain table. |
| 03/01/2018 | EnvironmentalWaterQuality SampleLocation_20180301 | <ul style="list-style-type: none"> Updated the “Definition”, “Positional Accuracy”, “Attributes”, “Business Tables,” and “Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Attribute Domain Tables” sections. |

Data Layer Specification – Environmental Water Quality Sample Location

This Data Layer Specification (DLS) defines geospatial data specifications for the EnvWtrQualSampLoc_P data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

The physical location at which samples are collected for the purpose of supporting water quality.

Sampling locations associated with Clean Water Act permits should be included in this data layer. Sampling locations associated with Safe Drinking Water Act should not be included in this data layer.

Data Layer Details

| | |
|--|---|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | EnvWtrQualSampLoc_P |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalWaterQuality |
| Previous Layer Names: | drinking_water_sample_point groundwater_quality_sta_point groundwater_sample_location_point surface_water_sample_location_point surfacewater_quality_sta_point EnvironmentalSampleLocation |
| Geometry Type: | Point |
| Data Steward Organization (Program Area): | Program Area: Environmental Water Quality |
| Data Steward POC: | AFCEC/CZTQ Air Force Environmental Water Quality Program SME |
| Representation: | <ul style="list-style-type: none">Environmental water quality sample location points are a representation of the coordinate location of that feature. |

Implementing Authorities and Regulations

| | |
|---------------------------------|--|
| Implementing Program(s): | Driver(s): |
| HQ AF/A7CAN | <ul style="list-style-type: none">AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007AFI32-7062, Comprehensive Planning, 27 June 2013AFI32-7064, Integrated Natural Resources Management, 18 November 2014AFI32-7065, Cultural Resources Management, 19 November 2014AFH32-9007, Managing Air Force Real Property, 1 May 1999 |

| Implementing Program(s): | Driver(s): |
|--------------------------|--|
| | <ul style="list-style-type: none"> • AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 • AFI32-7047, Water and Fuel Systems • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 |

Geometry/Topology

| Point Features: |
|--------------------------|
| Points must be disjoint. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on a quarterly (3 month) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the quarterly update. Additionally a quarterly Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Currently, only stormwater and wastewater sampling locations will be included in this layer. Drinking water sample locations will not be included. Attributes specific to drinking water sample locations (indicated in the Attributes section below) should be populated with “NA” or its equivalent. If drinking water sample locations are included in the future these attributes will be populated accordingly.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Data Layer Specification – Environmental Water Quality Sample Location

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the EnvWtrQualSampLoc_P layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the EnvWtrQualSampLoc_P data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|---|--------------------|----------|
| | envWtrQualSampLocIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Allowed values can be obtained from WET database. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Allowed values can be obtained from WET database. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |

Data Layer Specification – Environmental Water Quality Sample Location

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---------------------------|---|---|--------------------|----------|
| | latitude | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | MGRS | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | SDSFIE |
| | elevation | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | wetID | The unique identifier from the WET database for each EnvWtrQualSampLoc feature. | Allowed values can be obtained from WET database. | String (50) | AF |
| | associatedPermit | The unique identifier for each EnvWaterQualPermit associated with the sample location. | Allowed values can be obtained from WET database. | String (50) | AF |
| | easiReportID | The unique identifier for an EASI report. | Allowed values can be obtained from WET database. | Integer (Long) | AF |
| D | sampleLocationType | The type of sampling location. | For a list of domain values, see SampleLocationType in Appendix 1. | String (30) | AF |
| D | isRegulatedDischargePoint | Indicates if the sampling location is also a discharge point. | NA, no, TBD, yes | String (3) | AF |
| D | isSourceWell | Indicates if the sampling location is also a source well. | Specific to drinking water sample locations. Populate with NA. | String (3) | AF |

Data Layer Specification – Environmental Water Quality Sample Location

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------------|--|--|--------------------|----------|
| | wellPercent | The percentage that the well contributes to the water supply. | Specific to drinking water sample locations. Populate with 77777. | Integer (Long) | AF |
| D | hasUICPermit | Indicates if well is regulated under an Underground Injection Control permit. | Specific to drinking water sample locations. Populate with NA. | String (3) | AF |
| D | drainageSourceType | General type of drainage to the feature or source of drinking water. | Allowed values can be obtained from WET database. For a list of domain values, see DrainageSourceType in Appendix 1. | String (20) | AF |
| D | dischargePntType | A description that identifies the type of discharge (CWA). | Allowed values can be obtained from WET database. For a list of domain values, see DischargePntType in Appendix 1. | String (15) | AF |
| D | dischargePntStatus | The status of the discharge point (e.g., permanent, temporary, proposed, abandoned, etc.), from lists or entered from field inspections. | For a list of domain values, see DischPntStatus in Appendix 1. | String (10) | AF |
| D | dischargePntCategory | A field indicating the kind, class, or group of the subject item. | For a list of domain values, see DischPntCategory in Appendix 1. | String (8) | AF |
| | dischargeSourceRate | The estimated discharge/source flow rate at this feature (gpm, gpd, or mgd). | Allowed values can be obtained from WET database. | Double | AF |

Data Layer Specification – Environmental Water Quality Sample Location

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|---|---|--------------------|----------|
| D | dischargeRateUOM | The unit of measure used for discharge/source rate. | Allowed values can be obtained from WET database. For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (45) | AF |
| | receivingWaters | Indicates which federal or state waters receive the discharge. | Allowed values can be obtained from WET database. | String (20) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |

Data Layer Specification – Environmental Water Quality Sample Location

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|---|--------------------|----------|
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |

Data Layer Specification – Environmental Water Quality Sample Location

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |

Data Layer Specification – Environmental Water Quality Sample Location

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for EnvWtrQualSampLoc_P is:

| Table Name | Identifier | Source |
|----------------------|------------|----------------------|
| wq_EnvWtrQualSampLoc | wetID | Program Area Manager |

Business Table Attributes for wq_EnvWtrQualSampLoc

| Domain (D) | Required SDSFIE Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------------|---|---|--------------------|
| | wetID | The unique identifier for each EnvWtrQualSampLoc feature. Used to link back to the EnvWtrQualSampLoc_P attribute table. | Allowed values can be obtained from WET database. | String (50) |
| | EAID | Indicates the enforcement action ID in EASI for more details of the violation. | Allowed values can be obtained from WET database. | String (255) |
| | sampleViolationDate | Date the sample exceedance occurred. | Allowed values can be obtained from WET database. | Date |

Data Layer Specification – Environmental Water Quality Sample Location

| Domain (D) | Required SDSFIE Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------------|--|---|--------------------|
| | sampleViolationTitle | Brief description of the sample exceedance. | Allowed values can be obtained from WET database. | String (255) |
| | overallRootCause | Indicates the overall root cause of the sample exceedance. IST/Installation inputting into EASI should fill in this field. | Allowed values can be obtained from WET database. | String (255) |
| D | isPermitConditionMet | Indicates if the permit condition is met. | NA, no, TBD, yes | String (3) |
| | conditionsNotMet | Lists the conditions that were not met at this sample location and are non-compliant with the permit. | Allowed values can be obtained from WET database. | String (255) |
| | monitoringFrequency | Describes the frequency in which the sample location is monitored. IST/Installation inputting into EASI should fill in this field. | Allowed values can be obtained from WET database. | String (255) |
| | sampleType | Describes the type of sample collected at this location. IST/Installation inputting into EASI should fill in this field. | Allowed values can be obtained from WET database. | String (20) |
| | contaminantType | Describes the type(s) of contaminants being discharged. IST/Installation inputting into EASI should fill in this field. | Allowed values can be obtained from WET database. | String (255) |
| D | isHBV | Indicates if a biological sample at this location is a health-based violation (HBV). Only applies to SDWA. | Specific to drinking water sample locations. Populate with NA. | String (3) |
| | popImpacted | Indicates the population potentially affected (SDWA only). | Specific to drinking water sample locations. Populate with 77777. | Double |
| | notifyTier | Indicates what tier level of public notification is required. | Specific to drinking water sample locations. Populate with NA. | String (5) |

Data Layer Specification – Environmental Water Quality Sample Location

| Domain (D) | Required SDSFIE Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|------------------------|--|---|--------------------|
| | contaminant | The contaminant of concern being discharged at the location. IST/Installation inputting into EASI should complete this field. | Allowed values can be obtained from WET database. | String (100) |
| | concentrationLevel | Indicates the concentration of the contaminant based on analysis. IST/Installation inputting into EASI should complete this field. | | String (255) |
| | contaminantPermitLevel | Indicates the level/limit of the contaminant per the permit for which an action is required. IST/Installation inputting into EASI should fill in this field. | Allowed values can be obtained from WET database. | String (255) |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Data Layer Specification – Environmental Water Quality Sample Location

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Water Quality, Environmental Water Quality Sample Location

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: DischargePntType | |
|-------------------------------------|---|
| ATTRIBUTE NAME: dischargePntType | |
| CODED DOMAIN | DEFINITION |
| CWAdirect | The discharge type is CWA-direct. |
| indirect | The discharge type is indirect. |
| landApplication | The discharge type is land application. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| reuseRecycled | The discharge type is reused/recycled. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: DischPntCategory | |
|--------------------------------------|---|
| ATTRIBUTE NAME: dischargePntCategory | |
| CODED DOMAIN | DEFINITION |
| basin | The discharge point is to a rapid infiltration basin. |
| drain | The discharge point is a drainage field. |
| lagoon | The discharge point is to a lagoon. |
| leach | The discharge point is to a leach field. |
| NA | Not Applicable: No value exists. |
| offSite | The discharge point is off site, off base, or out of system. |
| open | The discharge point is an open discharge. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| overflow | The discharge point is to an overflow structure. |
| percPond | The discharge point is to a percolation pond. |
| surface | The discharge point is an open discharge to the surface. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The discharge point category is unknown. |
| USwaters | The discharge point is to Waters of the US (e.g. estuaries, tributaries, or similar). |
| well | The discharge point is a well. |

| DOMAIN TABLE NAME: DischPntStatus | |
|------------------------------------|---|
| ATTRIBUTE NAME: dischargePntStatus | |
| CODED DOMAIN | DEFINITION |
| abandoned | The discharge point has been abandoned in place (not in use). |
| buried | The discharge point is buried. |
| incomplete | The discharge point is incomplete or unfinished. |
| inService | The discharge point is in service and being used. |
| NA | Not Applicable: No value exists. |
| natural | The discharge point is naturally occurring. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| permanent | The discharge point is permanent. |
| proposed | The discharge point is proposed. |
| retired | The discharge point is permanently retired, or taken out of service. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| temporary | The discharge point is temporary. |
| unknown | The discharge point status is unknown. |

Data Layer Specification – Environmental Water Quality Sample Location

| DOMAIN TABLE NAME: DrainageSourceType | |
|---------------------------------------|---|
| ATTRIBUTE NAME: drainageSourceType | |
| CODED DOMAIN | DEFINITION |
| CWAnonPoint | The source is a Clean Water Act non-point source. |
| CWApont | The source is a Clean Water Act point source. |
| domestic | The source is from domestic or municipal wastewater. |
| industrial | The source is from industrial wastewater. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| SDWAgroundwater | The source is a Safe Drinking Water Act groundwater source. |
| SDWAsurfaceWater | The source is a Safe Drinking Water Act surface water source. |
| stormWater | The source is storm water from a storm water collection system. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| treatedRecycled | The source is treated recycled water. |

| DOMAIN TABLE NAME: SampleLocationType | |
|---------------------------------------|--|
| ATTRIBUTE NAME: sampleLocationType | |
| CODED DOMAIN | DEFINITION |
| constructionStormWaterPoint | This value represents discharge point for storm water from a construction site. |
| distribution | Sample point within the distribution system. |
| domesticSewerDischargePoint | This value represents discharge point from a domestic sewer. |
| domesticSewerEndOfPipePoint | This value represents sample location at an end-of-pipe for domestic sewer. |
| domesticSewerManholePoint | This value represents sample location at a domestic sewer manhole point. |
| drinkingWaterSamplePoint | This value represents sample location for drinking water at the source. |
| drinkingWaterStaPoint | This value represents sample location for drinking water within the distribution system. |
| groundwaterDischargePoint | This value represents discharge point from groundwater source. |
| groundwaterQualityStaPoint | This value represents sample location at a groundwater station. |
| groundwaterSampleLocPoint | This value represents sample location at an other groundwater point. |
| indWastewaterDischargePoint | This value represents discharge point for wastewater from industrial wastewater facility. |
| injectionWellDischargePoint | This value represents discharge point at an injection well. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| plantTreated | Water treatment plant sample point. |
| pollutionReleasePoint | This value represents discharge point from a pollution source at the point it reaches water. |
| pollutionSourcePoint | This value represents discharge point at pollution source. |
| sourceRaw | Water source sample point. |
| stormSewerDischargePoint | This value represents discharge point for storm water from storm sewer. |
| stormSewerEndOfPipePoint | This value represents sample location at an end-of-pipe or outfall for storm sewer. |
| stormSewerManholePoint | This value represents sample location at a storm sewer manhole point. |
| surfaceWaterDischargePoint | This value represents discharge point from surface water. |
| surfaceWaterQualityStaPoint | This value represents sample location at a surface water station. |
| surfaceWaterSampleLocPoint | This value represents sample location at an other surface water point. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| well | Well head sample point. |
| wellWaterDischargePoint | This value represents discharge point from well source. |

Data Layer Specification – Spill Incident Area

This Data Layer Specification (DLS) defines geospatial data specifications for the SpillIncidentArea_A and SpillIncidentArea_P data layers implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

The physical location where a spill has occurred.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | SpillIncidentArea_A SpillIncidentArea_P |

Geometry/Topology

| |
|--|
| Polygon Features: |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |
| Point Features: |
| If a point represents a polygon feature, then the point must fall properly inside of the coinciding polygon. |

There are no feature class specific topology rules for SpillIncidentArea_P.

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on a quarterly (3 month) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the quarterly update. Additionally a quarterly Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase. Only spills meeting the criteria to be input into the EASI database should be included in this feature class.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the SpillIncidentArea_A and SpillIncidentArea_P layers will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the SpillIncidentArea_A and SpillIncidentArea_P data layers.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------------|--|---|--------------------|----------|
| | spillIncidentAreaIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Allowed values can be obtained from SIRIS. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Allowed values can be obtained from SIRIS or any other descriptive information about the Spill Incident Area that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize (Polygon geometry) | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |

Data Layer Specification – Spill Incident Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|-----------------------------------|--------------------|----------|
| D | areaSizeUOM <i>(Polygon geometry)</i> | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize <i>(Polygon geometry)</i> | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM <i>(Polygon geometry)</i> | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude <i>(Polygon geometry)</i> | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude <i>(Polygon geometry)</i> | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid <i>(Polygon geometry)</i> | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | latitude <i>(Point geometry)</i> | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude <i>(Point geometry)</i> | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | MGRS <i>(Point geometry)</i> | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation <i>(Point geometry)</i> | The elevation of the subject item in relation to a datum. | | Double | AF |

Data Layer Specification – Spill Incident Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------------------------|---|---|--------------------|----------|
| D | elevationUOM (Point geometry) | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | easiID | The unique identifier from EASI for each SpillIncidentArea feature. | Allowed values can be obtained from SIRIS. | String (50) | AF |
| | easiReportID | The unique identifier for an EASI report. | Allowed values can be obtained from SIRIS. | Integer (Long) | AF |
| D | surfaceWaterImpact | Indicates whether surface water has been impacted by the release. | NA, no, TBD, yes | String (3) | AF |
| D | groundwaterImpact | Indicates whether groundwater has been impacted by the release. | NA, no, TBD, yes | String (3) | AF |
| | dateRelease | The date the spill is believed/known to have occurred. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | Allowed values can be obtained from SIRIS. | Integer (Long) | AF |
| D | releaseClass | The classification of the extent of the release (EASI). | Allowed values can be obtained from SIRIS. For the list of domain values see Source and ReleaseClass in Appendix 1. | String (10) | AF |
| | waterPollutionSource | The actual or suspected source of the pollutant or equipment type. | Allowed values can be obtained from SIRIS. | String (100) | AF |
| | rootCause | Describes the root cause of the release at the spill location. | Allowed values can be obtained from SIRIS. | String (255) | AF |
| D | isRemediation | Indicates whether or not further action or remediation is necessary. | NA, no, TBD, yes | String (3) | AF |
| | contaminant | The material of concern at the spill location. | Allowed values can be obtained from SIRIS. | String (100) | AF |

Data Layer Specification – Spill Incident Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|---|--------------------|----------|
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |

Data Layer Specification – Spill Incident Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |

Data Layer Specification – Spill Incident Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | Allowed values may be obtained from SIRIS for some spills. | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. The business tables for SpillIncidentArea_A and SpillIncidentArea_P are:

| Table Name | Identifier | Source |
|------------------------|------------|----------------------|
| wq_SpillIncidentArea_A | easiID | Program Area Manager |
| wq_SpillIncidentArea_P | easiID | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Water Quality, Spill Incident Area

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: ReleaseClass | |
|---------------------------------|---|
| ATTRIBUTE NAME: releaseClass | |
| CODED DOMAIN | DEFINITION |
| classI | Class I: Involves an area less than 2 lineal feet in any plane dimension. |
| classII | Class II: Involves area not over 10 lineal feet in any plane dimension, or not over 50 square feet, and not of a continuous nature. |
| classIII | Class III: Involves area over 10 lineal feet in any plane dimension, or over 50 square feet, or of a continuous nature. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

Data Layer Specification –Environmental Constraint

This Data Layer Specification (DLS) defines geospatial data specifications for the EnvConstraint_A, EnvConstraint_L, and EnvConstraint_P data layers implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

Data layer definition: A location where environmental concerns may preclude certain land uses or activities. The appropriate POC should be contacted before activities are undertaken in the area.

These are approximate locations of recorded environmentally constrained sites or areas that may be protected by federal, state, or local law, or simply require further consideration and due diligence prior to being disturbed or otherwise acted upon. Any proposed action that will occur in or could adversely affect the area, will require review and authorization by the appropriate environmental office.

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must be larger than cluster tolerance (.001 meter). |
| Polygons must be single part features. |
| Line Features: |
| Lines must be single part features. |

There are no topology rules for point features.

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

This data layer is an amalgamation of other environmental data layers from multiple Functional Data Sets, some of which may be buffered so as to conceal their exact location. Specific data layers that may serve as sources for this layer include: ArchaeologicalSite_A, ArchaeologicalSite_L, ArchaeologicalSite_P, CemeteryOrBurialSite_A, CemeteryOrBurialSite_P, CulResPotentialArea_A, SacredSite_A, SacredSite_L, SacredSite_P, TraditionalCulRes_A, TraditionalCulRes_L, TraditionalCulRes_P, SolidWasteLandfill_A, CoastalZoneMgtArea_A, EssentialFishHabitat_A, FloodPlainArea_A, HabitatProtectiveZone_A, NatResRestReclProj_A, NatResRestReclProj_P,

Data Layer Specification –Environmental Constraint

SpecialMgtArea_A, SpecialStatusSpecies_A, SpecialStatusSpecies_L, SpecialStatusSpecies_P, SpeciesSpecificHabitat_A, SpeciesSpecificHabitat_L, SpeciesSpecificHabitat_P, Wetland_A, Wetland_L, Wetland_P, EnvOperableUnit_A, EnvRestorationSite_A, LandUseControl_A, PotentialEnvSite_A, RestTreatmentSystem_A, RestTreatmentSysComp_L, RestTreatmentSysComp_P, and StorageTank_P.

Data from the following layers shall be categorized as “red” in the constraint category attribute field indicating a potentially major constraint: ArchaeologicalSite_A, ArchaeologicalSite_L, ArchaeologicalSite_P, CemeteryOrBurialSite_A, CemeteryOrBurialSite_P, CulResPotentialArea_A, SacredSite_A, SacredSite_L, SacredSite_P, TraditionalCulRes_A, TraditionalCulRes_L, TraditionalCulRes_P, SolidWasteLandfill_A, FloodPlainArea_A, HabitatProtectiveZone_A, NatResRestReclProj_A, NatResRestReclProj_P, SpecialStatusSpecies_A, SpecialStatusSpecies_L, SpecialStatusSpecies_P, Wetland_A, Wetland_L, Wetland_P, EnvOperableUnit_A, EnvRestorationSite_A, LandUseControl_A, PotentialEnvSite_A, RestTreatmentSystem_A, RestTreatmentSysComp_L, RestTreatmentSysComp_P, and StorageTank_P. Data from the following layers shall be categorized as “yellow” in the constraint category attribute field indicating a minor constraint: CoastalZoneMgt_A, EssentialFishHabitat_A, SpecialMgtArea_A, SpeciesSpecificHabitat_A, SpeciesSpecificHabitat_L, and SpeciesSpecificHabitat_P.

Sensitive data from the ArchaeologicalSite_A, ArchaeologicalSite_L, ArchaeologicalSite_P, CemeteryOrBurialSite_A, CemeteryOrBurialSite_P, SacredSite_A, SacredSite_L, SacredSite_P, TraditionalCulRes_A, TraditionalCulRes_L, and TraditionalCulRes_P layers shall be buffered in such a manner so as to conceal the exact location of specific features. Data from FloodPlainArea_A shall only include flood zones with a 1% annual flood hazard chance (i.e. 100 year flood plain) or greater. Data from the SpeciesSpecificHabitat_A, SpeciesSpecificHabitat_L, and SpeciesSpecificHabitat_P layers shall only include designated critical habitat. Data from the EnvOperableUnit_A, EnvRestorationSite_A, PotentialEnvSite_A, RestTreatmentSystem_A, RestTreatmentSysComp_L, and RestTreatmentSysComp_P layers shall only include features that do not have existing land use controls and would thus be included in the LandUseControl_A data layer (i.e. duplicate data should be avoided). Data from StorageTank_P shall only include underground tanks.

Sensitive Cultural Resources data shall be buffered to conceal the exact location of specific features using a series of geoprocessing methods. Point data shall be buffered in such a manner so that the original site location will be randomly located within an approximately one acre square polygon. Line data shall be buffered by six meters. The resulting irregular polygon will then be “enveloped” inside a minimum bounding polygon. In this manner the true location and shape of the site will be concealed. For polygon data greater than one acre in size, the original polygon will be buffered by six meters and then “enveloped” inside of a rectangular minimum bounding polygon. For polygon data one acre in size or smaller, the original polygon will be buffered in such a manner so that the polygon will be randomly located inside a rectangle approximately four times larger than the original polygon. In this manner the true location and shape of each site will be concealed.

Positional Accuracy

Horizontal Accuracy: Since the intent of this layer is, in part, to conceal the true locations of sensitive environmental sites, a horizontal positional accuracy threshold is not applicable.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west-most spatial extents of the EnvConstraint_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the EnvConstraint_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-------------------|--|----------------|--------------------|----------|
| | envConstraintIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |

Data Layer Specification –Environmental Constraint

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--|---|--|--------------------|----------|
| | sdsFeatureName | The common name of the feature. | Names shall include the installation name, be unique across all geometry types for an installation, and will not be descriptive or provide specific details about the site, e.g. Dover AFB Site 1. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | “Potential environmental constraint site. Prior to performing operations within or disturbing contact Environmental Flight for further guidance.” | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize (Polygon geometry) | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM (Polygon geometry) | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize (Polygon geometry) | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM (Polygon geometry) | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude (Polygon geometry) | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude (Polygon geometry) | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |

Data Layer Specification –Environmental Constraint

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--|--|-----------------------------------|--------------------|----------|
| | MGRScentroid (<i>Polygon Feature</i>) | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | lengthSize (<i>Line geometry</i>) | The value of the measured length. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | lengthSizeUOM (<i>Line geometry</i>) | The unit of measure for the calculated length. | foot | String (25) | AF |
| | latitudeFrom (<i>Line geometry</i>) | The latitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | latitudeTo (<i>Line geometry</i>) | The latitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeFrom (<i>Line geometry</i>) | The longitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeTo (<i>Line geometry</i>) | The longitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |

Data Layer Specification –Environmental Constraint

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|---|---|--------------------|----------|
| | elevationFrom (<i>Line geometry</i>) | The elevation component of the beginning (upstream/upgradient) coordinate point in feet. | | Double | AF |
| | elevationTo (<i>Line geometry</i>) | The elevation component of the ending (downstream/downgradient) coordinate point in feet. | | Double | AF |
| D | elevationUOM (<i>Line geometry</i>) | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | latitude (<i>Point geometry</i>) | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude (<i>Point geometry</i>) | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | MGRS (<i>Point Feature</i>) | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation (<i>Point geometry</i>) | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM (<i>Point geometry</i>) | The unit of measure for elevation dimension. | foot | String (25) | AF |
| D | constraintCategory | The category of the environmental constraint. | For a list of domain values, see ConstraintCategory in Appendix 1. | String (10) | AF |
| D | hasLandUseConstraint | Indicates whether the area is subject to land use constraints. | NA, no, TBD, yes | String (3) | AF |

Data Layer Specification –Environmental Constraint

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | hasLandPlanConstraint | Indicates whether the area is subject to land planning constraints. | NA, no, TBD, yes | String (3) | AF |
| | poc | The point of contact for the feature. | “Air Force Environmental Flight” | String (50) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |

Data Layer Specification –Environmental Constraint

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |

Data Layer Specification –Environmental Constraint

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|------------------------|----------------|--------------------|----------|
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. All geometry types for the data layer will relate back to a single business table. The business table for EnvConstraint_A, EnvConstraint_L, and EnvConstraint_P is:

| Table Name | Identifier | Source |
|------------------|-------------------|----------------------|
| ec_EnvConstraint | envConstraintIDFK | Program Area Manager |

Business Table Attributes for ec_EnvConstraint

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|-------------------|--|---|--------------------|
| | envConstraintIDFK | The unique identifier for each EnvConstraint feature. Used to link back to the appropriate feature class. | | String (20) |
| | featureName | The name of the feature given in the sdsFeatureName attribute field of the feature class. | This should be the same name as given in the sdsFeatureName attribute field of the related feature class. | String (80) |
| | constraintReason | A narrative describing the reason for the constraint. | | String (255) |
| | sourceDataLayer | The environmental data layer(s) containing the source data the constraint is based on. | | String (255) |
| | programAreaPOC | The point of contact for the program area that owns the specific feature requiring the environmental constraint. | | String (50) |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the Environmental office.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

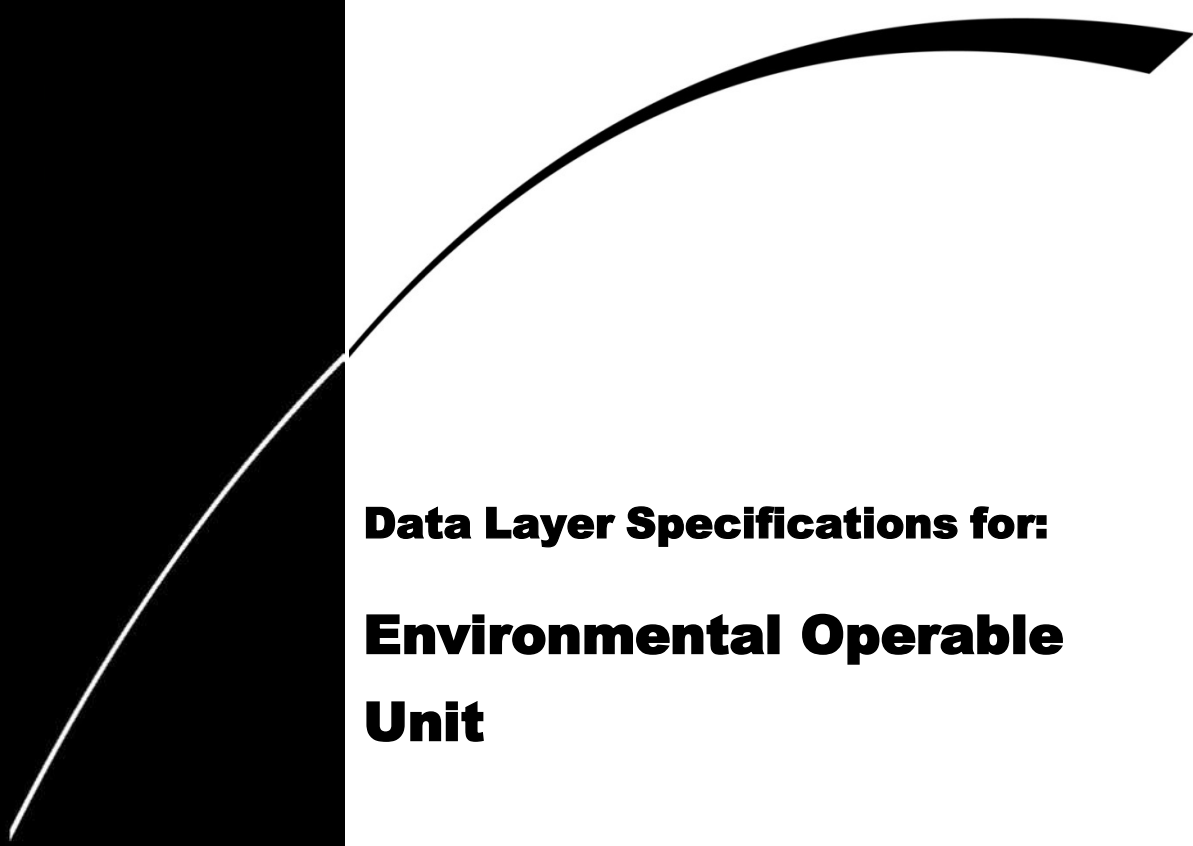

Theme Keywords: Environmental Constraints, Environmental Constraint

Data Layer Specification – Environmental Operable Unit

This Data Layer Specification (DLS) defines geospatial data specifications for the EnvOperableUnit_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

A discrete action that comprises an incremental step toward comprehensively addressing site problems. This discrete portion of a remedial response manages migration, or eliminates or mitigates a release, threat of release, or pathway of exposure.

Data Layer Details

| | |
|--|---|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | EnvOperableUnit_A |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must not overlap. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **6 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west-most spatial extents of the EnvOperableUnit_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters.

Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the EnvOperableUnit_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|--|--------------------|----------|
| | envOperableUnitIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | The local name for the Operable Unit. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Operable Unit that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |

Data Layer Specification – Environmental Operable Unit

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-------------------|--|---|--------------------|----------|
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | operableUnit | The operable unit identification. | | String (10) | AF |
| | officialOUname | The official name for the operable unit. | | String (100) | AF |
| | associatedSite | Identifies the associated environmental restoration site(s). | | String (255) | AF |
| D | unitType | Identifies whether the consolidated management area is an Operable Unit under CERCLA or a Groundwater Management Unit under RCRA. | For a list of domain values, see UnitType in Appendix 1. | String (10) | AF |
| D | isTechImpractArea | Indicates whether the area is a Technical Impracticability Area. | NA, no, TBD, yes | String (3) | AF |

Data Layer Specification – Environmental Operable Unit

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | isContainZone | Indicates whether the area is a Containment Zone. | NA, no, TBD, yes | String (3) | AF |
| | programManager | The Environmental Restoration point of contact responsible for the feature. | | String (100) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| | MajorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |

Data Layer Specification – Environmental Operable Unit

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |

Data Layer Specification – Environmental Operable Unit

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPEs geolocator code. | | String (4) | AF |

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|-----------------------|----------------|--------------------|----------|
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for EnvOperableUnit_A is:

| Table Name | Identifier | Source |
|--------------------|---------------------|----------------------|
| er_EnvOperableUnit | envOperableUnitIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Data Layer Specification – Environmental Restoration Sample Location

This Data Layer Specification (DLS) defines geospatial data specifications for the EnvRestorSampLoc_P data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

The physical location at which samples are collected for the purpose of supporting environmental restoration or compliance. This should include all wells, boreholes, piezometers, soil vapor points, air vapor sampling points, etc.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | EnvRestorSampLoc_P |

Geometry/Topology

| Point Features: |
|--------------------------|
| Points must be disjoint. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **50 centimeters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Data Layer Specification – Environmental Restoration Sample Location

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the EnvRestorSampLoc_P layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the EnvRestorSampLoc_P data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|---|--------------------|----------|
| | envRestorationSampleIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | The local name for the Restoration Sample Location. | String (80) | SDSFIE |

Data Layer Specification – Environmental Restoration Sample Location

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|---|--|--------------------|----------|
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Restoration Sample Location that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | latitude | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | MGRS | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | sampleLocationID | The unique identifier in the ERPIMS database for each sample location. Used to link attribute table to LOCID field in the LDI table of the ERPIMS database. | Allowed values can be obtained from ERPIMS. | String (50) | AF |
| | eesoemisSiteID | The ID for the restoration site(s) taken from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (80) | AF |
| | associatedOU | Identifies the associated operable unit. | | String (100) | AF |

Data Layer Specification – Environmental Restoration Sample Location

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------|--|---|--------------------|----------|
| | commonSiteName | The locally assigned common name for the restoration site that contains the sample location. | | String (100) | AF |
| D | sampleType | Represents the type of sample being performed. | For a list of domain values, see SampleType in Appendix 1. | String (30) | AF |
| | sampleDate | Date last sample was collected. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| D | sampleFreq | The frequency at which the location is sampled. | For a list of domain values, see MonitoringFreq in Appendix 1. | String (20) | AF |
| D | sampleStatus | Identifies the status of the environmental restoration sample site. | For a list of domain values, see SampleStatus in Appendix 1. | String (10) | AF |
| | sampleDepth | The depth, in feet, at which the sample was taken. | | Double | AF |
| D | sampleDepthUOM | The unit of measure for the sample depth. | foot | String (25) | AF |
| D | restWellType | The type of environmental restoration well, either soil vapor well or groundwater well. | For a list of domain values, see RestWellType in Appendix 1. | String (15) | AF |
| D | grndwtrMonWellZone | Identifies the groundwater monitoring well depth zone. | For a list of domain values, see GMMWzone in Appendix 1. | String (15) | AF |
| | dateInstalled | Indicates the date on which the feature was/is to be installed. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |

Data Layer Specification – Environmental Restoration Sample Location

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------|--|------------------|--------------------|----------|
| | totalDepth | The Z-value representing the total depth of the well, piezometer, or borehole in feet. | | Double | AF |
| D | totalDepthUOM | The unit of measure used for the total depth. | foot | String (25) | AF |
| | depthToGrndwtr | The Z-value representing the depth to groundwater value, in feet, for each sampling location. | | Double | AF |
| D | depthToGrndwtrUOM | The unit of measure used to measure depth to groundwater. | foot | String (25) | AF |
| | depthToBedrock | The Z-value representing the depth to bedrock value, in feet, for each sampling location. | | Double | AF |
| D | depthToBedrockUOM | The unit of measure used to measure depth to bedrock. | foot | String (25) | AF |
| D | isTreatmentSystem | Indicates whether a sampling location (e.g. well) is part of a treatment system. | NA, no, TBD, yes | String (3) | AF |
| | drillingParameters | Drilling parameters associated with the well. Derived from ERPIMS. | | String (255) | AF |
| | drillDateStart | Date drilling began at the location. Derived from ERPIMS. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| | drillDateEnd | Date drilling ended at the location. Derived from ERPIMS. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |

Data Layer Specification – Environmental Restoration Sample Location

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|---|--|--------------------|----------|
| | holeDiam | The diameter for the hole in inches. | | Double | AF |
| D | holeDiamUOM | The unit of measure for the diameter. | inch | String (25) | AF |
| | casingMaterial | The material used for the well casing. | | String (50) | AF |
| | casingDiam | The diameter for the casing in inches. | | Double | AF |
| D | casingDiamUOM | The unit of measure for the diameter. | inch | String (25) | AF |
| | casingTopElev | The top elevation of the casing in feet. | | Double | AF |
| D | casingElevUOM | The unit of measure for the top elevation. | foot | String (25) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |

Data Layer Specification – Environmental Restoration Sample Location

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |

Data Layer Specification – Environmental Restoration Sample Location

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |

Data Layer Specification – Environmental Restoration Sample Location

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPEs geolocator code. | | String (4) | AF |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for EnvRestorSampLoc_P is:

| Table Name | Identifier | Source |
|---------------------|--------------------------|----------------------|
| er_EnvRestorSampLoc | envRestorationSampleIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

Data Layer Specification – Environmental Restoration Sample Location

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Environmental Restoration, Environmental Restoration Sample Location

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: GWMWzone | |
|------------------------------------|---|
| ATTRIBUTE NAME: grndwtrMonWellZone | |
| CODED DOMAIN | DEFINITION |
| deep | The groundwater monitoring well is deep. |
| intermediate | The groundwater monitoring well is intermediate. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| shallow | The groundwater monitoring well is shallow. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: MonitoringFreq | |
|-----------------------------------|---|
| ATTRIBUTE NAME: sampleFreq | |
| CODED DOMAIN | DEFINITION |
| annually | Monitoring occurs annually. |
| biAnnually | Monitoring occurs bi-annually. |
| biMonthly | Monitoring occurs bi-monthly. |
| daily | Monitoring occurs daily. |
| fiveYears | Monitoring occurs every five years. |
| monthly | Monitoring occurs monthly. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be describe in the sdsFeatureDescription attribute. |
| quarterly | Monitoring occurs quarterly. |
| schedNotDefined | The monitoring schedule is not defined. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| twoMonths | Monitoring occurs every two months. |
| twoYears | Monitoring occurs every two years. |
| weekly | Monitoring occurs weekly. |

| DOMAIN TABLE NAME: RestWellType | |
|---------------------------------|---|
| ATTRIBUTE NAME: restWellType | |
| CODED DOMAIN | DEFINITION |
| groundwaterWell | The well is a groundwater well. |
| NA | Not Applicable: No value exists. |
| soilVaporWell | The well is a soil vapor well. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: SampleStatus | |
|---------------------------------|-----------------------------------|
| ATTRIBUTE NAME: sampleStatus | |
| CODED DOMAIN | DEFINITION |
| abandoned | The sample location is abandoned. |
| active | The sample location is active. |
| destroyed | The sample location is destroyed. |
| inactive | The sample location is inactive. |
| NA | Not Applicable: No value exists. |

Data Layer Specification – Environmental Restoration Sample Location

| DOMAIN TABLE NAME: SampleStatus | |
|---------------------------------|---|
| ATTRIBUTE NAME: sampleStatus | |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: SampleType | |
|-------------------------------|--|
| ATTRIBUTE NAME: sampleType | |
| CODED DOMAIN | DEFINITION |
| airSampleIndoor | The sample was derived from an air sample (Indoor). |
| airSampleOutdoor | The sample was derived from an air sample (Outdoor). |
| compliance | Compliance. |
| drinkingWater | The sample was derived from a drinking water point (tap sample). |
| drinkingWaterWell | The sample was derived from a drinking water well. |
| extractionGWWell | The sample was derived from a groundwater sample from extraction well. |
| gasEffluent | The sample was derived from a gas effluent sample (Composite Vapor After Treatment). |
| gasGMMW | The sample was derived from a gas sample in a GMMW. |
| gasInfluent | The sample was derived from a gas influent sample (Composite Vapor Before Treatment). |
| gasPiezometer | The sample was derived from a gas from a piezometer well. |
| gasSoilExtractionWell | The sample was derived from gas soil extraction well. |
| gasSoilMonitoringWell | The sample was derived from gas soil monitoring well. |
| GroundwaterMonitoringWell | The sample was derived from a groundwater monitoring well (GW MW). |
| GWDirectPush | The sample was derived from direct push groundwater sample (Hydropunch). |
| GWExtractedEffluent | The sample was derived from a extracted groundwater effluent sample (Composite GW After Treatment). |
| GWExtractedInfluent | The sample was derived from a extracted groundwater influent sample (Composite GW Before Treatment). |
| GWHydropunch | The sample was derived from groundwater grab from hydropunching. |
| GWPiezometer | The sample was derived from a piezometer to collect groundwater sample. |
| holdingPond | The sample was derived from a holding pond sample. |
| holdingTank | The sample was derived from a holding tank sample. |
| indicator | Indicator. |
| injectionWell | The sample was derived from a water sample from an injection well. |
| landfillGasMonitoringPoint | The sample was derived from landfill gas monitoring point. |
| landfillGasWellPoint | The sample was derived from landfill gas well. |
| landfillLeachatePoint | The sample was derived from landfill leachate point (Seep, Sump, or Pipe). |
| monitoring | Monitoring. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| sediment | The sample was derived from a sediment sample. |
| seepSample | The sample was derived from a seep sample. |
| soilBoreInterval | The sample was derived from a soil grab sample from a boring interval. |
| soilCompositeSample | The sample was derived from a composite soil sample. |
| soilDirectPush | The sample was derived from direct push soil sample point. |
| soilGas | The sample was derived from soil gas grab sample from subsurface. |
| soilGrab | The sample was derived from a soil grab sample (Borehole). |
| soilHandAuger | The sample was derived from a soil hand auger. |
| soilSurface | The sample was derived from a surface soil by grab sample. |
| springSample | The sample was derived from a spring sample. |
| stormWater | The sample was derived from a storm water sample. |
| subslabPort | The sample was derived from gas obtained from a subslab port in a building. |
| surfaceWater | The sample was derived from a surface water sample. |

Data Layer Specification – Environmental Restoration Sample Location

| DOMAIN TABLE NAME: SampleType | |
|-------------------------------|---|
| ATTRIBUTE NAME: sampleType | |
| swabWipe | The sample was derived from a swab/wipe. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| tempGWMW | The sample was derived from a groundwater monitoring well (Temporary). |
| visual | Visual. |
| wasteWater | The sample was derived from a wastewater sample. |

Environmental GIS Program**

Revision History

| Date: | Version: | Description of Revision: |
|------------|--|---|
| 12/12/2016 | Environmental RemediationSite_20161212 | <ul style="list-style-type: none"> Removed “the vertical datum shall be Mean Sea Level (MSL_Height),” from the Coordinate System section. |
| 6/23/2016 | Environmental RemediationSite_20160623 | <ul style="list-style-type: none"> Updated EnvRemediationSite_A representation under “Data Layer Details” section. Updated EnvRemediationSite_A topology under “Geometry/Topology” section. Added authoritative source language to the “Allowed Values” column under “Attributes” section. Updated “Positional Accuracy” section. |
| 3/9/2017 | Environmental RemediationSite_20170310 | <ul style="list-style-type: none"> Updated all Air Force Standard attribute fields to match August 6, 2015 GeoBase Data Dictionary. Updated “Positional Accuracy” section. Updated “For Empty Text Values” subsection. |
| 6/8/2017 | Environmental RemediationSite_20170608 | <ul style="list-style-type: none"> Updated the data layer update frequency in the “Sources and Source Selection” section. Updated “Data Steward POC” |
| 3/1/2018 | Environmental RemediationSite_20180301 | <ul style="list-style-type: none"> Updated Definition, Data Layer Details, Geometry/Topology, Positional Accuracy, Attributes, and Business Tables sections. Updated domain tables in Appendix 1. |

Data Layer Specification – Environmental Remediation Site

This Data Layer Specification (DLS) defines geospatial data specifications for the EnvRestorationSite_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

The area where a Defense Environmental Restoration Program or Compliance-Related Cleanup study or project is planned, underway, or has reached Response Complete.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | EnvRestorationSite_A |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalRestoration |
| Previous Layer Names: | environmental_restoration_area superfund_area EnvironmentalRemediationSite |
| Geometry Type: | Polygon |
| Data Steward Organization (Program Area): | Program Area: Environmental Restoration |
| Data Steward POC: | AFCEC/CZTE Air Force Environmental Restoration Program SME |
| Representation: | <ul style="list-style-type: none">• Restoration sites are represented as closed polygons depicting the outermost extent of the site.• Each individual restoration site is represented by a single area feature. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|---------------------------------|---|
| HQ AF/A7CAN | <ul style="list-style-type: none">• AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007• AFI32-7062, Base Comprehensive Planning, 13 November 2009• AFI32-7064, Integrated Natural Resources Management, 18 November 2014• AFI32-7065, Managing Cultural Resources Management Program, 19 November 2014• AFH32-9007, Managing Air Force Real Property, 1 May 1999• AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996• Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 |

| Implementing Program(s): | Driver(s): |
|--------------------------|---|
| | <ul style="list-style-type: none"> • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 • AFI32-7020, The Environmental Restoration Program, 7 November 2014 • Compensation, and Liability Act (CERCLA) • Title 42 USC (42 USC) Sections 9601 - 9675 |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **6 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the EnvRestorationSite_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the EnvRestorationSite_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------------|--|---|--------------------|----------|
| | envRestorationSiteIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | SDSFIE |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | The local name for the Restoration Site. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Restoration Site that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |

Data Layer Specification – Environmental Remediation Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|--|--------------------|----------|
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | erpimsSiteID | The ID for the feature taken from ERPIMS. | | Integer (Long) | AF |
| | eeshmisSiteID | The ID for the restoration site(s) taken from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (80) | AF |
| | officialSiteName | The full official site name for the environmental restoration site (e.g. DP001-D-1). | | String (100) | AF |
| | parentSiteName | The name for the site without the subsite designator (e.g. DP001). | | String (50) | AF |
| | subsiteName | The subsite designator for the site (e.g. D-1). | | String (50) | AF |
| | associatedOU | Identifies the associated operable unit. | | String (100) | AF |

Data Layer Specification – Environmental Remediation Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------------|---|--|--------------------|----------|
| D | restProgramType | The environmental restoration program responsible for the site, IRP or MMRP. | For a list of domain values, see RestProgramType in Appendix 1. | String (5) | AF |
| | techImpractContainZone | The Technical Impracticability/Containment Zone in which the restoration site is located. | | String (150) | AF |
| D | restSourceType | Identifies the source for the restoration site. | For a list of domain values, see RestSourceType in Appendix 1. | String (3) | AF |
| | decisionalDocDesc | Identifies the decisional document and date for the restoration site. | | String (255) | AF |
| | soilROD | The Record of Decision that addresses soils for the restoration site. | | String (255) | AF |
| | soilStatus | The status of the soils in the Record of Decision. | | String (100) | AF |
| | soilStatusDate | The date of the Record of Decision that establishes the status of the soils at the restoration site. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| | historicSoilStatus | The status of the soils in the NFA/NFI. | | String (100) | AF |
| | grndwtrROD | The Record of Decision that addresses groundwater for the restoration site. | | String (255) | AF |
| | grndwtrStatus | The status of the groundwater in the Record of Decision. | | String (100) | AF |

Data Layer Specification – Environmental Remediation Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|---|--|--------------------|----------|
| | grndwtrStatusDate | The date of the Record of Decision that establishes the status of the groundwater at the restoration site. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| | historicGrndwtrStatus | The status of the groundwater in the NFA/NFI. | | String (100) | AF |
| D | sitePhaseStatus | Identifies the current phase status of the environmental restoration site. | For a list of domain values, see PhaseStatus in Appendix 1. | String (6) | AF |
| D | isNPLsite | Indicates whether the site is on the National Priorities List. | NA, no, TBD, yes | String (3) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |

Data Layer Specification – Environmental Remediation Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |

Data Layer Specification – Environmental Remediation Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |

Data Layer Specification – Environmental Remediation Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for EnvRestorationSite_A is:

| Table Name | Identifier | Source |
|-----------------------|------------------------|----------------------|
| er_EnvRestorationSite | envRestorationSiteIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

Data Layer Specification – Environmental Remediation Site

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Environmental Restoration, Environmental Restoration Site

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: PhaseStatus | |
|---------------------------------|---|
| ATTRIBUTE NAME: sitePhaseStatus | |
| CODED DOMAIN | DEFINITION |
| FS | The current phase status of the remediation site is feasibility study. |
| IRAC | The current phase status of the remediation site is interim remedial action construction. |
| IRAD | The current phase status of the remediation site is interim remedial action design. |
| IRAO | The current phase status of the remediation site is interim remedial action operation. |
| LTM | The current phase status of the remediation site is long term maintenance. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| PA | The current phase status of the remediation site is preliminary assessment. |
| RAC | The current phase status of the remediation site is remedial action construction. |
| RAD | The current phase status of the remediation site is remedial action design. |
| RAO | The current phase status of the remediation site is remedial action operation. |
| RI | The current phase status of the remediation site is remedial investigation. |
| ROD | The current phase status of the remediation site is record of decision. |
| SI | The current phase status of the remediation site is site inspection. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: RestProgramType | |
|------------------------------------|---|
| ATTRIBUTE NAME: restProgramType | |
| CODED DOMAIN | DEFINITION |
| IRP | The site is part of the Installation Restoration Program. |
| MMRP | The site is part of the Military Munitions Response Program. |
| NA | Not Applicable: No value exists. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: RestSourceType | |
|-----------------------------------|------------------------------------|
| ATTRIBUTE NAME: restSourceType | |
| CODED DOMAIN | DEFINITION |
| AL | Air-To-Land |
| AT | Fire/Crash Training Area |
| AW | Air-To-Water |
| BA | Burn Area |
| BG | Background |
| BS | Burial Site |
| BW | Biological Warfare |
| CB | Contaminated Buildings |
| CD | Contaminated Soil Piles |
| CF | Contaminated Fill |
| CG | Contaminated Groundwater |
| CS | Contaminated Sediments |
| CW | Chemical Warfare |
| DA | Discharge Area Or Surface Drainage |

Data Layer Specification – Environmental Remediation Site

| DOMAIN TABLE NAME: RestSourceType | |
|-----------------------------------|---|
| ATTRIBUTE NAME: restSourceType | |
| DB | Building Demolition/Debris Removal |
| DC | Chemical Disposal |
| DD | Drainage Ditch |
| DP | Disposal Pit/Dry Well |
| DS | Drum Storage Area (waste or new product) |
| DT | Dip Tank |
| DU | Depleted Uranium |
| EP | Sewage Effluent Settling Ponds |
| FL | Leach Field |
| FR | Firing Range |
| FT | Fire Training Area |
| HS | Historical Data Not Available |
| ID | Industrial Discharge |
| IN | Incinerator |
| IW | Industrial Waste Treatment |
| LF | Landfill |
| LU | Leaking Underground Storage Tanks/Pipes |
| MR | Munitions Response |
| MS | Munitions Storage Area |
| MU | Munition Disposal |
| MY | Maintenance Yard |
| NA | Not Applicable: No value exists. |
| OS | Optical Shop |
| OT | The value is not given in the domain table. Provide specifics in the sdsFeatureDescription attribute field. |
| OW | Oil Water Separator |
| PL | Petroleum/Lubricants (POL) Lines |
| PP | Propellant and Pyrotechnics |
| PR | Pistol Range |
| PS | Pesticide Shop |
| RR | Range Residue/Expended Munitions |
| RS | Surface Runoff |
| RW | Radioactive Waste Area |
| SA | Storage Area |
| SD | Surface Disposal Area |
| SI | Surface Impoundment/Lagoon |
| SM | Storm Drain |
| SO | Soil Contamination After Tank Removed |
| SP | Plating Shop |
| SR | Small Arms Range |
| SS | Spill Site Area |
| ST | Sewage Treatment Plant |
| TA | Above Ground Storage Tank |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| TG | Target Area |
| TM | Training and Maneuver Area |
| TS | Trap and Skeet Range |
| TT | Underground Tank Farm |
| TU | Soil/Groundwater Treatability Unit |
| US | Underground Storage Tank |
| WL | Waste Lines |
| WM | Mixed Waste Area |
| WP | Waste Disposal Lagoon/Pit |

Data Layer Specification – Environmental Remediation Site

| DOMAIN TABLE NAME: RestSourceType | |
|-----------------------------------|------------------------------------|
| ATTRIBUTE NAME: restSourceType | |
| WR | Washrack |
| WT | Waste Treatment Plant |

Data Layer Specification – Land Use Control

This Data Layer Specification (DLS) defines geospatial data specifications for the LandUseControl_A data layers implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

Locations where land use is restricted due to environmental restoration or compliance purposes.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | LandUseControl_A |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalRestoration |
| Previous Layer Names: | brownfield_area |
| Geometry Type: | Polygon |
| Data Steward Organization (Program Area): | Program Area: Environmental Restoration |
| Data Steward POC: | AFCEC/CZTE Air Force Environmental Restoration Program SME |
| Representation: | <ul style="list-style-type: none"> • Land use control areas are represented as closed polygons depicting the outermost extent of the area. • Each individual land use control area site is represented by a single area feature. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): List the drivers for the feature class |
|---------------------------------|--|
| HQ AF/A7CAN | <ul style="list-style-type: none"> • AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007 • AFI32-7062, Base Comprehensive Planning, 13 November 2009 • AFI32-7064, Integrated Natural Resources Management, 18 November 2014 • AFI32-7065, Managing Cultural Resources Management Program, 19 November 2014 • AFH32-9007, Managing Air Force Real Property, 1 May 1999 • AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 |

| Implementing Program(s): | Driver(s): List the drivers for the feature class |
|--------------------------|--|
| | <ul style="list-style-type: none"> • RPIM 3.0, extracted 4/2009 • AFI32-7020, The Environmental Restoration Program, 7 November 2014 |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **6 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the LandUseControl_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The

Data Layer Specification – Land Use Control

horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the LandUseControl_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|---|--------------------|----------|
| | landUseControlIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | The local name for the Land Use Control area. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Land Use Control that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |

Data Layer Specification – Land Use Control

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|--|--------------------|----------|
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | eesohmisSiteID | The ID for the restoration site(s) taken from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (80) | AF |
| | associatedOU | Identifies the associated operable unit. | | String (100) | AF |
| | LUCstartDate | Date the restriction took effect. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| | modificationDate | Date the restriction was last modified. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). If not applicable, use 99999999. | | Integer (Long) | AF |

Data Layer Specification – Land Use Control

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|---|---|--------------------|----------|
| | terminationDate | Date the restriction terminated. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). If not applicable, use 99999999. | | Integer (Long) | AF |
| | LUCduration | A narrative description of the duration of the LUC. | | String (255) | AF |
| | LUCdecisionalDoc | Identifies the decisional document (e.g., Record of Decision, Remedial Action, etc.) for the LUC at the site ID. | | String (255) | AF |
| | LUCdisclaimer | Any disclaimers associated with the LUC. | | String (255) | AF |
| | LUCtype | The general type(s) of LUC applied to the site, such as "groundwater related", "soil related", or "soil and subsurface debris related." | | String (255) | AF |
| D | LUCstatus | Identifies the status of the LUC Site. | For a list of domain values, see LUCstatus in Appendix 1. | String (10) | AF |
| D | LUCmonitor | Identifies the monitoring frequency associated with the LUC. | For a list of domain values, see MonitoringFreq in Appendix 1. | String (20) | AF |
| D | LUCaccess | Identifies the level of access to a site in accordance with the LUC(s) at the site. | For a list of domain values, see LUCaccess in Appendix 1. | String (20) | AF |
| D | isEnvCovenants | Indicates whether there are LUC type environmental covenants. | NA, no, TBD, yes | String (3) | AF |
| D | isEasements | Indicates whether there are LUC type easements. | NA, no, TBD, yes | String (3) | AF |

Data Layer Specification – Land Use Control

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------------|--|------------------|--------------------|----------|
| D | isDigPermits | Indicates whether there are LUC type dig permits. | NA, no, TBD, yes | String (3) | AF |
| D | isDeedRestrict | Indicates whether there are LUC type deed restrictions. | NA, no, TBD, yes | String (3) | AF |
| D | isDeedNotices | Indicates whether there are LUC type deed notices. | NA, no, TBD, yes | String (3) | AF |
| D | isFences | Indicates whether there are LUC type fences. | NA, no, TBD, yes | String (3) | AF |
| D | isGuards | Indicates whether there are LUC type guards. | NA, no, TBD, yes | String (3) | AF |
| D | isLocUseOrdinance | Indicates whether there are LUC type local use ordinances. | NA, no, TBD, yes | String (3) | AF |
| D | isMasterPlanNotation | Indicates whether there are LUC type notations in master plan. | NA, no, TBD, yes | String (3) | AF |
| D | isSigns | Indicates whether there are LUC type signs. | NA, no, TBD, yes | String (3) | AF |
| D | isZoning | Indicates whether there is LUC type zoning. | NA, no, TBD, yes | String (3) | AF |
| D | isResidentialUse | Indicates whether residential use is prohibited. | NA, no, TBD, yes | String (3) | AF |
| D | isSensitiveUse | Indicates whether activities are prohibited due to sensitive use (e.g. hospital, daycare, school). | NA, no, TBD, yes | String (3) | AF |
| D | isHumanGrndwtrConsum | Indicates whether human consumption of groundwater is prohibited. | NA, no, TBD, yes | String (3) | AF |

Data Layer Specification – Land Use Control

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|---|--|--------------------|----------|
| D | isDrinkingWtrWellInst | Indicates whether installation of drinking water well is prohibited. | NA, no, TBD, yes | String (3) | AF |
| D | isAgriGrndwtrUse | Indicates whether agricultural/irrigation/livestock use of groundwater is prohibited. | NA, no, TBD, yes | String (3) | AF |
| D | isSurfaceWtrExp | Indicates whether exposure to surface water is prohibited. | NA, no, TBD, yes | String (3) | AF |
| D | isSoilExposure | Indicates whether exposure to soils is prohibited. | NA, no, TBD, yes | String (3) | AF |
| D | isSedimentExp | Indicates whether exposure to sediments is prohibited. | NA, no, TBD, yes | String (3) | AF |
| D | isIndustCommUse | Indicates whether land use is restricted to industrial/commercial only. | NA, no, TBD, yes | String (3) | AF |
| D | isAgriOrParkUse | Indicates whether agricultural and park land use is prohibited. | NA, no, TBD, yes | String (3) | AF |
| | associatedCost | Annual maintenance/compliance costs with the LUC. | | Integer (Long) | AF |
| | programManager | The Environmental Restoration point of contact responsible for the feature. | | String (100) | AF |
| | pocContactInfo | The contact information for the point of contact responsible for the feature. | | String (255) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |

Data Layer Specification – Land Use Control

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |

Data Layer Specification – Land Use Control

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |

Data Layer Specification – Land Use Control

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for LandUseControl_A is:

| Table Name | Identifier | Source |
|-------------------|--------------------|----------------------|
| er_LandUseControl | landUseControlIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Data Layer Specification – Potential Environmental Site

This Data Layer Specification (DLS) defines geospatial data specifications for the PotentialEnvSite_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

An area that is suspected to possess environmental contamination.

Data Layer Details

| | |
|--|---|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | PotentialEnvSite_A |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **6 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that

Data Layer Specification – Potential Environmental Site

95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the PotentialEnvSite_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the PotentialEnvSite_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------------|--|--|--------------------|----------|
| | potentialEnvSiteIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | SDSFIE |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | The local name for the Potential Environmental Site. | String (80) | SDSFIE |

Data Layer Specification – Potential Environmental Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|---|--------------------|----------|
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Potential Environmental Site that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | erpimsSiteID | The ID for the feature taken from ERPIMS. | | Integer (Long) | AF |
| | eeshmisSiteID | The ID for the potential environmental site taken from EESOH-MIS. | | String (80) | AF |

Data Layer Specification – Potential Environmental Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------|---|--|--------------------|----------|
| | potentialEnvSiteID | The locally assigned ID for the potential environmental site. | | String (80) | AF |
| D | isAOC | Indicates whether the site is an Area of Concern. | NA, no, TBD, yes | String (3) | AF |
| D | envHazard | Indicates the broad category or type of the most prevalent or serious environmental hazard present at the site. | For a list of domain values, see EnvHazard in Appendix 1. | String (25) | AF |
| D | pollutionSource | The actual or suspected source of the pollutant. | For a list of domain values, see RestPollutionSource in Appendix 1. | String (20) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |

Data Layer Specification – Potential Environmental Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |

Data Layer Specification – Potential Environmental Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |

Data Layer Specification – Potential Environmental Site

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPEs geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for PotentialEnvSite_A is:

| Table Name | Identifier | Source |
|---------------------|----------------------|----------------------|
| er_PotentialEnvSite | potentialEnvSiteIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

Data Layer Specification – Potential Environmental Site

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Environmental Restoration, Potential Environmental Site

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

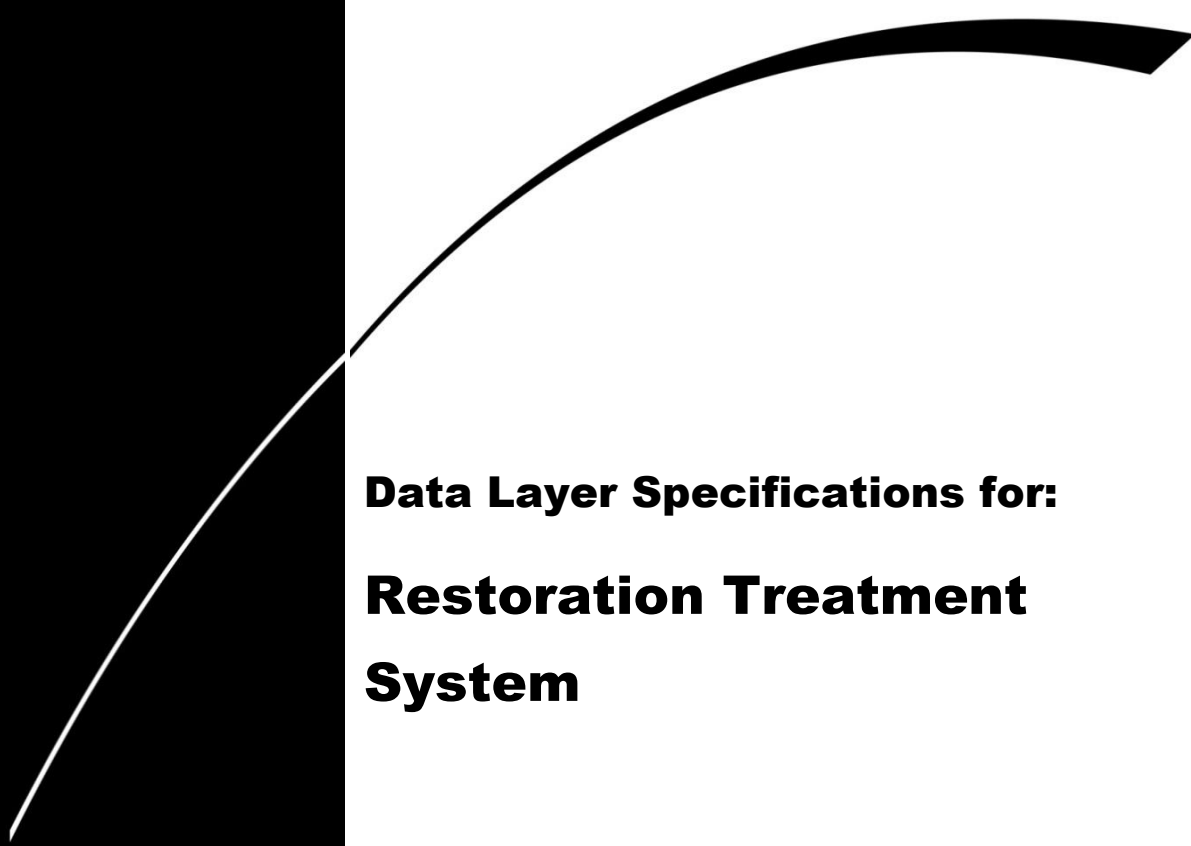

| DOMAIN TABLE NAME: EnvHazard | |
|------------------------------|--|
| ATTRIBUTE NAME: envHazard | |
| CODED DOMAIN | DEFINITION |
| bioWarfare | Residues of biological warfare items, materials, or waste are present. |
| bldgEnvHazard | Building environmental hazards are present. |
| chemPollution | Polluted by the residues of one or more chemical (nonpetroleum) products or wastes. |
| chemWarfare | Residues of chemical warfare items, materials, or waste are present. |
| leadShot | Lead Shot contamination is present at the site |
| medPollution | Polluted by the residues of one or more medical or infectious products or wastes. |
| mixedPollution | Polluted by the residues of one or more chemical, petroleum, and radioactive products or wastes. |
| NA | Not Applicable: No value exists. |
| none | Investigation and/or further study has revealed that there are no environmental hazards present at the site. |
| ordnanceExplosiveWaste | Residues of ordnance and explosive waste items, materials, or waste are present. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| petroPollution | Polluted by the residues of one or more petroleum products or wastes. |
| radPollution | Polluted by the residues of one or more radioactive products or wastes. |
| radWarfare | Residues of radioactive warfare items, materials, or waste are present. |
| skeet | Skeet shards are present at the site. |
| solidWaste | Polluted by solid waste. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The environmental hazard is unknown. |

| DOMAIN TABLE NAME: RestPollutionSource | |
|--|--|
| ATTRIBUTE NAME: pollutionSource | |
| CODED DOMAIN | DEFINITION |
| agriOther | Other type of agricultural activity or area. |
| aircraftCrash | The area or site of an aircraft crash. |
| bioChemWarfare | An area or site where biological or chemical warfare materials have been manufactured, stored, used, or disposed of. |
| burialPit | The area or site of a burial pit. |
| construction | An area of past or present construction activity. |
| fuelTank | A tank (either above or below ground) used to store fuel. |
| hazwasteDisposal | An area or site where hazardous waste has been buried or disposed of. |
| industrial | An industrial activity or area. |
| industrialTank | Storage tank (either above or below ground) used to store chemicals, hazardous materials, or hazardous waste. |
| landfill | Area or site of a past or present solid waste landfill. |
| mining | Present or past mining operations. |
| munitions | Area or site used for testing, training, or disposal of conventional munitions. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| radioactive | An area or site where radioactive materials or waste have been manufactured, stored, used, or disposed of. |
| spillLand | An uncontrolled release or spill occurring on land. |
| spillWater | An uncontrolled release or spill occurring on a water body (e.g., river, stream, lake, ocean). |

Data Layer Specification – Potential Environmental Site

| DOMAIN TABLE NAME: RestPollutionSource | |
|--|---|
| ATTRIBUTE NAME: pollutionSource | |
| stockyard | An area where domestic animals (e.g., cattle, sheep, swine, or horses) are kept temporarily for slaughter, market, or shipping. |
| tankFarm | An area consisting of several storage tanks (either above or below ground) which contain fuel or chemicals regulated by environmental regulatory authorities. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| urban | An urban or municipal area. |
| wastewtrDomestic | Wastewater originating from a residential or urban area. |
| wastewtrIndust | Wastewater originating from an industry or industrial complex. |

Data Layer Specification – Restoration Treatment System

This Data Layer Specification (DLS) defines geospatial data specifications for the RestorationTreatmentSystem_A data layers implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

An area depicting the extent of restoration treatment infrastructure. This feature class is based on the footprint of features in RestTreatmentSysComp_L along with any other treatment system components such as wells.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | RestTreatmentSystem_A |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalRestoration |
| Previous Layer Names: | None |
| Geometry Type: | Polygon |
| Data Steward Organization (Program Area): | Program Area: Environmental Restoration |
| Data Steward POC: | AFCEC/CZTE Air Force Environmental Restoration Program SME |
| Representation: | <ul style="list-style-type: none">• The polygons for the restoration treatment system area will represent the boundaries of a treatment system.• Each individual restoration treatment system area is represented by a single area feature. |

Implementing Authorities and Regulations

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level** for polygons that represent the “footprint” of features in the RestTreatmentSysComp_L and/or RestTreatmentSysComp_P data layers. If the polygon represents actual individual infrastructure the data should be within **50 centimeters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the RestTreatmentSystem_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the RestTreatmentSystem_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-------------------------|--|--|--------------------|----------|
| | restTreatmentSystemIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | The local name for the Restoration Treatment System. | String (80) | SDSFIE |

Data Layer Specification – Restoration Treatment System

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|---|--------------------|----------|
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Restoration Treatment System that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | restSystemID | The ID for the feature taken from ERPIMS. | | String (20) | AF |
| | eesohtmSiteID | The ID for the restoration site(s) taken from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (80) | AF |

Data Layer Specification – Restoration Treatment System

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------------|--|--|--------------------|----------|
| | associatedOU | Identifies the associated operable unit. | | String (100) | AF |
| D | technologyType | A description of the type of technology used to treat the contamination. | For the list of domain values see TechnologyType in Appendix 1. | String (30) | AF |
| D | treatmentSysType | A description of the type of treatment system. | For a list of domain values, see TreatmentType in Appendix 1. | String (25) | AF |
| D | treatmentSysOperStatus | Operational status of the treatment system component. | For a list of domain values, see TreatmentSysOperStatus in Appendix 1. | String (10) | AF |
| | operationalStatusDate | The date operational status was determined. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| D | displacement | Indicates the displacement of the treatment system. | For a list of domain values, see TreatmentSysDisplacement in Appendix 1. | String (15) | AF |
| | programManager | The Environmental Restoration point of contact responsible for the feature. | | String (100) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | | String (100) | AF |

Data Layer Specification – Restoration Treatment System

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard . | String (5) | AF |

Data Layer Specification – Restoration Treatment System

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |

Data Layer Specification – Restoration Treatment System

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. The business table for RestTreatmentSystem_A is:

| Table Name | Identifier | Source |
|-----------------------|-------------------------|----------------------|
| er_RstrnTrtmntSysPipe | restTreatmentSystemIDFK | Program Area Manager |

Business Table Attributes for er_RstrnTrtmntSysPipe

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|-------------------------|--|---|--------------------|
| | restTreatmentSystemIDFK | The unique identifier for each restoration treatment system feature. Used to relate back to the RestTreatmentSystem_A attribute table. | | String (21) |
| D | pipeType | The type of pipe used in the system component. | For a list of domain values, see PipeType in Appendix 1. | String (15) |
| | pipeDescription | Narrative description of the pipe component (e.g. 3" SCH. 40 PVC conduit and instrumental wiring). | | String (255) |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Environmental Restoration, Restoration Treatment System

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: PipeType | |
|-----------------------------|---|
| ATTRIBUTE NAME: pipeType | |
| CODED DOMAIN | DEFINITION |
| electrical | Electrical pipe. |
| gas | Gas pipe. |
| groundwater | Groundwater pipe. |
| instrumentation | Instrumentation pipe. |
| makeupWater | Makeup water pipe. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| pneumatic | Pneumatic pipe. |
| potableWater | Potable water pipe. |
| scrubberWater | Scrubber water pipe. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| telephone | Telephone pipe. |
| treatedWater | Treated water pipe. |
| unknown | The pipe type is unknown. |
| vapor | Vapor pipe. |

| DOMAIN TABLE NAME: TechnologyType | |
|-----------------------------------|--|
| ATTRIBUTE NAME: technologyType | |
| CODED DOMAIN | DEFINITION |
| airSparging | Technology type is air sparging. |
| airSpargingSoilVaporExtract | Technology type is air sparging/soil vapor extraction. |
| amendInject | Technology type is amendment injection. |
| amendInjectRecirc | Technology type is amendment injection and recirculation. |
| bioreactor | Technology type is a bioreactor. |
| bioreactorRecirc | Technology type is a bioreactor and recirculation. |
| bioslurping | Technology type is bioslurping (bioventing and vacuum-enhanced free product recovery). |
| bioventing | Technology type is bioventing. |
| dualSoilVaporGrndwtrExtract | Technology type is dual soil vapor/groundwater extraction. |
| electroSep | Technology type is electrokinetic separation. |
| excavation | Technology type is excavation. |
| landfillCap | Technology type is a landfill cap. |
| landfillETCover | Technology type is a landfill evapotranspiration cover. |
| NA | Not Applicable: No value exists. |
| naturalAtten | Technology type is natural attenuation. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| permReactBarrier | Technology type is a permeable reaction barrier. |
| phytoremediation | Technology type is phytoremediation. |
| pumpTreat | Technology type is pump and treat. |
| soilFlushing | Technology type is soil flushing. |
| soilVaporExtract | Technology type is soil vapor extraction. |
| solidifStabil | Technology type is solidification/stabilization. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| thermInject | Technology type is thermal injection. |

Data Layer Specification – Restoration Treatment System

| DOMAIN TABLE NAME: TechnologyType | |
|-----------------------------------|---|
| ATTRIBUTE NAME: technologyType | |
| thermSoilVaporExtract | Technology type is thermal soil vapor extraction. |
| vacEnhanceFreeProdRecov | Technology type is vacuum-enhanced free product recovery. |

| DOMAIN TABLE NAME: TreatmentSysDisplacement | |
|---|---|
| ATTRIBUTE NAME: displacement | |
| CODED DOMAIN | DEFINITION |
| aboveground | The treatment system is located aboveground. |
| aboveAndBelow | The treatment system is located both above and belowground. |
| belowground | The treatment system is located belowground. |
| NA | Not Applicable: No value exists. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

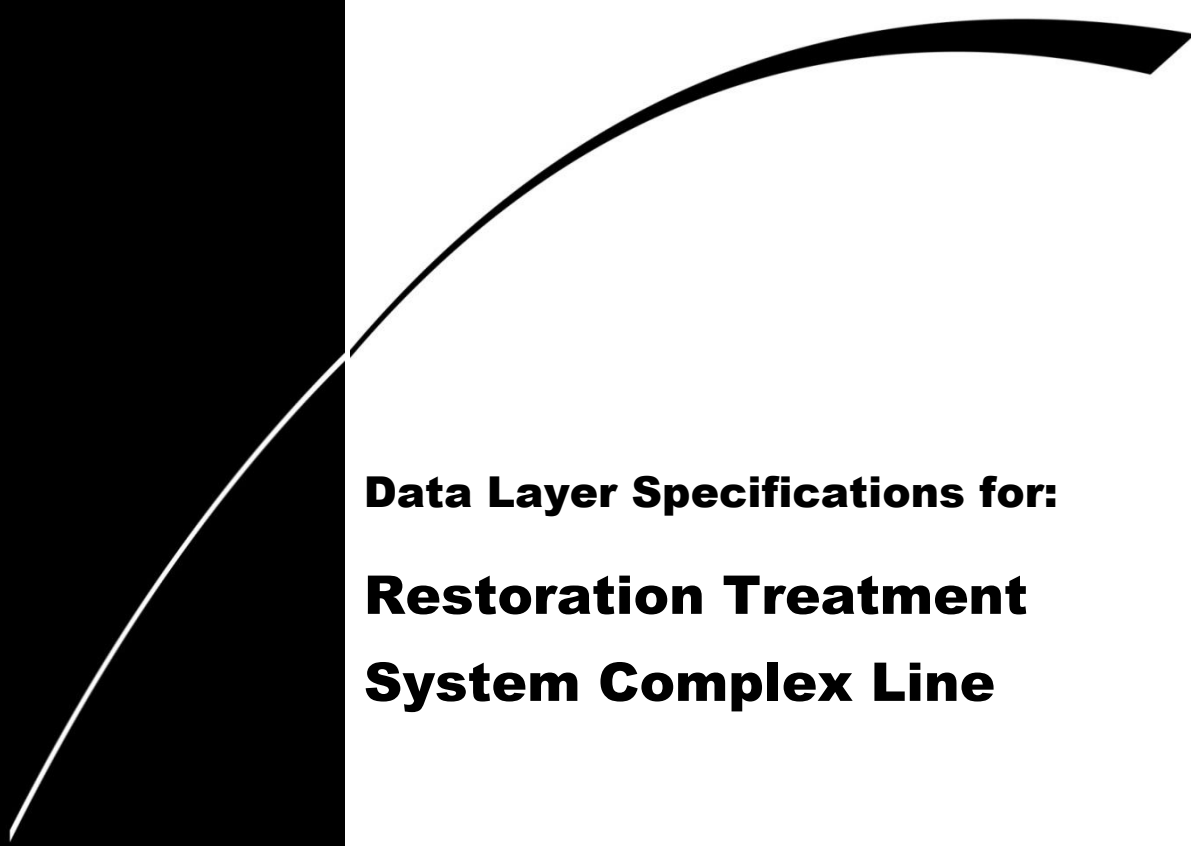

| DOMAIN TABLE NAME: TreatmentSysOperStatus | |
|---|---|
| ATTRIBUTE NAME: treatmentSysOperStatus | |
| CODED DOMAIN | DEFINITION |
| abandoned | Treatment complex is abandoned. |
| active | Treatment complex is active. |
| inactive | Treatment complex is inactive. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| proposed | Treatment complex is proposed. |
| removed | Treatment complex has been removed. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: TreatmentType | |
|----------------------------------|--|
| ATTRIBUTE NAME: treatmentSysType | |
| CODED DOMAIN | DEFINITION |
| airGasTreatment | Treatment type is air and gas treatment. |
| airStripper | Treatment type is air stripper treatment. |
| airStripperGAC | Treatment type is air stripper and granular active carbon treatment. |
| biostimBioaugCommProduct | Treatment type is biostimulation and bioaugmentation using commercial products. |
| biostimCommercialProduct | Treatment type is biostimulation using a commercial product. |
| biostimEmulsifiedVegOil | Treatment type is biostimulation using emulsified vegetable oil. |
| biostimEVObioaugKB1 | Treatment type is biostimulation using emulsified vegetable oil and bioaugmentation using KB-1. |
| biostimSugar | Treatment type is biostimulation using sugar (e.g. sodium lactate, lactic acid, propionate, butyrate, molasses, high-fructose corn syrup, etc.). |
| biostimVegOil | Treatment type is biostimulation using vegetable oil. |
| catalyticOxidation | Treatment type is catalytic oxidation treatment. |
| chemOxidationFenton | Treatment type is chemical oxidation using Fenton's Reagent. |
| chemOxidationOzone | Treatment type is chemical oxidation using ozone. |
| chemOxidationPermanganate | Treatment type is chemical oxidation using permanganate. |
| chemOxidationPersulfate | Treatment type is chemical oxidation using persulfate. |
| gasTreatment | Treatment type is gas treatment (alkane gases - propane, methane). |
| granularActiveCarbon | Treatment type is granular active carbon treatment. |
| heat | Treatment type is heat treatment. |

Data Layer Specification – Restoration Treatment System

| DOMAIN TABLE NAME: TreatmentType | |
|----------------------------------|---|
| ATTRIBUTE NAME: treatmentSysType | |
| ionExchangeTreatment | Treatment type is an ion exchange treatment. |
| iron | Treatment type is iron addition (zero valent and/or nano-scale). |
| ironVegOil | Treatment type is iron addition and vegetable oil. |
| mulchVegOil | Treatment type is mulching and vegetable oil. |
| mulchVegOilIron | Treatment type is mulching, vegetable oil and iron addition. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| resin | Treatment type is resin treatment. |
| steam | Treatment type is steam treatment. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| thermOxidation | Treatment type is thermal oxidation treatment. |
| ultraviolet | Treatment type is ultraviolet treatment. |
| uvOxidation | Treatment type is ultraviolet and oxidation treatment. |

Data Layer Specification – Restoration Treatment System Complex Line

This Data Layer Specification (DLS) defines geospatial data specifications for the RestTreatmentSysComp_L data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

Line features (e.g. pipes) related to a treatment system.

Data Layer Details

| | |
|--|---|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | RestTreatmentSysComp_L |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalRestoration |
| Previous Layer Names: | env_remediation_utility_line |
| Geometry Type: | Line |
| Data Steward Organization (Program Area): | Program Area: Environmental Restoration |
| Data Steward POC: | AFCEC/CZTE Air Force Environmental Restoration Program SME |
| Representation: | <ul style="list-style-type: none">Restoration treatment system complex lines will be represented as a continuous unbroken line. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|---------------------------------|--|
| HQ AF/A7CAN | <ul style="list-style-type: none">AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007AFI32-7062, Base Comprehensive Planning, 13 November 2009AFI32-7064, Integrated Natural Resources Management, 18 November 2014AFI32-7065, Managing Cultural Resources Management Program, 19 November 2014AFH32-9007, Managing Air Force Real Property, 1 May 1999AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009Real Property Inventory Management (RPIM), v2.0 |

| Implementing Program(s): | Driver(s): |
|--------------------------|---|
| | <ul style="list-style-type: none"> • RPIM 3.0, extracted 4/2009 • AFI32-7020, The Environmental Restoration Program, 7 November 2014 • Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) • Resource Conservation and Recovery Act (RCRA) of 1976 |

Geometry/Topology

| Line Features: |
|---|
| Lines must not self-overlap. |
| Lines must not self-intersect. |
| Lines must be single part features. |
| Lines must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **50 centimeters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the RestTreatmentSysComp_L layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the RestTreatmentSysComp_L data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|---|--------------------|----------|
| | restTreatmentSysCompIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | The local name for the Restoration Treatment System Complex. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Restoration Treatment System Complex that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | lengthSize | The value of the measured length. | | Double | AF |

Data Layer Specification – Restoration Treatment System Complex Line

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|-----------------|--------------------|----------|
| D | lengthSizeUOM | The unit of measure for the calculated length. | foot | String (25) | AF |
| | latitudeFrom | The latitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | latitudeTo | The latitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeFrom | The longitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeTo | The longitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | elevationFrom | The elevation component of the beginning (upstream/upgradient) coordinate point in feet. | | Double | AF |
| | elevationTo | The elevation component of the ending (downstream/down gradient) coordinate point in feet. | | Double | AF |

Data Layer Specification – Restoration Treatment System Complex Line

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|---|---|--------------------|----------|
| D | elevationUOM | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | restSystemID | The ID for the feature taken from ERPIMS. | | String (20) | AF |
| | eeshmisSiteID | The ID for the restoration site(s) taken from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (80) | AF |
| | associatedOU | Identifies the associated operable unit. | | String (100) | AF |
| D | technologyType | A description of the type of technology used to treat the contamination. | For the list of domain values see TechnologyType in Appendix 1. | String (30) | AF |
| D | treatmentSysType | A description of the type of treatment system. | For a list of domain values, see TreatmentType in Appendix 1. | String (25) | AF |
| D | displacement | Indicates the displacement of the treatment system. | For a list of domain values, see TreatmentSysDisplacement in Appendix 1. | String (15) | AF |
| | depthInches | Depth below ground of the component (in inches). This is most important for the depth of pipe trenches. For some components the depth is effectively zero or undefined (enter 0). | | Double | AF |
| | widthInches | Width of the component (in inches). This is most important for the width of pipe trenches. For some components the width is effectively zero or undefined (enter 0). | | Double | AF |

Data Layer Specification – Restoration Treatment System Complex Line

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------------|--|--|--------------------|----------|
| D | treatmentSysOperStatus | Operational status of the treatment system component. | For a list of domain values, see TreatmentSysOperStatus in Appendix 1. | String (10) | AF |
| | operationalStatusDate | The date operational status was determined. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| | programManager | The Environmental Restoration point of contact responsible for the feature. | | String (100) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |

Data Layer Specification – Restoration Treatment System Complex Line

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |

Data Layer Specification – Restoration Treatment System Complex Line

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. The business table for RestTreatmentSysComp_L is:

| Table Name | Identifier | Source |
|-------------------------|--------------------------|----------------------|
| er_RstrnTrtmntCmplxPipe | restTreatmentSysCompIDFK | Program Area Manager |

Business Table Attributes for er_RstrnTrtmntCmplxPipe

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|--------------------------|---|---|--------------------|
| | restTreatmentSysCompIDFK | The unique identifier for each restoration treatment system component feature. Used to relate back to the RestTreatmentSysComp_L attribute table. | | String (21) |
| D | pipeType | The type of pipe used in the system component. | For a list of domain values, see PipeType in Appendix 1. | String (15) |

Data Layer Specification – Restoration Treatment System Complex Line

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|-----------------|--|------------------------------|--------------------|
| | pipeDescription | Narrative description of the pipe component (e.g. 3" SCH. 40 PVC conduit and instrumental wiring). | | String (255) |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Environmental Restoration, Restoration Treatment System Complex Line

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: PipeType | |
|-----------------------------|---|
| ATTRIBUTE NAME: pipeType | |
| CODED DOMAIN | DEFINITION |
| electrical | Electrical pipe. |
| gas | Gas pipe. |
| groundwater | Groundwater pipe. |
| instrumentation | Instrumentation pipe. |
| makeupWater | Makeup water pipe. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| pneumatic | Pneumatic pipe. |
| potableWater | Potable water pipe. |
| scrubberWater | Scrubber water pipe. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| telephone | Telephone pipe. |
| treatedWater | Treated water pipe. |
| unknown | The pipe type is unknown. |
| vapor | Vapor pipe. |

| DOMAIN TABLE NAME: TechnologyType | |
|-----------------------------------|--|
| ATTRIBUTE NAME: technologyType | |
| CODED DOMAIN | DEFINITION |
| airSparging | Technology type is air sparging. |
| airSpargingSoilVaporExtract | Technology type is air sparging/soil vapor extraction. |
| amendInject | Technology type is amendment injection. |
| amendInjectRecirc | Technology type is amendment injection and recirculation. |
| bioreactor | Technology type is a bioreactor. |
| bioreactorRecirc | Technology type is a bioreactor and recirculation. |
| bioslurping | Technology type is bioslurping (bioventing and vacuum-enhanced free product recovery). |
| bioventing | Technology type is bioventing. |
| dualSoilVaporGrndwtrExtract | Technology type is dual soil vapor/groundwater extraction. |
| electroSep | Technology type is electrokinetic separation. |
| excavation | Technology type is excavation. |
| landfillCap | Technology type is a landfill cap. |
| landfillETCover | Technology type is a landfill evapotranspiration cover. |
| NA | Not Applicable: No value exists. |
| naturalAtten | Technology type is natural attenuation. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| permReactBarrier | Technology type is a permeable reaction barrier. |
| phytoremediation | Technology type is phytoremediation. |
| pumpTreat | Technology type is pump and treat. |
| soilFlushing | Technology type is soil flushing. |
| soilVaporExtract | Technology type is soil vapor extraction. |
| solidifStabil | Technology type is solidification/stabilization. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| thermInject | Technology type is thermal injection. |

Data Layer Specification – Restoration Treatment System Complex Line

| DOMAIN TABLE NAME: TechnologyType | |
|-----------------------------------|---|
| ATTRIBUTE NAME: technologyType | |
| thermSoilVaporExtract | Technology type is thermal soil vapor extraction. |
| vacEnhanceFreeProdRecov | Technology type is vacuum-enhanced free product recovery. |

| DOMAIN TABLE NAME: TreatmentSysDisplacement | |
|---|---|
| ATTRIBUTE NAME: displacement | |
| CODED DOMAIN | DEFINITION |
| aboveground | The treatment system is located aboveground. |
| aboveAndBelow | The treatment system is located both above and belowground. |
| belowground | The treatment system is located belowground. |
| NA | Not Applicable: No value exists. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

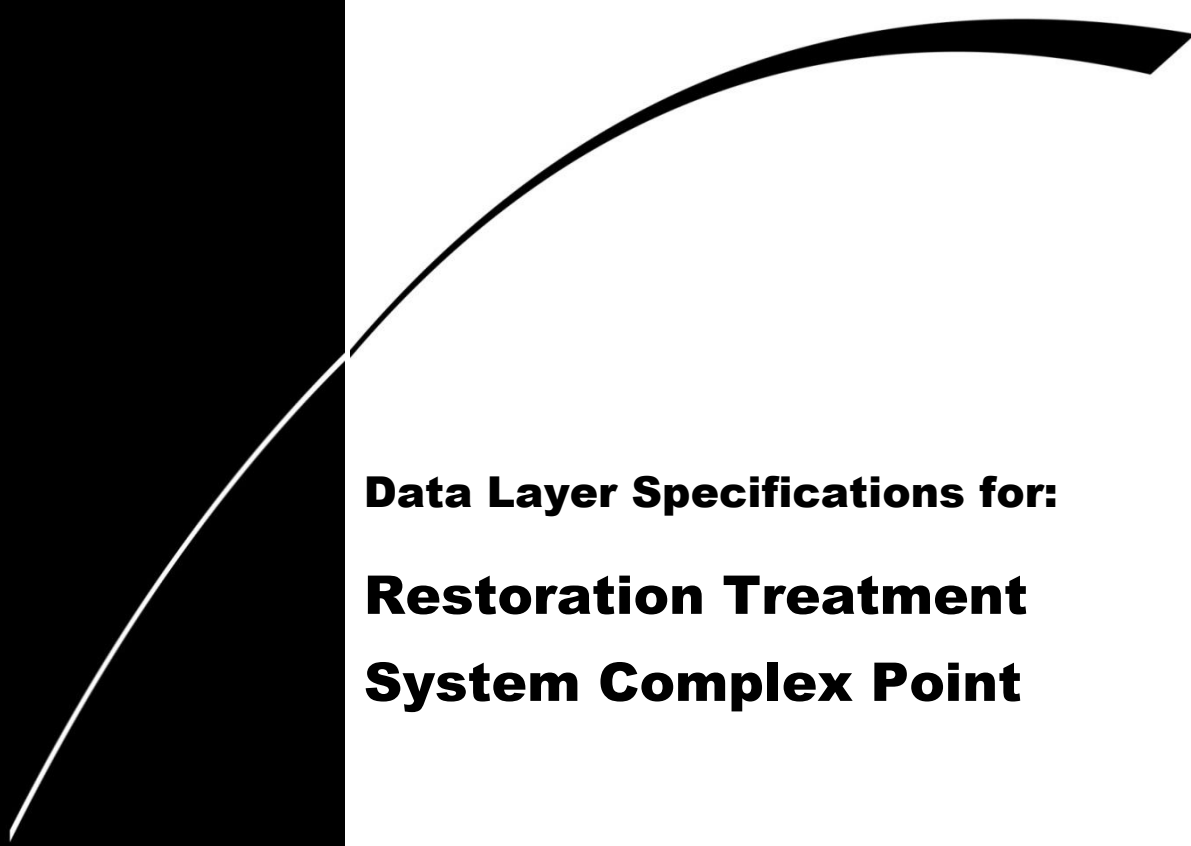

| DOMAIN TABLE NAME: TreatmentSysOperStatus | |
|---|---|
| ATTRIBUTE NAME: treatmentSysOperStatus | |
| CODED DOMAIN | DEFINITION |
| abandoned | Treatment complex is abandoned. |
| active | Treatment complex is active. |
| inactive | Treatment complex is inactive. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| proposed | Treatment complex is proposed. |
| removed | Treatment complex has been removed. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: TreatmentType | |
|----------------------------------|--|
| ATTRIBUTE NAME: treatmentSysType | |
| CODED DOMAIN | DEFINITION |
| airGasTreatment | Treatment type is air and gas treatment. |
| airStripper | Treatment type is air stripper treatment. |
| airStripperGAC | Treatment type is air stripper and granular active carbon treatment. |
| biostimBioaugCommProduct | Treatment type is biostimulation and bioaugmentation using commercial products. |
| biostimCommercialProduct | Treatment type is biostimulation using a commercial product. |
| biostimEmulsifiedVegOil | Treatment type is biostimulation using emulsified vegetable oil. |
| biostimEVObioaugKB1 | Treatment type is biostimulation using emulsified vegetable oil and bioaugmentation using KB-1. |
| biostimSugar | Treatment type is biostimulation using sugar (e.g. sodium lactate, lactic acid, propionate, butyrate, molasses, high-fructose corn syrup, etc.). |
| biostimVegOil | Treatment type is biostimulation using vegetable oil. |
| catalyticOxidation | Treatment type is catalytic oxidation treatment. |
| chemOxidationFenton | Treatment type is chemical oxidation using Fenton's Reagent. |
| chemOxidationOzone | Treatment type is chemical oxidation using ozone. |
| chemOxidationPermanganate | Treatment type is chemical oxidation using permanganate. |
| chemOxidationPersulfate | Treatment type is chemical oxidation using persulfate. |
| gasTreatment | Treatment type is gas treatment (alkane gases - propane, methane). |
| granularActiveCarbon | Treatment type is granular active carbon treatment. |
| heat | Treatment type is heat treatment. |

Data Layer Specification – Restoration Treatment System Complex Line

| DOMAIN TABLE NAME: TreatmentType | |
|----------------------------------|---|
| ATTRIBUTE NAME: treatmentSysType | |
| ionExchangeTreatment | Treatment type is an ion exchange treatment. |
| iron | Treatment type is iron addition (zero valent and/or nano-scale). |
| ironVegOil | Treatment type is iron addition and vegetable oil. |
| mulchVegOil | Treatment type is mulching and vegetable oil. |
| mulchVegOilIron | Treatment type is mulching, vegetable oil and iron addition. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| resin | Treatment type is resin treatment. |
| steam | Treatment type is steam treatment. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| thermOxidation | Treatment type is thermal oxidation treatment. |
| ultraviolet | Treatment type is ultraviolet treatment. |
| uvOxidation | Treatment type is ultraviolet and oxidation treatment. |

Data Layer Specification – Restoration Treatment System Complex Point

This Data Layer Specification (DLS) defines geospatial data specifications for the RestTreatmentSysComp_P data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

Point features (e.g. wells) related to a treatment system.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | RestTreatmentSysComp_P |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalRestoration |
| Previous Layer Names: | Env_remediation_utility_point EnvRegulatedFacilityComplex_P |
| Geometry Type: | Point |
| Data Steward Organization (Program Area): | Program Area: Environmental Restoration |
| Data Steward POC: | AFCEC/CZTE Air Force Environmental Restoration Program SME |
| Representation: | <ul style="list-style-type: none">Restoration treatment system complex points are a representation of the coordinate location of that feature. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|---------------------------------|--|

| | <ul style="list-style-type: none"> • RPIM 3.0, extracted 4/2009 • AFI32-7020, The Environmental Restoration Program, 7 November 2014 • Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) • Resource Conservation and Recovery Act (RCRA) of 1976 |

Geometry/Topology

| Point Features: |
|--------------------------|
| Points must be disjoint. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **50 centimeters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the RestTreatmentSysComp_P layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the RestTreatmentSysComp_P data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|---|--------------------|----------|
| | restTreatmentSysCompIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDFSIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | The local name for the Restoration Treatment System Complex. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Restoration Treatment System Complex that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |

Data Layer Specification – Restoration Treatment System Complex Point

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|---|---|--------------------|----------|
| | latitude | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | MGRS | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation | The elevation of the subject item in relation to a datum. | | Double | AF |
| | elevationUOM | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | restSystemID | The ID for the feature taken from ERPIMS. | | String (20) | AF |
| | eeshmisSiteID | The ID for the restoration site(s) taken from EESOH-MIS. | Allowed values can be obtained from EESOH-MIS. | String (80) | AF |
| | associatedOU | Identifies the associated operable unit. | | String (100) | AF |
| D | technologyType | A description of the type of technology used to treat the contamination. | For the list of domain values see TechnologyType in Appendix 1. | String (30) | AF |
| D | treatmentSysType | A description of the type of treatment system. | For a list of domain values, see TreatmentType in Appendix 1. | String (25) | AF |
| D | displacement | Indicates the displacement of the treatment system. | For a list of domain values, see TreatmentSysDisplacement in Appendix 1. | String (15) | AF |

Data Layer Specification – Restoration Treatment System Complex Point

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------------|--|--|--------------------|----------|
| D | treatmentSysOperStatus | Operational status of the treatment system component. | For a list of domain values, see TreatmentSysOperStatus in Appendix 1. | String (10) | AF |
| | operationalStatusDate | The date operational status was determined. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| | totalDepth | The Z-value representing the total depth of the well, piezometer, or borehole in feet. | | Double | |
| D | totalDepthUOM | The unit of measure used for the total depth. | foot | String (25) | |
| | holeDiam | The diameter for the hole in inches. | | Double | |
| D | holeDiamUOM | The unit of measure for the diameter. | inch | String (25) | |
| | casingDiam | The diameter for the casing in inches. | | Double | |
| D | casingDiamUOM | The unit of measure for the diameter. | inch | String (25) | |
| | casingTopElev | The top elevation of the casing in feet. | | Double | |
| D | casingElevUOM | The unit of measure for the top elevation. | foot | String (25) | |
| | programManager | The Environmental Restoration point of contact responsible for the feature. | | String (100) | |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |

Data Layer Specification – Restoration Treatment System Complex Point

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |

Data Layer Specification – Restoration Treatment System Complex Point

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |

Data Layer Specification – Restoration Treatment System Complex Point

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. The business table for RestTreatmentSysComp_P is:

| Table Name | Identifier | Source |
|---------------------------|--------------------------|----------------------|
| er_RestTreatmentSysComp_P | restTreatmentSysCompIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Environmental Restoration, Restoration Treatment System Complex Point

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: TechnologyType | |
|-----------------------------------|--|
| ATTRIBUTE NAME: technologyType | |
| CODED DOMAIN | DEFINITION |
| airSparging | Technology type is air sparging. |
| airSpargingSoilVaporExtract | Technology type is air sparging/soil vapor extraction. |
| amendInject | Technology type is amendment injection. |
| amendInjectRecirc | Technology type is amendment injection and recirculation. |
| bioreactor | Technology type is a bioreactor. |
| bioreactorRecirc | Technology type is a bioreactor and recirculation. |
| bioslurping | Technology type is bioslurping (bioventing and vacuum-enhanced free product recovery). |
| bioventing | Technology type is bioventing. |
| dualSoilVaporGrndwtrExtract | Technology type is dual soil vapor/groundwater extraction. |
| electroSep | Technology type is electrokinetic separation. |
| excavation | Technology type is excavation. |
| landfillCap | Technology type is a landfill cap. |
| landfillETCover | Technology type is a landfill evapotranspiration cover. |
| NA | Not Applicable: No value exists. |
| naturalAtten | Technology type is natural attenuation. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| permReactBarrier | Technology type is a permeable reaction barrier. |
| phytoremediation | Technology type is phytoremediation. |
| pumpTreat | Technology type is pump and treat. |
| soilFlushing | Technology type is soil flushing. |
| soilVaporExtract | Technology type is soil vapor extraction. |
| solidifStabil | Technology type is solidification/stabilization. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| thermInject | Technology type is thermal injection. |
| thermSoilVaporExtract | Technology type is thermal soil vapor extraction. |
| vacEnhanceFreeProdRecov | Technology type is vacuum-enhanced free product recovery. |

| DOMAIN TABLE NAME: TreatmentSysDisplacement | |
|---|---|
| ATTRIBUTE NAME: displacement | |
| CODED DOMAIN | DEFINITION |
| aboveground | The treatment system is located aboveground. |
| aboveAndBelow | The treatment system is located both above and belowground. |
| belowground | The treatment system is located belowground. |
| NA | Not Applicable: No value exists. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

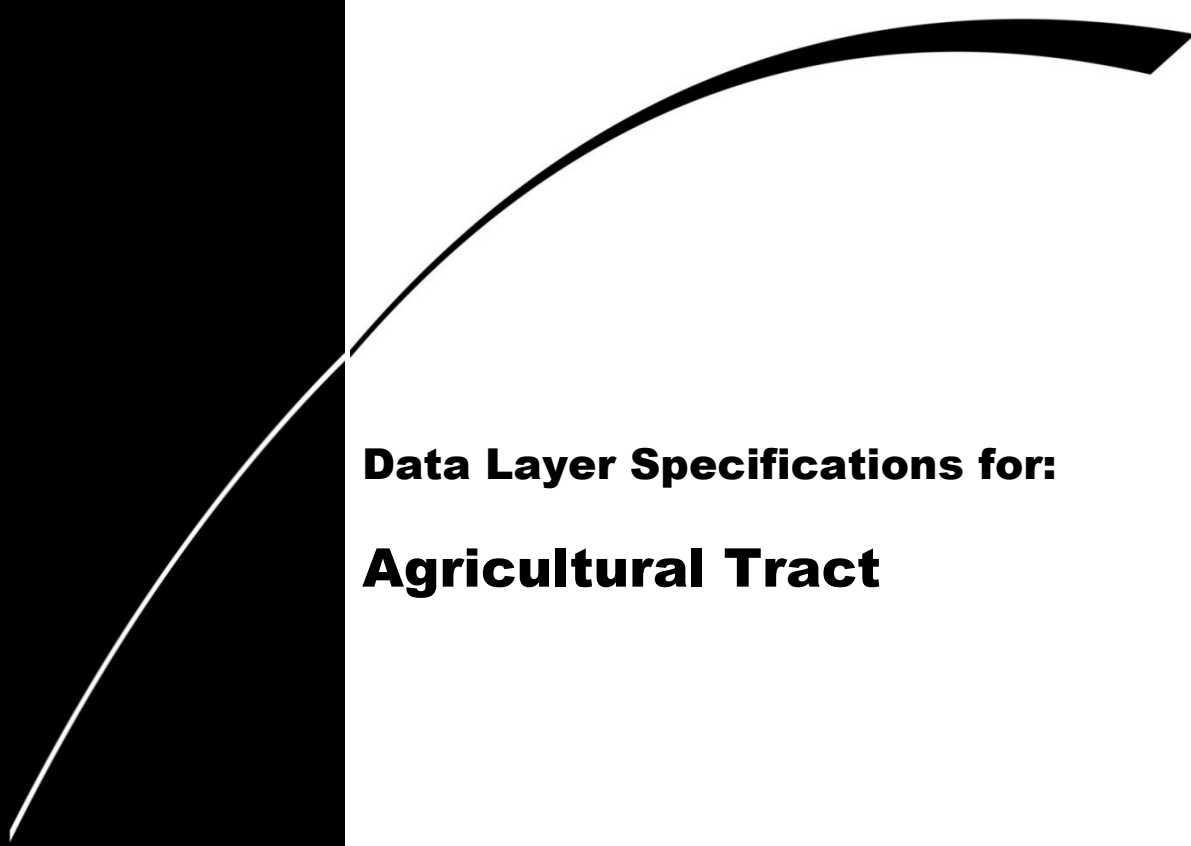

| DOMAIN TABLE NAME: TreatmentSysOperStatus | |
|---|---------------------------------|
| ATTRIBUTE NAME: treatmentSysOperStatus | |

Data Layer Specification – Agricultural Tract

This Data Layer Specification (DLS) defines geospatial data specifications for the AgriculturalTract_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

A location specifically designated for agricultural use such as crops, grazing, and commercial fish ponds.

Data Layer Details

| | |
|--|---|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | AgriculturalTract_A |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalNaturalResources |
| Previous Layer Names: | agricultural_tract_area contiguous_farming_unit_area AgriculturalTract |
| Geometry Type: | Polygon |
| Data Steward Organization (Program Area): | Program Area: Natural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Natural Resources Program SME |
| Representation: | <ul style="list-style-type: none"> • Agricultural tract areas are represented as closed polygons depicting the outermost extent of the area. • Each individual agricultural tract area is represented by a single area feature. |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must not overlap. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **6 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the AgricultureTract_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the AgriculturalTract_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|---|--------------------|----------|
| | agTractIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Agricultural Tract. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Agricultural Tract that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |

Data Layer Specification – Agricultural Tract

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------------|--|---|--------------------|----------|
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| D | agricultureTractType | Indicates the type of agriculture occurring on this tract. | For a list of domain values, see AgricultureTractType in Appendix 1. | String (12) | SDSFIE |
| D | isLeased | Identifies if agricultural tract is leased. | NA, no, TBD, yes | String (3) | AF |
| | outgrantID | A unique identifier used to permanently and uniquely identify an outgrant agreement. | | String (20) | SDSFIE |
| | leaseeName | The name of the current tract leasee. | | String (255) | |
| | tractNum | A unique number used to identify a parcel of land. | | String (20) | SDSFIE |

Data Layer Specification – Agricultural Tract

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|---|--|--------------------|----------|
| | tractRentPayment | The dollar value per unit of measure for the rent payment. | | Integer (Long) | |
| D | tractRentUOM | The unit of measure for rent payment. | | String (15) | |
| | commPondArea | The total surface area, in acres, of commercial fish ponds on the tract. | | Double | AF |
| D | commPondAreaUOM | Commercial fish pond area unit of measure. | acre | String (20) | AF |
| | commPondDepth | The estimated average depth, in feet, of commercial fish ponds on the tract. | | Double | AF |
| D | commPondDepthUOM | Commercial fish pond depth unit of measure. | foot | String (25) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |

Data Layer Specification – Agricultural Tract

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |

Data Layer Specification – Agricultural Tract

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |

Data Layer Specification – Agricultural Tract

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for AgriculturalTract_A is:

| Table Name | Identifier | Source |
|----------------------|-------------|----------------------|
| nr_AgriculturalTract | agTractIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

Data Layer Specification – Agricultural Tract

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Attribute Domain Tables

| DOMAIN TABLE NAME: AgricultureTractType | |
|---|---|
| ATTRIBUTE NAME: agricultureTractType | |
| CODED DOMAIN | DEFINITION |
| aquaculture | Aquaculture. |
| grazing | Grazing. |
| hay | Hay. |
| NA | Not Applicable: No value exists. |
| orchard | Orchard. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| rowCrop | Row crop. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: TractRentUOM | |
|---------------------------------|---|
| ATTRIBUTE NAME: tractRentUOM | |
| CODED DOMAIN | DEFINITION |
| acre | The tract rent payment is per acre. |
| animalUnitMonth | The tract rent payment is per animal unit month (AUM). |
| tract | The tract rent payment is per tract. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

Data Layer Specification – Coastal Zone Management Area

This Data Layer Specification (DLS) defines geospatial data specifications for the CoastalZoneMgtArea_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

The area regulated under the Coastal Zone Management Act. Each state has its own guidelines for defining this area.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | CoastalZoneMgtArea_A |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must not overlap. |
| Polygons must not have gaps. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **12 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the CoastalZoneMgtArea_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the CoastalZoneMgtArea_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------------------|--|---|--------------------|----------|
| | coastalZoneMgtAreaID PK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Coastal Zone Management Area. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Coastal Zone Management Area that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |

Data Layer Specification – Coastal Zone Management Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|--|--------------------|----------|
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |

Data Layer Specification – Coastal Zone Management Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard . | String (5) | AF |

Data Layer Specification – Coastal Zone Management Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |

Data Layer Specification – Coastal Zone Management Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for CoastalZoneMgtArea_A is:

| Table Name | Identifier | Source |
|-----------------------|------------------------|----------------------|
| nr_CoastalZoneMgtArea | CoastalZoneMgtAreaIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

Data Layer Specification – Coastal Zone Management Area

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Data Layer Specification – Dispersed Recreation Area

This Data Layer Specification (DLS) defines geospatial data specifications for the DispersedRecArea_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

Non-developed, dispersed outdoor recreation areas managed by Natural Resources. This may include, but is not limited to: hunting areas, multi-use recreation areas, and watchable wildlife areas.

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **6 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the DispersedRecArea_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the DispersedRecArea_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|--|--------------------|----------|
| | dispersedRecAreaIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Dispersed Recreation Area. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Dispersed Recreation Area that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |

Data Layer Specification – Dispersed Recreation Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|-----------------------------------|--------------------|----------|
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | useDateStart | The month and day of the beginning of the time period in which recreation is allowed, if seasonal. Format for date is MMDD (i.e. September 15 = 0915). | | Integer (Long) | AF |
| | useDateEnd | The ending month and day of the time period in which recreation is allowed. Format for date is MMDD (i.e. September 15 = 0915). | | Integer (Long) | AF |
| | govDesig | Any government designator for the dispersed recreation area. | | String (20) | AF |

Data Layer Specification – Dispersed Recreation Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|--|--------------------|----------|
| | useAcres | The quantity representing the size of the dispersed recreation use area in acres. | | Double | AF |
| D | accessCategory | The access category as defined in Air Force Instruction 32-7064. | | String (10) | AF |
| | allowedUser | The Allowable User category(ies) as defined in Air Force Instruction 32-7064. | | String (255) | AF |
| | allowedActivity | The activity(ies) allowed such as hunting, fishing, trapping, or other activities as defined in Air Force Instruction 32-7064. | | String (255) | AF |
| | allowedSpecies | The species that are allowed to be harvested in the area. | For a list of domain values, see AllowedSpecies in Appendix 1. | String (255) | AF |
| D | trapType | The type of trap used in the trapping area. | For a list of domain values, see TrapType in Appendix 1. | String (11) | AF |
| D | isADAaccessible | Identifies if the feature is handicapped accessible. | NA, no, TBD, yes | String (3) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |

Data Layer Specification – Dispersed Recreation Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |

Data Layer Specification – Dispersed Recreation Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |

Data Layer Specification – Dispersed Recreation Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPEs geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for DispersedRecArea_A is:

| Table Name | Identifier | Source |
|---------------------|----------------------|----------------------|
| nr_DispersedRecArea | dispersedRecAreaIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

Data Layer Specification – Dispersed Recreation Area

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Natural Resources, Dispersed Recreation Area

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: AccessCategory | |
|-----------------------------------|---|
| ATTRIBUTE NAME: accessCategory | |
| CODED DOMAIN | DEFINITION |
| NA | Not Applicable: No value exists. |
| offLimits | The access category for the area is Off Limits. |
| open | The access category for the area is Open. |
| restricted | The access category for the area is Restricted. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: TrapType | |
|-----------------------------|---|
| ATTRIBUTE NAME: trapType | |
| CODED DOMAIN | DEFINITION |
| cage | Cage trap. |
| coilSpring | Coil spring trap. |
| jaw | Jaw trap. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| 3/1/2018 | EssentialFishHabitat_20180301 | <ul style="list-style-type: none"> Updated the “Definition,” “Geometry/Topology,” “Sources and Source Selection,” “Positional Accuracy,” “Attributes,” “Business Tables,” and “Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Attribute Domain Tables” sections. |

Data Layer Specification – Essential Fish Habitat

This Data Layer Specification (DLS) defines geospatial data specifications for the EssentialFishHabitat_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

Bodies of water and substrate required by fish for spawning, breeding, feeding, or growth to maturity. These are the areas defined in Fishery Management Plans, and regulated under the Magnuson-Stevens Fishery Conservation and Management Act.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | EssentialFishHabitat_A |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalNaturalResources |
| Previous Layer Names: | essential_fish_habitat_area SpeciesSpecificHabitat |
| Geometry Type: | Polygon |
| Data Steward Organization (Program Area): | Program Area: Natural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Natural Resources Program SME |
| Representation: | <ul style="list-style-type: none">• Essential fish habitat areas are represented as closed polygons depicting the outermost extent of the area.• Each individual essential fish habitat area is represented by a single area feature. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|---------------------------------|---|
| HQ AF/A7CAN | <ul style="list-style-type: none">• AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007• AFI32-7062, Comprehensive Planning, 27 June 2013• AFI32-7064, Integrated Natural Resources Management, 18 November 2014• AFI32-7065, Cultural Resources Management Program, 19 November 2014• AFH32-9007, Managing Air Force Real Property, 1 May 1999• AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 |

| Implementing Program(s): | Driver(s): |
|--------------------------|--|
| | <ul style="list-style-type: none"> • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 |

Geometry/Topology

| Polygon Features: |
|--|
| EssentialFishHabitat_A must be covered by one of the following feature classes; WaterBody_A, WaterFeature_A, or Wetland_A. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: publicly available data from the National Oceanic and Atmospheric Administration Fisheries Service or Regional Fishery Management Councils, planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the EssentialFishHabitat_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the EssentialFishHabitat_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------------------|--|---|--------------------|----------|
| | essentialFishHabitatID PK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Essential Fish Habitat. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Essential Fish Habitat that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |

Data Layer Specification – Essential Fish Habitat

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-------------------|--|--|--------------------|----------|
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| D | lifeStage | Life stage of the fish species for which the habitat is used. If 'MULTIPLE' is selected, list the stages in the sdsFeatureDescription field. | For a list of domain values, see LifeStage in Appendix 1. | String (15) | AF |
| | habitatSurveyDate | Last date on which the area of the fish habitat was examined. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| | waterDepth | The water depth, in feet, of the fish habitat. | | Double | AF |

Data Layer Specification – Essential Fish Habitat

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|--|--------------------|----------|
| | habitatDesc | Description of the habitat area designated as Essential Fish Habitat (EFH). Example: Surface Waters, Bottom Habitat, Pelagic Waters, Hard Bottom, etc. | | String (255) | AF |
| D | isHAPC | Indicates whether a habitat is designated as a Habitat Areas of Particular Concern (HAPC). | NA, no, TBD, yes | String (3) | AF |
| D | reasonHAPC | Identifies the reason why the habitat is designated as a Habitat Areas of Particular Concern (HAPC). | For a list of domain values, see ReasonHAPC in Appendix 1. | String (15) | AF |
| D | reefZone | The code that represents a category of reef zone type. | For a list of domain values, see ReefZone in Appendix 1. | String (30) | AF |
| | salinity | The total quantity of dissolved salts in water, measured by weight; 1 Practical Salinity Unit (PSU) = 1 Parts Per Thousand (PPT). | | String (50) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |

Data Layer Specification – Essential Fish Habitat

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard . | String (5) | AF |

Data Layer Specification – Essential Fish Habitat

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |

Data Layer Specification – Essential Fish Habitat

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPEs geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for EssentialFishHabitat_A is:

| Table Name | Identifier | Source |
|-------------------------|--------------------------|----------------------|
| nr_EssentialFishHabitat | essentialFishHabitatIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

Data Layer Specification – Essential Fish Habitat

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Natural Resources, Essential Fish Habitat

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: LifeStage | |
|------------------------------|--|
| ATTRIBUTE NAME: lifeStage | |
| CODED DOMAIN | DEFINITION |
| adult | An adult is a fully developed and mature individual. |
| eggParturition | An egg parturition is an animal reproductive body consisting of an ovum or embryo together with nutritive and protective envelopes. |
| juvenile | A juvenile is considered to be physiologically immature or undeveloped. |
| larvae | The larvae is an immature free-living form of most invertebrates, amphibians, and fish which at hatching is fundamentally unlike its parent and must metamorphose. |
| multiple | The area has been determined to be essential for multiple life stages. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: ReasonHAPC | |
|-------------------------------|--|
| ATTRIBUTE NAME: reasonHAPC | |
| CODED DOMAIN | DEFINITION |
| ecological | The importance of the ecological function provided by the habitat. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| rarity | The rarity of the habitat type. |
| sensitivity | The extent to which the habitat is sensitive to human-induced environmental degradation. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: ReefZone | |
|------------------------------|---|
| ATTRIBUTE NAME: reefZone | |
| CODED DOMAIN | DEFINITION |
| btwBackReefAndForeReef | The flattened, emergent (especially during low tides) or nearly emergent segment of a reef. This zone lies between the back reef and fore reef zones. (7) |
| btwCrestAndLagoon | Area between the seaward edge of a lagoon floor and the landward edge of a reef crest. This zone is present when a reef crest and lagoon exist. (5) |
| btwInterTideZoneAndBackReef | Shallow area between the shoreline intertidal zone and the back reef of a reef or a barrier island. (4) |
| btwInterTideZoneAndReefCrest | Shallow (semi-exposed) area between the shoreline intertidal zone and the reef crest of a fringing reef. (6) |
| btwReefCrestAndBankEdge | Seaward edge of reef crest that slopes into deeper water to the landward edge of the bank. (8) |
| channel | Naturally occurring channels that often cut across several other zones. (11) |
| deepWaterToInsularShelf | Deep water extending offshore to the beginning of the escarpment where the insular shelf drops off into deep, oceanic water. (9) |
| excavation | Area in which natural geomorphology is disrupted or altered by excavation or dredging. (12) |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| otherDelineations | Other Delineations (14) |

Data Layer Specification – Essential Fish Habitat

| DOMAIN TABLE NAME: ReefZone | |
|-----------------------------|--|
| ATTRIBUTE NAME: reefZone | |
| patchy | Patchy reef zone. (1) |
| shelf | The edge of the bank/shelf where depth increases rapidly into deep, oceanic water. (10) |
| shoreToShelf | Area with near-vertical slope from shore to shelf or shelf escarpment. (3) |
| sparse | Sparse reef zone. (2) |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| uninterpretable | Zone, cover, and structure uninterpretable due to turbidity, cloud cover, water depth, or other interference. (13) |

Data Layer Specification – Fauna Incident Point

This Data Layer Specification (DLS) defines geospatial data specifications for the FaunaIncidentPoint_P data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

Locations of wildlife sightings, including human and wildlife interactions.

Data Layer Details

Geometry/Topology

There are no feature class specific topology rules for FaunaIncidentPoint_P.

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the FaunaIncidentPoint_P layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the FaunaIncidentPoint_P data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|---|--------------------|----------|
| | faunaIncidentPntIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Fauna Incident Point. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Fauna Incident Point that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | latitude | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | MGRS | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |

Data Layer Specification – Fauna Incident Point

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|---|--------------------|----------|
| | elevation | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | commonName | The common name of the species. | | String (255) | AF |
| | scientificName | The scientific name of the species. | | String (255) | AF |
| D | faunaSex | A descriptor of the sex of the animal. | For a list of domain values, see SpeciesSex in Appendix 1. | String (15) | AF |
| | incidentDate | The date the incident occurred. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| | estAge | The estimated age at time of incident. | | String (50) | AF |
| D | condition | Condition of the animal when found. | For a list of domain values, see Condition in Appendix 1. | String (15) | AF |
| | foundDate | The date the carcass or injured fauna was found. Format for date is YYYYMMDD (i.e. September 15, 1994 = 19940915). | | Integer (Long) | AF |
| | foundTime | The time the carcass or injured fauna was found. Format for time is HHMMSS. Use the standard 24 hour clock. | | Integer (Long) | AF |
| | faunaLoc | Site where animal was discovered. | | String (50) | AF |
| | tagNum | A descriptor for the animal tag number. | | String (16) | AF |
| | tagNum2 | A descriptor for an additional animal tag number. | | String (16) | AF |

Data Layer Specification – Fauna Incident Point

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|---|--------------------|----------|
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | SDSFIE |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |

Data Layer Specification – Fauna Incident Point

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |

Data Layer Specification – Fauna Incident Point

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute

Data Layer Specification – Fauna Incident Point

table and business table. Additional attributes to be determined by the Program Area Manager. The business table for FaunaIncidentPoint_P is:

| Table Name | Identifier | Source |
|-----------------------|----------------------|----------------------|
| nr_FaunaIncidentPoint | faunaIncidentPntIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Natural Resources, Fauna Incident Point

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: Condition | |
|------------------------------|---|
| ATTRIBUTE NAME: condition | |
| CODED DOMAIN | DEFINITION |
| alive | The fauna was found alive. |
| driedCarcass | The fauna was a dried carcass when found. |
| freshDead | The fauna was freshly dead when found. |
| modDecomp | The fauna was moderately decomposed when found. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| severDecomp | The fauna was severely decomposed when found. |
| skeleton | The fauna was a skeleton when found. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: SpeciesSex | |
|-------------------------------|---|
| ATTRIBUTE NAME: faunaSex | |
| CODED DOMAIN | DEFINITION |
| both | The fauna exhibits both male and female sexes. |
| female | The fauna is of the female sex. |
| male | The fauna is of the male sex. |
| NA | Not Applicable: No value exists. |
| neither | The fauna is of neither male nor female sex. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| undetermined | The sex of the fauna is undetermined. |

Data Layer Specification – Fire Area

This Data Layer Specification (DLS) defines geospatial data specifications for the FireArea_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

The final fire perimeter when the fire is declared 100% contained.

Data Layer Details

| | |
|--|--|

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **12 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the FireArea_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum

Data Layer Specification – Fire Area

to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the FireArea_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|--|--------------------|----------|
| | fireAreaIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Fire Area. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Fire Area that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |

Data Layer Specification – Fire Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|-----------------|--------------------|----------|
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | fireID | The locally assigned ID for the fire. | | String (20) | AF |
| | fireStartDate | The actual or estimated date that the fire started. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| | fireStartTime | The actual or estimated time that the fire started. Format for time is 24 hour notation HHMM (i.e., 4:00 PM = 1600). | | Integer (Long) | AF |
| | containDate | The date that the fire was officially declared 100% contained. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |

Data Layer Specification – Fire Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|---|--------------------|----------|
| D | causeType | The suspected or confirmed cause of the wildland fire. | For a list of domain values, see CauseType in Appendix 1. | String (20) | AF |
| D | fireType | The type of wildland fire, such as wild, prescribed, or managed. | For a list of domain values, see FireType in Appendix 1. | String (15) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |

Data Layer Specification – Fire Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |

Data Layer Specification – Fire Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |

Data Layer Specification – Fire Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|-----------------------|----------------|--------------------|----------|
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for FireArea_A is:

| Table Name | Identifier | Source |
|-------------|-------------|----------------------|
| nr_FireArea | fireAreaDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Data Layer Specification – Fire Area

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Natural Resources, Fire Area

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: CauseType | |
|------------------------------|---|
| ATTRIBUTE NAME: causeType | |
| CODED DOMAIN | DEFINITION |
| arson | The fire was determined to have been caused by arson. |
| camperHunter | The fire was determined to have been caused by a camper or a hunter. |
| campfire | The fire was determined to have been caused by an unattended or uncontrolled campfire. |
| children | The fire was determined to have been caused by children. |
| escapedPresc | The fire was determined to have been caused by an escaped prescribed fire. |
| fireworks | The fire was determined to have been caused by fireworks. |
| lghtngNat | The fire was determined to have been caused by lightning or other natural forces. |
| milLiveAF | The fire was determined to have been the result of a military live fire mission conducted by the Air Force. |
| milLiveArmy | The fire was determined to have been the result of a military live fire mission conducted by the Army. |
| milLiveCoast | The fire was determined to have been the result of a military live fire mission conducted by the Coast Guard. |
| milLiveNavyUSMC | The fire was determined to have been the result of a military live fire mission conducted by the Navy or the Marine Corps. |
| milNonLiveAF | The fire was determined to have been the result of a military non-live fire exercise conducted by the Air Force. |
| milNonLiveArmy | The fire was determined to have been the result of a military non-live fire exercise conducted by the Army. |
| milNonLiveCoast | The fire was determined to have been the result of a military non-live fire exercise conducted by the Coast Guard. |
| milNonLiveNavyUSMC | The fire was determined to have been the result of a military non-live fire exercise conducted by the Navy or the Marine Corps. |
| motorEquip | The fire was determined to have been caused by motorized equipment. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| powerLine | The fire was determined to have been caused by vegetation contact with a power line. |
| railroad | The fire was determined to have been caused by railroad equipment. |
| rekindle | The fire was determined to have been caused by rekindle. |
| rxBurn | The fire was determined to have been prescribed. |
| smoking | The fire was determined to have been caused by smoking materials. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The cause of the fire is unknown. |
| vehicle | The fire was determined to have been caused by a motor vehicle. |

| DOMAIN TABLE NAME: FireType | |
|-----------------------------|--|
| ATTRIBUTE NAME: fireType | |
| CODED DOMAIN | DEFINITION |
| falseAlarm | The fire was a false alarm. |
| managed | The fire was caused by an unplanned source but was managed like a prescribed burn. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| pileBurn | The fire was a pile burn. |
| prescribed | The fire was a prescribed burn. |

Data Layer Specification – Fire Area

| DOMAIN TABLE NAME: FireType | |
|-----------------------------|---|
| ATTRIBUTE NAME: fireType | |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The type of fire is unknown. |
| wild | The fire was a wildfire. |

Data Layer Specification – Fire Break Line

This Data Layer Specification (DLS) defines geospatial data specifications for the FireBreakLine_L data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

Designated firebreaks. Firebreaks are defined as linear features cleared and maintained to mineral soil. The primary purpose of a firebreak is fire containment (e.g. an existing road may be designated as a firebreak, but not every road need be defined as a firebreak).

Data Layer Details

| | |

Geometry/Topology

| Line Features: |
|---|
| Lines must not overlap. |
| Lines must not intersect. |
| Lines must not self-overlap. |
| Lines must not self-intersect. |
| Lines must be single part features. |
| Lines must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **6 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the FireBreakLine_L layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the FireBreakLine data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|---|--------------------|----------|
| | fireBreakLineIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Fire Break. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Fire Break that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | lengthSize | The value of the measured length. | Recorded to the 1/1000 of a foot. | Double | AF |

Data Layer Specification – Fire Break Line

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|-----------------|--------------------|----------|
| D | lengthSizeUOM | The unit of measure for the calculated length. | foot | String (25) | AF |
| | latitudeFrom | The latitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | latitudeTo | The latitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeFrom | The longitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeTo | The longitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | elevationFrom | The elevation component of the beginning (upstream/upgradient) coordinate point in feet. | | Double | AF |
| | elevationTo | The elevation component of the ending (downstream/down gradient) coordinate point in feet. | | Double | AF |

Data Layer Specification – Fire Break Line

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|---|--|--------------------|----------|
| D | elevationUOM | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | widthSize | The width of the feature in feet. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | widthSizeUOM | The unit of measure for the width. | foot | String (25) | AF |
| | maintFreq | The actual average interval between maintenance cycles for the firebreak in months. | | Double | AF |
| | maintDate | The date the fire break was last maintained. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |

Data Layer Specification – Fire Break Line

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |

Data Layer Specification – Fire Break Line

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |

Data Layer Specification – Fire Break Line

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for FireBreakLine_L is:

| Table Name | Identifier | Source |
|------------------|-------------------|----------------------|
| nr_FireBreakLine | fireBreakLineIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

Data Layer Specification – Fire Break Line

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Data Layer Specification – Flood Plain Area

This Data Layer Specification (DLS) defines geospatial data specifications for the FloodPlainArea_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

An area where statistically derived flood inundation may exist within a specific return period, e.g. 100 year or 500 year chance of flooding, for insurance and floodplain management purposes.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | FloodPlainArea_A |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must not overlap. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: publicly available data from the Federal Emergency Management Agency National Flood Hazard Layer, planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **1.25 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the FloodPlainArea_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the FloodPlainArea_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|---|--|--------------------|----------|
| | floodPlainAreaIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE0001000000 1, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Floodplain Area. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Floodplain Area that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |

Data Layer Specification – Flood Plain Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|-----------------------------------|--------------------|----------|
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | dateLast | The date the flood zone was last covered with water. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| | dateStudy | Date the study occurred. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915) | | Integer (Long) | AF |
| | floodElev | The maximum elevation or height, in feet, of the waters within the flood zone. | | Double | AF |
| | lastMax | The maximum height or elevation, in feet, associated with the last flood. | | Double | AF |

Data Layer Specification – Flood Plain Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|---|--|--------------------|----------|
| D | elevUOM | The unit of measure for the elevation or height. | foot | String (25) | AF |
| D | isControls | Identifies whether flood controls are in place. | NA, no, TBD, yes | String (3) | AF |
| | freqYrs | The normal frequency (in years) when the flood zone is covered with water. | | Integer (Long) | AF |
| | useLimits | Restrictions on the use of the feature. | | String (255) | AF |
| | firmZone | The FEMA Flood Insurance Rate Map hazard area zone code. | | String (16) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |

Data Layer Specification – Flood Plain Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |

Data Layer Specification – Flood Plain Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |

Data Layer Specification – Flood Plain Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for FloodPlainArea_A is:

| Table Name | Identifier | Source |
|-------------------|--------------------|----------------------|
| nr_FloodPlainArea | floodPlainAreaIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

Data Layer Specification – Flood Plain Area

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Data Layer Specification – Forest Compartment

This Data Layer Specification (DLS) defines geospatial data specifications for the ForestCompartment_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

A geographic area used for forest management, typically containing one or more forest stands.

Data Layer Details

| | |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must not overlap. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **6 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the ForestCompartment_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The

Data Layer Specification – Forest Compartment

horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the ForestCompartment_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---------------------------|--|---|--------------------|----------|
| | forestCompartmentID PK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Forest Compartment. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Forest Compartment that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |

Data Layer Specification – Forest Compartment

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|--|--------------------|----------|
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | compartmentName | A locally unique name used to identify the compartment. | Local name of forest compartment; may be the same as Feature Name. | String (50) | SDSFIE |
| | compartmentNum | The number assigned to the forest compartment. | | String (15) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |

Data Layer Specification – Forest Compartment

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard . | String (5) | AF |

Data Layer Specification – Forest Compartment

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |

Data Layer Specification – Forest Compartment

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPEs geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for ForestCompartment_A is:

| Table Name | Identifier | Source |
|----------------------|-----------------------|----------------------|
| nr_ForestCompartment | forestCompartmentIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

Data Layer Specification – Forest Compartment

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the ForestMgtArea_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|---|--------------------|----------|
| | forestMgtAreaIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Forest Management Area. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Forest Management Area that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |

Data Layer Specification – Forest Management Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|--|--------------------|----------|
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| D | managingAgency | The managing agency of the forest area. | For the list of domain values see GovMgt in Appendix 1. | String (10) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |

Data Layer Specification – Forest Management Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |

Data Layer Specification – Forest Management Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for ForestMgtArea_A is:

| Table Name | Identifier | Source |
|------------------|-------------------|----------------------|
| nr_ForestMgtArea | forestMgtAreaIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

Data Layer Specification – Forest Management Area

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Natural Resources, Forest Management Area

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: GovMgt | |
|--------------------------------|---|
| ATTRIBUTE NAME: managingAgency | |
| CODED DOMAIN | DEFINITION |
| city | City Government |
| county | County Government |
| federal | Federal Government |
| local | Local |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| state | State Government |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

Data Layer Specification – Forest Product Harvest

This Data Layer Specification (DLS) defines geospatial data specifications for the ForestProductHarvest_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

A location where forest timber has been (or will be) cut, felled, and gathered.

Geometry/Topology

| |
|--|
| Polygon Features: |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **6 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the ForestProductHarvest_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the ForestProductHarvest_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| | forestProductHarvestIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Forest Product Harvest area. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Forest Product Harvest area that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |

Data Layer Specification – Forest Product Harvest

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|--|--------------------|----------|
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | contractNumber | The contract number for the feature. | | String (30) | SDSFIE |
| | harvestYear | The calendar year in which the harvest occurred. | | Integer (Long) | SDSFIE |
| | cost | The gross cost of production in U.S. Dollars. | | Double | SDSFIE |
| | revenue | The gross revenue of the harvest in U.S. Dollars. | | Double | SDSFIE |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |

Data Layer Specification – Forest Product Harvest

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard . | String (5) | AF |

Data Layer Specification – Forest Product Harvest

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |

Data Layer Specification – Forest Product Harvest

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for ForestProductHarvest_A is:

| Table Name | Identifier | Source |
|-------------------------|--------------------------|----------------------|
| nr_ForestProductHarvest | forestProductHarvestIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

Data Layer Specification – Forest Product Harvest

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Data Layer Specification – Forest Stand

This Data Layer Specification (DLS) defines geospatial data specifications for the ForestStand_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

A group of trees occupying a given area and sufficiently uniform in species composition, age, structure, site quality, and condition so as to be distinguishable from the forest in adjoining areas.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | ForestStand_A |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalNaturalResources |
| Previous Layer Names: | forest_stand_area riparian_forest_buffer_area tree_plantation_area ForestStand |
| Geometry Type: | Polygon |
| Data Steward Organization (Program Area): | Program Area: Natural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Natural Resources Program SME |
| Representation: | <ul style="list-style-type: none">• Forest stands are represented as closed polygons depicting the outermost extent of the stand area.• Each individual forest stand is represented by a single area feature. |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must not overlap. |
| ForestStand_A must be covered by ForestCompartment_A. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **6 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the ForestStand_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the ForestStand_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|---|--------------------|----------|
| | forestStandIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Forest Stand. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Forest Stand that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |

Data Layer Specification – Forest Stand

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|---|--------------------|----------|
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | compartmentNum | The number assigned to the forest compartment. | | String (15) | AF |
| D | forestCategory | A category of forest defined by its dominant tree species, vegetation and/or locality factors. | For a list of domain values, see ForestCategory in Appendix 1. | String (35) | SDSFIE |

Data Layer Specification – Forest Stand

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|---|--------------------|----------|
| D | forestHealth | A measure of the robustness of forest ecosystems. Aspects of forest health include biological diversity; soil, air, and water productivity; natural disturbances; and the capacity of the forest to provide a sustaining flow of goods and services for people. | For a list of domain values, see ForestHealth in Appendix 1. | String (10) | AF |
| | forestAcres | The quantity representing the amount of forested acres in the feature. | | Double | AF |
| D | registry | Highest level at which stand is recognized. | For a list of domain values, see RegStatus in Appendix 1. | String (15) | AF |
| D | isCommProduct | Indicates whether the stand meets criteria for commercial productivity. The stand is capable (>20 cubic foot per acre per year of growth), accessible, and available for commercial forest product production. | NA, no, TBD, yes | String (3) | AF |
| D | isRegulated | Indicates whether the feature is regulated by Federal, State or local jurisdiction or no regulation. | NA, no, TBD, yes | String (3) | AF |
| | datePlanted | The date on which the stand area was planted. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| | standAge | The average age of trees in the stand in years. | | Integer (Long) | AF |

Data Layer Specification – Forest Stand

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | standDensity | The number of tree trunks per acre. | | Integer (Long) | AF |
| D | densityUOM | The unit of measure for the density unit area. | acre | String (20) | AF |
| | sawTimberDiam | The quantity representing the average tree diameter, in inches, at breast height of saw timber. | | Double | AF |
| | pulpwoodDiam | The quantity representing the average diameter, in inches, of the pulpwood trees at breast height. | | Double | AF |
| D | diameterUOM | The unit of measure for diameter. | inch | String (25) | AF |
| | basalArea | The quantity representing the basal area of tree trunks per acre (sqft per acre). | | Double | AF |
| | hardwoodBasal | The quantity representing the hardwood basal area (sqft per acre) quantity. This quantity must be in the same units as basalArea and pineBasal. | | Double | AF |
| | pineBasal | The quantity representing the pine basal area (sqft per acre). This quantity must be in the same units as basalArea and hardwoodBasal. | | Double | AF |
| | crownClosure1 | Measurement of the crown closure of layer1. | | Double | AF |
| | crownClosure2 | Measurement of the crown closure of layer2. | | Double | AF |

Data Layer Specification – Forest Stand

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | meanHt1 | The mean height, in feet, of layer1 within the feature. | | Double | AF |
| | meanHt2 | The mean height, in feet, of layer2 within the feature. | | Double | AF |
| D | heightUOM | The unit of measure for the height. | foot | String (25) | AF |
| | midstory | A text description of the trees in the forest midstory. | | String (50) | AF |
| | overstory | A text description of trees in the forest overstory. | | String (50) | AF |
| | pctSawTimber | The quantity representing the percentage of saw timber. | | Integer (Long) | AF |
| | pctPulpwood | The quantity representing the percentage of pulpwood in the area. | | Integer (Long) | AF |
| | pctHardwood | The quantity representing the percentage of hardwood in the area. | | Integer (Long) | AF |
| | pctPine | The quantity representing the percentage of pine trees in the area. | | Integer (Long) | AF |
| | acreValue | The quantity representing the value per acre. This should be represented as a dollar amount. | | Double | |
| | totalValue | The quantity representing the total value of the area. This should be represented as a dollar amount. | | Double | AF |

Data Layer Specification – Forest Stand

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|---|--------------------|----------|
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |

Data Layer Specification – Forest Stand

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |

Data Layer Specification – Forest Stand

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for ForestStand_A is:

| Table Name | Identifier | Source |
|----------------|-----------------|----------------------|
| nr_ForestStand | forestStandIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Natural Resources, Forest Stand

Data Layer Specification – Fuel Break Line

This Data Layer Specification (DLS) defines geospatial data specifications for the FuelBreakLine_L data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

Linear areas within which fuels characteristics have been altered that produce, either intentionally or coincidentally, more manageable fire behavior. Non-fire fuels treatment, such as clearance of vegetation along a utility right-of-way, is an example of an action that may coincidentally serve to maintain a Fuel Break Line.

Data Layer Details

| | |
|--|---|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | FuelBreakLine_L |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalNaturalResources |
| Previous Layer Names: | None |
| Geometry Type: | Line |
| Data Steward Organization (Program Area): | Program Area: Natural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Natural Resources Program SME |
| Representation: | <ul style="list-style-type: none">• Fuel break lines represent fuel reduction areas.• Fuel break line locations will be represented as a continuous unbroken line. |

Implementing Authorities and Regulations

Geometry/Topology

| Line Features: |
|---|
| Lines must not overlap. |
| Lines must not intersect. |
| Lines must not self-overlap. |
| Lines must not self-intersect. |
| Lines must be single part features. |
| Lines must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **6 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the FuelBreakLine_L layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the FuelBreakLine_L data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|--|--------------------|----------|
| | fuelBreakLineIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Fuel Break Line. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Fuel Break Line that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | lengthSize | The value of the measured length. | Recorded to the 1/1000 of a foot. | Double | AF |

Data Layer Specification – Fuel Break Line

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|-----------------|--------------------|----------|
| D | lengthSizeUOM | The unit of measure for the calculated length. | foot | String (25) | AF |
| | latitudeFrom | The latitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | latitudeTo | The latitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeFrom | The longitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeTo | The longitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | elevationFrom | The elevation component of the beginning (upstream/upgradient) coordinate point in feet. | | Double | AF |
| | elevationTo | The elevation component of the ending (downstream/down gradient) coordinate point in feet. | | Double | AF |

Data Layer Specification – Fuel Break Line

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|---|--|--------------------|----------|
| D | elevationUOM | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | widthSize | The width of the feature in feet. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | widthSizeUOM | The unit of measure for the width. | foot | String (25) | AF |
| | maintFreq | The actual average interval between maintenance cycles for the fuel break in months. | | Double | AF |
| | maintDate | The date the fuel break was last maintained. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |

Data Layer Specification – Fuel Break Line

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| D | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| D | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |

Data Layer Specification – Fuel Break Line

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| D | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| D | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |

Data Layer Specification – Fuel Break Line

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for FuelBreakLine_L is:

| Table Name | Identifier | Source |
|------------------|-------------------|----------------------|
| nr_FuelBreakLine | fuelBreakLineIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

Data Layer Specification – Fuel Break Line

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Data Layer Specification – Fuel Management Area

This Data Layer Specification (DLS) defines geospatial data specifications for the FuelMgtArea_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

Non-linear areas within which fuels characteristics have been altered that produce, either intentionally or coincidentally, more manageable fire behavior. Non-fire fuels treatments, such as mechanical or chemical reduction of fuels, are examples of actions that may coincidentally serve to maintain Fuel Management Areas.

Data Layer Details

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **12 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the FuelMgtArea_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The

Data Layer Specification – Fuel Management Area

horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the FuelMgtArea_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|---|--------------------|----------|
| | fuelMgtAreaIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Fuel Management Area. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Fuel Management Area that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |

Data Layer Specification – Fuel Management Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|--|--------------------|----------|
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (15) | AF |
| | maintFreq | The actual average interval between maintenance cycles for the fuel management area in months. | | Double | AF |
| | maintDate | The date the fuel management area was last maintained. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |

Data Layer Specification – Fuel Management Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |

Data Layer Specification – Fuel Management Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |

Data Layer Specification – Fuel Management Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for FuelMgtArea_A is:

| Table Name | Identifier | Source |
|----------------|-----------------|----------------------|
| nr_FuelMgtArea | fuelMgtAreaIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete FGDC compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Data Layer Specification – Habitat Disturbance

This Data Layer Specification (DLS) defines geospatial data specifications for the HabitatDisturbance_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

Areas that have been impacted by disturbance of some sort, either natural or human caused.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | HabitatDisturbance_A |

| HQ AF/A7CAN | <ul style="list-style-type: none">• AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007• AFI32-7062, Comprehensive Planning, 27 June 2013• AFI32-7064, Integrated Natural Resources Management, 17 September 2004• AFI32-7065, Cultural Resources Management Program, 1 June 2004• AFH32-9007, Managing Air Force Real Property, 1 May 1999• AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996• Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003• USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009• Real Property Inventory Management (RPIM), v2.0• RPIM 3.0, extracted 4/2009 |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **6 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the HabitatDisturbance_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the HabitatDisturbance_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|--|--------------------|----------|
| | habDisturbanceIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Habitat Disturbance. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Habitat Disturbance that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |

Data Layer Specification – Habitat Disturbance

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|--|--------------------|----------|
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (15) | AF |
| D | disturbanceSurveyType | Indicates the type of survey conducted to assess and delineate the disturbance. | For a list of domain values, see DisturbanceSurveyType in Appendix 1. | String (20) | AF |
| D | disturbanceType | Indicates the general type of disturbance. | For a list of domain values, see DisturbanceType in Appendix 1. | String (20) | AF |
| | disturbanceCause | A narrative describing the specific cause of the disturbance. | | String (255) | AF |
| D | disturbanceDuration | Indicates whether the disturbance is temporary or permanent in nature. Temporary disturbance would be expected to repair itself naturally without assistance, whereas permanent disturbance would require restoration/reclamation actions. | For a list of domain values, see DisturbanceDuration in Appendix 1. | String (10) | AF |
| | disturbanceDate | The date the disturbance occurred. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |

Data Layer Specification – Habitat Disturbance

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------|---|--|--------------------|----------|
| | disturbProjectName | The locally assigned name of the project that caused the disturbance. | | String (150) | AF |
| | disturbProjectID | The locally assigned ID of the project that caused the disturbance. | | String (20) | AF |
| D | isRemediated | Indicates whether remediation of the disturbance has occurred. | NA, no, TBD, yes | String (3) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |

Data Layer Specification – Habitat Disturbance

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |

Data Layer Specification – Habitat Disturbance

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |

Data Layer Specification – Habitat Disturbance

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for HabitatDisturbance_A is:

| Table Name | Identifier | Source |
|-----------------------|--------------------|----------------------|
| nr_HabitatDisturbance | habDisturbanceIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

Data Layer Specification – Habitat Disturbance

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete FGDC compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Attribute Domain Tables

| DOMAIN TABLE NAME: DisturbanceDuration | |
|--|---|
| ATTRIBUTE NAME: disturbanceDuration | |
| CODED DOMAIN | DEFINITION |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| permanent | The disturbance is considered permanent and unlikely to regenerate naturally. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| temporary | The disturbance is considered temporary and likely to regenerate naturally. |

| DOMAIN TABLE NAME: DisturbanceSurveyType | |
|--|---|
| ATTRIBUTE NAME: disturbanceSurveyType | |
| CODED DOMAIN | DEFINITION |
| damageAssessment | A Damage Assessment of unplanned disturbance was conducted. |
| disturbDelineation | A Disturbance Delineation of planned disturbance was conducted. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: DisturbanceType | |
|------------------------------------|--|
| ATTRIBUTE NAME: disturbanceType | |
| CODED DOMAIN | DEFINITION |
| burn | The disturbance was caused by fire. |
| clearing | The disturbance was caused by vegetation clearing activities. |
| construction | The disturbance was caused by construction activities. |
| historicDisturbance | The disturbance is associated with historical land use. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| vandalism | The disturbance was caused by vandalism. |
| vehicularImpact | The disturbance was caused by a vehicle or other equipment unrelated to construction activities. |

Data Layer Specification – Habitat Protective Zone

This Data Layer Specification (DLS) defines geospatial data specifications for the HabitatProtectiveZone_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

An area surrounding an identified habitat where recreation, training or other activities are restricted. This is a specific zone delineated by an agreement or law that extends beyond the actual habitat limits.

Data Layer Details

| | |
|--|---|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | HabitatProtectiveZone_A |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalNaturalResources |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the HabitatProtectiveZone_A will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the HabitatProtectiveZone_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|--|--------------------|----------|
| | habProtectiveZoneIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Habitat Protective Zone. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Habitat Protective Zone that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |

Data Layer Specification – Habitat Protective Zone

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-------------------|--|---|--------------------|----------|
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| D | speciesCat | The code indicating the class of flora or fauna. | For a list of domain values, see SpeciesCat in Appendix 1. | String (15) | AF |
| | restrictDateStart | The month and day land use restriction begins, if seasonal. Format for date is MMDD (i.e. September 15 = 0915). | | Integer (Long) | AF |
| | restrictDateEnd | The month and day land use restriction ends, if seasonal. Format for date is MMDD (i.e. September 15 = 0915). | | Integer (Long) | AF |

Data Layer Specification – Habitat Protective Zone

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|---|--------------------|----------|
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |

Data Layer Specification – Habitat Protective Zone

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |

Data Layer Specification – Habitat Protective Zone

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for HabitatProtectiveZone_A is:

| Table Name | Identifier | Source |
|--------------------------|-----------------------|----------------------|
| nr_HabitatProtectiveZone | habProtectiveZoneIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

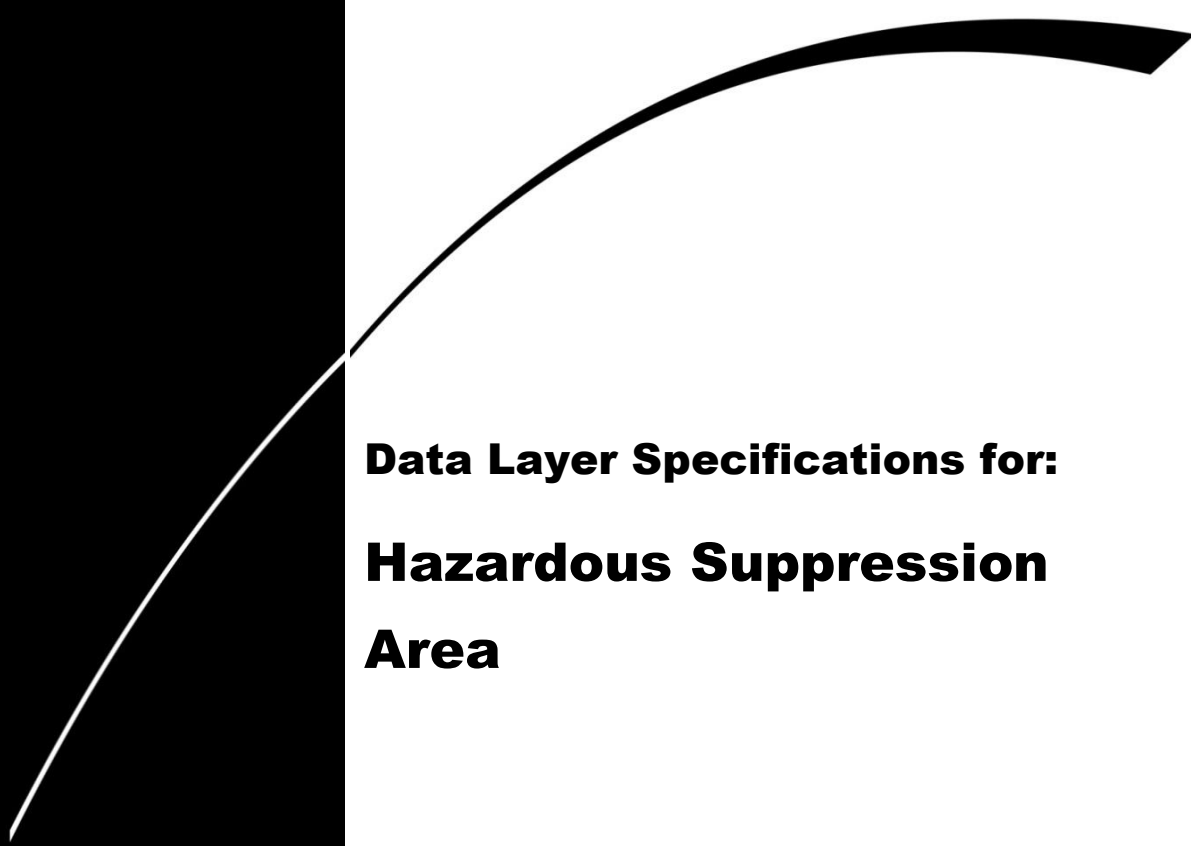

Theme Keywords: Natural Resources, Habitat Protective Zone

Attribute Domain Tables

| DOMAIN TABLE NAME: SpeciesCat | |
|-------------------------------|---|
| ATTRIBUTE NAME: speciesCat | |
| CODED DOMAIN | DEFINITION |
| amphibia | Amphibian species. |
| aves | Avian (Birds) species. |
| bryoid | Bryoid species. |
| crustacea | Crustacean species. |
| epiphyte | Epiphyte species. |
| general | An aggregate of more than one species. |
| herb | Herb species. |
| insecta | Insect species. |
| liana | Liana species. |
| mammalia | Mammal species. |
| mollusca | Mollusk species. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| pisces | Pisces (Fish) species. |
| reptilia | Reptile species. |
| shrub | Shrub species. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| thallophyte | Thallophyte species. |
| tree | Tree species. |

Data Layer Specification – Hazardous Suppression Area

This Data Layer Specification (DLS) defines geospatial data specifications for the HazSuppressionArea_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

Areas in which fire management has potential hazardous risks to assets or personnel managing the fire. Some of these areas may be off-limits to fire fighting. For example, UXO contamination, QD arcs, and ammunition storage areas are some features that should be tracked within this data layer.

Data Layer Details

| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for HazSuppressionArea_A is:

| Table Name | Identifier | Source |
|-----------------------|------------------------|----------------------|
| nr_HazSuppressionArea | hazSuppressionAreaIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Natural Resources, Hazardous Suppression Area

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: FireAttackMethod | |
|-------------------------------------|---|
| ATTRIBUTE NAME: attackMethod | |
| CODED DOMAIN | DEFINITION |
| all | All fire attack methods are authorized. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| plowing | The fire may be attacked with plowing only. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| water | The fire may be attacked with water only. |
| waterPlowing | The fire may be attacked with water and plowing only. |

| DOMAIN TABLE NAME: GroundDisturbance | |
|--------------------------------------|---|
| ATTRIBUTE NAME: groundDisturb | |
| CODED DOMAIN | DEFINITION |
| authorized | Ground disturbance activities are authorized. |
| NA | Not Applicable: No value exists. |
| notAuthorized | Ground disturbance activities are not authorized. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: SuppressionType | |
|------------------------------------|---|
| ATTRIBUTE NAME: suppressType | |
| CODED DOMAIN | DEFINITION |
| full | Full suppression is authorized. |
| NA | Not Applicable: No value exists. |
| none | No suppression is authorized. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| road | Suppression methods only requiring road access are authorized. |
| surface | Suppression methods requiring surface attack methods are authorized. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

Data Layer Specification – Historic River Alignment

This Data Layer Specification (DLS) defines geospatial data specifications for the HistoricRiverAlignment_L data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

Location(s) of previous river channels formed during the recent epoch.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | HistoricRiverAlignment_L |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalNaturalResources |
| Previous Layer Names: | historic_river_alignment_line HistoricRiverAlignment |
| Geometry Type: | Line |
| Data Steward Organization (Program Area): | Program Area: Natural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Natural Resources Program SME |
| Representation: | <ul style="list-style-type: none"> Historic river alignments are represented as unbroken lines. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|---------------------------------|--|
| HQ AF/A7CAN | <ul style="list-style-type: none"> AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007 AFI32-7062, Comprehensive Planning, 27 June 2013 AFI32-7064, Integrated Natural Resources Management, 18 November 2014 AFI32-7065, Cultural Resources Management Program, 19 November 2014 AFH32-9007, Managing Air Force Real Property, 1 May 1999 AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 Real Property Inventory Management (RPIM), v2.0 RPIM 3.0, extracted 4/2009 |

Geometry/Topology

| Line Features: |
|---|
| Lines must not self-intersect. |
| Lines must not self-overlap. |
| HistoricRiverAlignment_L must not overlap with WatercourseLine_L. |
| Lines must be single part features. |
| Lines must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the "Quality" element of the metadata. Where positional accuracy cannot be determined, this section should be populated with "Not Recorded" and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the HistoricRiverAlignment_L layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the HistoricRiverAlignment_L data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------------|--|---|--------------------|----------|
| | histRiverAlignmentIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Historic River Alignment. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Historic River Alignment that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | lengthSize | The value of the measured length. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | lengthSizeUOM | The unit of measure for the calculated length. | foot | String (25) | AF |

Data Layer Specification – Historic River Alignment

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|-----------------|--------------------|----------|
| | latitudeFrom | The latitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | latitudeTo | The latitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeFrom | The longitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeTo | The longitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | elevationFrom | The elevation component of the beginning (upstream/upgradient) coordinate point in feet. | | Double | AF |
| | elevationTo | The elevation component of the ending (downstream/down gradient) coordinate point in feet. | | Double | AF |
| D | elevationUOM | The unit of measure for elevation dimension. | foot | String (25) | AF |

Data Layer Specification – Historic River Alignment

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|---|--------------------|----------|
| | alignmentYear | The year(s) the alignment was active (e.g. 1850 - 1920, or pre-1942 - 1986). | | String (40) | SDSFIE |
| | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| D | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |

Data Layer Specification – Historic River Alignment

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| D | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |

Data Layer Specification – Historic River Alignment

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| D | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| D | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute

Data Layer Specification – Historic River Alignment

table and business table. Additional attributes to be determined by the Program Area Manager. The business table for HistoricRiverAlignment_L is:

| Table Name | Identifier | Source |
|---------------------------|------------------------|----------------------|
| nr_HistoricRiverAlignment | histRiverAlignmentIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Data Layer Specification – Land Cover

This Data Layer Specification (DLS) defines geospatial data specifications for the LandCover_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

The observed physical and biological cover of the land as vegetation or man-made features.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | LandCover_A |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalNaturalResources |
| Previous Layer Names: | flora_crown_closure_area ice_area land_cover_area LandCover |
| Geometry Type: | Polygon |
| Data Steward Organization (Program Area): | Program Area: Natural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Natural Resources Program SME |
| Representation: | <ul style="list-style-type: none">• Land Cover areas are represented as closed polygons depicting the outermost extent of the area.• Each individual land cover area is represented by a single area feature. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must not overlap. |
| Polygons must not have gaps. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: publicly available data from the Multi-Resolution Land Characteristics Consortium National Land Cover Database, planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the LandCover_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the LandCover_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|---|--------------------|----------|
| | landCoverIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Land Cover. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Land Cover that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |

Data Layer Specification – Land Cover

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|--|--------------------|----------|
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| D | landCoverType | The type of land cover. | For a list of domain values, see LandCoverType in Appendix 1. | String (20) | SDSFIE |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |

Data Layer Specification – Land Cover

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |

Data Layer Specification – Land Cover

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |

Data Layer Specification – Land Cover

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPEs geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for LandCover_A is:

| Table Name | Identifier | Source |
|--------------|---------------|----------------------|
| nr_LandCover | landCoverIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

Data Layer Specification – Land Cover

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Natural Resources, Land Cover

Data Layer Specification – Natural Resource Recreation Feature

This Data Layer Specification (DLS) defines geospatial data specifications for the NatResRecFeature_P data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

Recreation features managed by Natural Resources such as, but not limited to: hunting stands, fishing docks, trapping locations, fishing locations, wildlife observation points, etc.

Data Layer Details

Geometry/Topology

| Point Features: |
|--------------------------|
| Points must be disjoint. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the NatResRecFeature_P layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the NatResRecFeature_P data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|--|--------------------|----------|
| | natResRecFeatureIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Natural Resource Recreation Feature. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Natural Resource Recreation Feature that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |

Data Layer Specification – Natural Resource Recreation Feature

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------|---|---|--------------------|----------|
| | latitude | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | MGRS | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | recFeatureID | The locally assigned ID for the recreation feature. | | String (20) | AF |
| D | featureType | An enumeration indicating the primary recreational usage of the feature. | For a list of domain values, see NRrecFeatureType in Appendix 1. | String (20) | AF |
| | endDate | The date the feature or project was completed. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| | maintDate | The date the recreation feature was last serviced. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| | useLimits | Restrictions on the use of the feature. | | String (255) | AF |
| D | isADAaccessible | Identifies if the feature is handicapped accessible. | NA, no, TBD, yes | String (3) | AF |

Data Layer Specification – Natural Resource Recreation Feature

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|---|--------------------|----------|
| D | trapType | The type of trap used in the trapping area. | For a list of domain values, see TrapType in Appendix 1. | String (11) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |

Data Layer Specification – Natural Resource Recreation Feature

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |

Data Layer Specification – Natural Resource Recreation Feature

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute

Data Layer Specification – Natural Resource Recreation Feature

table and business table. Additional attributes to be determined by the Program Area Manager. The business table for NatResRecFeature_P is:

| Table Name | Identifier | Source |
|---------------------|----------------------|----------------------|
| nr_NatResRecFeature | NatResRecFeatureIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Data Layer Specification – Natural Resource Restoration Reclamation Project

This Data Layer Specification (DLS) defines geospatial data specifications for the NatResRestReclProj_A and NatResRestReclProj_P data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

A location where action has been taken (or is planned) to restore or reclaim degraded ecosystem structure, function, and dynamic process to a more natural condition or to enhance habitat for one or more species. Examples would be restoration of wetlands, river channels, native vegetation, and dunes or management of moist soil units for waterfowl.

| Representation: | <ul style="list-style-type: none"> • Restoration or reclamation locations are represented as closed polygons depicting the outermost extent of the area. • Each individual restoration or reclamation area is represented by a single area feature. • All points developed from areas shall represent the centroid of the natural resource restoration reclamation project area. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|--------------------------|--|
| HQ AF/A7CAN | <ul style="list-style-type: none"> • AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007 • AFI32-7062, Comprehensive Planning, 27 June 2013 • AFI32-7064, Integrated Natural Resources Management, 18 November 2014 • AFI32-7065, Cultural Resources Management Program, 19 November 2014 • AFH32-9007, Managing Air Force Real Property, 1 May 1999 • AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 • EO 13195, Trails for America in the 21st Century |

Geometry/Topology

| |
|--|
| Polygon Features: |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |
| Point Features: |
| If a point represents a polygon feature, then the point must fall properly inside of the coinciding polygon. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **6 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the NatResRestReclProj_A and NatResRestReclProj_P layers will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for NatResRestReclProj_A and NatResRestReclProj_P data layers.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------------|--|----------------|--------------------|----------|
| | natResRestReclProjIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |

Data Layer Specification – Natural Resource Restoration Reclamation Project

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|---|---|--------------------|----------|
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Natural Resource Restoration Reclamation Project. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Natural Resource Restoration Reclamation Project that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize <i>(Polygon geometry)</i> | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | |
| D | areaSizeUOM <i>(Polygon geometry)</i> | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize <i>(Polygon geometry)</i> | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM <i>(Polygon geometry)</i> | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude <i>(Polygon geometry)</i> | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude <i>(Polygon geometry)</i> | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |

Data Layer Specification – Natural Resource Restoration Reclamation Project

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|--|--------------------|----------|
| | MGRScentroid <i>(Polygon geometry)</i> | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | latitude <i>(Point geometry)</i> | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude <i>(Point geometry)</i> | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | MGRS <i>(Point geometry)</i> | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation <i>(Point geometry)</i> | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM <i>(Point geometry)</i> | The unit of measure for elevation dimension. | foot | String (25) | AF |
| D | recResProjectType | A code indicating the purpose of the project. | For a list of domain values, see RecResProjectType in Appendix 1. | String (24) | SDSFIE |
| | commonName | The common name of the species. | | String (255) | AF |
| | scientificName | The scientific name of the species. | | String (255) | SDSFIE |
| | startDate | The date the restoration or reclamation project was started. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |

Data Layer Specification – Natural Resource Restoration Reclamation Project

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| | endDate | The date the feature or project was completed. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |

Data Layer Specification – Natural Resource Restoration Reclamation Project

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |

Data Layer Specification – Natural Resource Restoration Reclamation Project

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |

Data Layer Specification – Natural Resource Restoration Reclamation Project

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------------------------|-----------------------|----------------|--------------------|----------|
| | SHAPE_Length (Polygon geometry) | ESRI-generated field. | | | ESRI |
| | SHAPE_Area (Polygon geometry) | ESRI-generated field. | | | ESRI |

Business Tables

The business tables will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business tables for NatResRestReclProj_A and NatResRestReclProj_P are:

| Table Name | Identifier | Source |
|-------------------------|------------------------|----------------------|
| nr_NatResRestReclProj_A | natResRestReclProjIDFK | Program Area Manager |
| nr_NatResRestReclProj_P | natResRestReclProjIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Natural Resources, Natural Resource Restoration Reclamation Project

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: RecResProjectType | |
|--------------------------------------|---|
| ATTRIBUTE NAME: recResProjectType | |
| CODED DOMAIN | DEFINITION |
| enhancement | Enhancement. |
| erosionControl | Erosion Control. |
| maintenance | Maintenance. |
| mitigation | Mitigation. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| protectionOrPreservation | The purpose of the project is protection or preservation of the project area. |
| reforestation | Reforestation. |
| remediation | Remediation. |
| restoration | Restoration. |
| specificSpeciesHabitat | Specific Species Habitat. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

Data Layer Specification – Natural Resource Survey

This Data Layer Specification (DLS) defines geospatial data specifications for the NatResSurvey_A, NatResSurvey_L, and NatResSurvey_P data layers implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

A location where a natural resources study, evaluation, assessment, survey or sample has taken place. Natural resource surveys, such as soil surveys, that are represented in other data layers should not be included here.

Data Layer Details

| | |
|--|--|

| | |
|------------------------|--|
| Representation: | <ul style="list-style-type: none"> • All survey locations shall represent the latitude, longitude location of an identified survey or sample location. • Survey or sample areas are represented as closed polygons depicting the outermost extent of the survey area. • Each individual survey or sample area is represented by a single area feature. • Surveys will be represented as a continuous unbroken line. • All points developed from areas shall represent the centroid of the natural resource survey area. |
|------------------------|--|

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|--------------------------|--|
| HQ AF/A7CAN | <ul style="list-style-type: none"> • AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007 • AFI32-7062, Comprehensive Planning, 27 June 2013 • AFI32-7064, Integrated Natural Resources Management, 18 November 2014 • AFI32-7065, Cultural Resources Management Program, 19 November 2014 • AFH32-9007, Managing Air Force Real Property, 1 May 1999 • AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 • 40 CFR 1500; 50 CFR 402.01(a), 402.10, and 402.12 Endangered/Threatened Species compliance requirements • 2011 Arbor Plan |

Geometry/Topology

| |
|--|
| Polygon Features: |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |
| Line Features: |
| Lines must be single part features. |
| Lines must be larger than cluster tolerance (.001 meter). |
| Point Features: |
| If a point represents a polygon feature, then the point must fall properly inside of the coinciding polygon. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the NatResSurvey_A, NatResSurvey_L, and NatResSurvey_P layers will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the NatResSurvey_A, NatResSurvey_L, and NatResSurvey_P data layers.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--|--|--|--------------------|----------|
| | natResSurveyIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Natural Resource Survey. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Natural Resource Survey that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize (Polygon geometry) | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM (Polygon geometry) | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize (Polygon geometry) | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM (Polygon geometry) | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude (Polygon geometry) | The latitude coordinate representing the feature in decimal degrees. | decimal degrees | Double | AF |

Data Layer Specification – Natural Resource Survey

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|-----------------------------------|--------------------|----------|
| | longitude <i>(Polygon geometry)</i> | The longitude coordinate representing the feature in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid <i>(Polygon geometry)</i> | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | lengthSize <i>(Line geometry)</i> | The value of the measured length. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | lengthSizeUOM <i>(Line geometry)</i> | The unit of measure for the calculated length. | foot | String (25) | AF |
| | latitudeFrom <i>(Line geometry)</i> | The latitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | latitudeTo <i>(Line geometry)</i> | The latitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeFrom <i>(Line geometry)</i> | The longitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |

Data Layer Specification – Natural Resource Survey

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|---|-----------------|--------------------|----------|
| | longitudeTo <i>(Line geometry)</i> | The longitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | elevationFrom <i>(Line geometry)</i> | The elevation component of the beginning (upstream/upgradient) coordinate point in feet. | | Double | AF |
| | elevationTo <i>(Line geometry)</i> | The elevation component of the ending (downstream/down gradient) coordinate point in feet. | | Double | AF |
| D | elevationUOM <i>(Line geometry)</i> | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | latitude <i>(Point geometry)</i> | The latitude coordinate representing the feature in decimal degrees. | decimal degrees | Double | AF |
| | longitude <i>(Point geometry)</i> | The longitude coordinate representing the feature in decimal degrees. | decimal degrees | Double | AF |
| | MGRS <i>(Point geometry)</i> | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation <i>(Point geometry)</i> | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM <i>(Point geometry)</i> | The unit of measure for elevation dimension. | foot | String (25) | AF |

Data Layer Specification – Natural Resource Survey

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-------------------|---|----------------|--------------------|----------|
| | dataFK | A unique identifier that contains the foreign key into the (possibly external) data table named in the dataTable_name attribute. | | String (38) | SDSFIE |
| | dataTable_name | The name of a table in a (possibly external) database containing data records related to this survey or sample. | | String (38) | SDSFIE |
| | projectName | The locally assigned project name. | | String (100) | AF |
| | surveyDateStart | The date the natural resource survey started. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| | surveyDateEnd | The date the natural resource survey ended. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| | survOrSampMeth | A description of the survey or sample method used. | | String (255) | SDSFIE |
| | survOrSampPurpose | A discriminator that indicates the purpose of survey or sample. This should include common key words such as Threatened, Endangered, Candidate, Rare, Sensitive, small mammal, neotropical songbird, etc. | | String (255) | SDSFIE |

Data Layer Specification – Natural Resource Survey

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|---|--|--------------------|----------|
| | surveyNum | Unique number assigned to the sample or plot by an installation for their own use. | | String (20) | AF |
| | commonName | The common name of the species. | | String (255) | AF |
| | scientificName | The scientific name of the species. | | String (255) | AF |
| D | speciesCat | The code indicating the class of flora or fauna. | For a list of domain values, see SpeciesCat in Appendix 1. | String (15) | AF |
| | collector | The entity accomplishing the survey. | | String (40) | AF |
| | reportName | The name of the report produced as a result of the survey. | | String (255) | AF |
| | reportDate | The date the report was published. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| | authAgency | Contact information for the entity that initiated the survey. | | String (255) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |

Data Layer Specification – Natural Resource Survey

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |

Data Layer Specification – Natural Resource Survey

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |

Data Layer Specification – Natural Resource Survey

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--|---|----------------|--------------------|----------|
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length (<i>Polygon and Line geometry</i>) | ESRI-generated field. | | | ESRI |
| | SHAPE_Area (<i>Polygon geometry</i>) | ESRI-generated field. | | | ESRI |

Business Tables

The business tables will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business tables for NatResSurvey_A, NatResSurvey_L, and NatResSurvey_P are:

| Table Name | Identifier | Source |
|-------------------|------------------|----------------------|
| nr_NatResSurvey_A | natResSurveyIDFK | Program Area Manager |
| nr_NatResSurvey_L | natResSurveyIDFK | Program Area Manager |
| nr_NatResSurvey_P | natResSurveyIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

Data Layer Specification – Natural Resource Survey

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Data Layer Specification – Noxious or Invasive Species

This Data Layer Specification (DLS) defines geospatial data specifications for the NoxiousOrInvasiveSpecies_A, NoxiousOrInvasiveSpecies_L, and NoxiousOrInvasiveSpecies_P data layers implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

Locations where noxious or invasive species are present, either currently or historically.

Data Layer Details

| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |
| Line Features: |
| Lines must be single part features. |
| Lines must be larger than cluster tolerance (.001 meter). |
| Point Features: |
| If a point represents a polygon feature, then the point must fall properly inside of the coinciding polygon. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the NoxiousOrInvasiveSpecies_A, NoxiousOrInvasiveSpecies_L, and NoxiousOrInvasiveSpecies_P layers will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the NoxiousOrInvasiveSpecies_A, NoxiousOrInvasiveSpecies_L, and NoxiousOrInvasiveSpecies_P data layers.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---------------------------|--|----------------|--------------------|----------|
| | noxiousOrInvasiveSpecIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |

Data Layer Specification – Noxious or Invasive Species

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|--|--------------------|----------|
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used for the noxious or invasive species. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the noxious or invasive species that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize (<i>Polygon geometry</i>) | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM (<i>Polygon geometry</i>) | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize (<i>Polygon geometry</i>) | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM (<i>Polygon geometry</i>) | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude (<i>Polygon geometry</i>) | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude (<i>Polygon geometry</i>) | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid (<i>Polygon geometry</i>) | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | lengthSize (<i>Line geometry</i>) | The value of the measured length. | Recorded to the 1/1000 of a foot. | Double | AF |

Data Layer Specification – Noxious or Invasive Species

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|-----------------|--------------------|----------|
| D | lengthSizeUOM <i>(Line geometry)</i> | The unit of measure for the calculated length. | foot | String (25) | AF |
| | latitudeFrom <i>(Line geometry)</i> | The latitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | latitudeTo <i>(Line geometry)</i> | The latitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeFrom <i>(Line geometry)</i> | The longitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeTo <i>(Line geometry)</i> | The longitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | elevationFrom <i>(Line geometry)</i> | The elevation component of the beginning (upstream/upgradient) coordinate point in feet. | | Double | AF |
| | elevationTo <i>(Line geometry)</i> | The elevation component of the ending (downstream/down gradient) coordinate point in feet. | | Double | AF |

Data Layer Specification – Noxious or Invasive Species

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------------------------|--|--|--------------------|----------|
| D | elevationUOM (Line geometry) | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | latitude (Point geometry) | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude (Point geometry) | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | MGRS (Point geometry) | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation (Point geometry) | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM (Point geometry) | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | commonName | The common name of the species. | | String (255) | AF |
| | scientificName | The scientific name of the species. | | String (255) | SDSFIE |
| D | kingdom | A descriptor identifying one of the five taxonomic kingdoms into which scientists place all living organisms. | For a list of domain values, see KingdomType in Appendix 1. | String (10) | SDSFIE |
| D | speciesCat | The code indicating the class of flora or fauna. | For a list of domain values, see SpeciesCat in Appendix 1. | String (15) | AF |
| | natureServeID | The unique identifier for the NatureServe record of the species (http://www.natureserve.org). | | String (10) | SDSFIE |

Data Layer Specification – Noxious or Invasive Species

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|--|--------------------|----------|
| D | isNative | The species is a native species. If false, the assumption is that the species is exotic. | NA, no, TBD, yes | String (3) | SDSFIE |
| D | isNoxious | Indicates whether the species is designated noxious. | NA, no, TBD, yes | String (3) | AF |
| D | isInvasive | Indicates whether the species is considered invasive. | NA, no, TBD, yes | String (3) | AF |
| D | isManagedSpecies | Indicates whether the species is under active management. | NA, no, TBD, yes | String (3) | AF |
| D | mgtAction | The management action, if any, being taken to control the species. | For a list of domain values, see MgtAction in Appendix 1. | String (20) | AF |
| | controlDate | The date management action was taken. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| | pesticide1 | The trade name of the primary pesticide applied. | | String (100) | AF |
| | pesticide1LBS | The total pounds of active ingredient of pesticide 1 applied. | | Double | AF |
| | pesticide2 | The trade name of the secondary pesticide applied. | | String (100) | AF |
| | pesticide2LBS | The total pounds of active ingredient of pesticide 2 applied. | | Double | AF |
| | pesticide3 | The trade name of the tertiary pesticide applied. | | String (100) | AF |
| | pesticide3LBS | The total pounds of active ingredient of pesticide 3 applied. | | Double | AF |
| | popCover | The population count at the site. | | Integer (Long) | AF |

Data Layer Specification – Noxious or Invasive Species

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| | percentCover | The percent cover of the species at the site. | | String (50) | AF |
| | countCoverDate | The date on which the population count or percent cover measurement was made. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |

Data Layer Specification – Noxious or Invasive Species

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |

Data Layer Specification – Noxious or Invasive Species

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |

Data Layer Specification – Noxious or Invasive Species

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|-----------------------|----------------|--------------------|----------|
| | SHAPE_Length (Polygon and Line geometry) | ESRI-generated field. | | | ESRI |
| | SHAPE_Area (Polygon geometry) | ESRI-generated field. | | | ESRI |

Business Tables

The business tables will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business tables for NoxiousOrInvasiveSpecies_A, NoxiousOrInvasiveSpecies_L, and NoxiousOrInvasiveSpecies_P are:

| Table Name | Identifier | Source |
|-------------------------------|---------------------------|----------------------|
| nr_NoxiousOrInvasiveSpecies_A | noxiousOrInvasiveSpecIDFK | Program Area Manager |
| nr_NoxiousOrInvasiveSpecies_L | noxiousOrInvasiveSpecIDFK | Program Area Manager |
| nr_NoxiousOrInvasiveSpecies_P | noxiousOrInvasiveSpecIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Data Layer Specification – Noxious or Invasive Species

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Natural Resources, Noxious or Invasive Species

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: KingdomType | |
|--------------------------------|---|
| ATTRIBUTE NAME: kingdom | |
| CODED DOMAIN | DEFINITION |
| animalia | Animals are a major group of multicellular, eukaryotic organisms of the kingdom Animalia. |
| fungi | A fungus is a eukaryotic organism that is a member of the kingdom Fungi. |
| monera | Monera are bacteria and other mostly tiny, single-celled organisms whose genetic material is loose in the cell. Once Monera were briefly understood to be one of five biological kingdoms. Now it comprises two kingdoms: Eubacteria and Archaeobacteria. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| plantae | Plants are a major group of multicellular, eukaryotic organisms of the kingdom Plantae. |
| protista | Protists are unicellular eukaryotes that either exist as independent cells, or if they occur in colonies, do not show differentiation into tissues and are members of the kingdom Protista. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: MgtAction | |
|------------------------------|---|
| ATTRIBUTE NAME: mgtAction | |
| CODED DOMAIN | DEFINITION |
| aerialSpraying | Action taken to manage the species is aerial spraying. |
| biological | Action taken to manage the species is biological control. |
| broadcastSpraying | Action taken to manage the species is broadcast spraying. |
| burning | Action taken to manage the species is prescribed burning. |
| cutStump | Action taken to manage the species is cut stump treatment. |
| electrofishing | Action taken to manage the species is electro-fishing. |
| fumigation | Action taken to manage the species is fumigation. |
| gillnetting | Action taken to manage the species is gillnetting. |
| manual | Action taken to manage the species is manual removal. |
| mechanical | Action taken to manage the species is mechanical control. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| pesticide | Action taken to manage the species is general pesticide application. |
| poisonBait | Action taken to manage the species is use of poison bait. |
| spotSpraying | Action taken to manage the species is spot spraying. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| trapping | Action taken to manage the species is trapping. |

| DOMAIN TABLE NAME: SpeciesCat | |
|-------------------------------|--|
| ATTRIBUTE NAME: speciesCat | |
| CODED DOMAIN | DEFINITION |
| amphibia | Amphibian species. |
| aves | Avian (Birds) species. |
| bryoid | Bryoid species. |
| crustacea | Crustacean species. |
| epiphyte | Epiphyte species. |
| general | An aggregate of more than one species. |

Data Layer Specification – Noxious or Invasive Species

| DOMAIN TABLE NAME: SpeciesCat | |
|-------------------------------|---|
| ATTRIBUTE NAME: speciesCat | |
| herb | Herb species. |
| insecta | Insect species. |
| liana | Liana species. |
| mammalia | Mammal species. |
| mollusca | Mollusk species. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| pisces | Pisces (Fish) species. |
| reptilia | Reptile species. |
| shrub | Shrub species. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| thallophyte | Thallophyte species. |
| tree | Tree species. |

Data Layer Specification – Prescribed Burn Unit

This Data Layer Specification (DLS) defines geospatial data specifications for the PrescribedBurnUnit_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

Designated prescribed burn units, also often referred to as burn 'blocks'. Burn units represent areas where fire managers expect to use prescribed fire. In some cases, much or all of an installation may be divided into burn units.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | PrescribedBurnUnit_A |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must not overlap. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **12 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the PrescribedBurnUnit_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the PrescribedBurnUnit_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------------|--|---|--------------------|----------|
| | prescribedBurnUnitIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Prescribed Burn Unit. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Prescribed Burn Unit that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |

Data Layer Specification – Prescribed Burn Unit

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|--|--------------------|----------|
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | burnUnitID | Name or identifier of the burn unit. | | String (10) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |

Data Layer Specification – Prescribed Burn Unit

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard . | String (5) | AF |

Data Layer Specification – Prescribed Burn Unit

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |

Data Layer Specification – Prescribed Burn Unit

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPEs geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for PrescribedBurnUnit_A is:

| Table Name | Identifier | Source |
|-----------------------|------------------------|----------------------|
| nr_PrescribedBurnUnit | prescribedBurnUnitIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

Data Layer Specification – Prescribed Burn Unit

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Data Layer Specification – Recreation Nature Trail

This Data Layer Specification (DLS) defines geospatial data specifications for the RecNatureTrail_L data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

All nature trails managed by Natural Resources. This layer does not include other trails used for recreational purposes, such as, running/walking or biking trails.

Data Layer Details

Geometry/Topology

| |
|---|
| Line Features: |
| Lines must not overlap. |
| Lines must not intersect. |
| Lines must not self-overlap. |
| Lines must not self-intersect. |
| Lines must be single part features. |
| Lines must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the RecNatureTrail_L layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the RecNatureTrail_L data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|--|--------------------|----------|
| | recNatureTrailIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Recreation Nature Trail. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Recreation Nature Trail that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | lengthSize | The value of the measured length. | Recorded to the 1/1000 of a foot. | Double | AF |

Data Layer Specification – Recreation Nature Trail

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|-----------------|--------------------|----------|
| D | lengthSizeUOM | The unit of measure for the calculated length. | foot | String (25) | AF |
| | latitudeFrom | The latitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | latitudeTo | The latitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeFrom | The longitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeTo | The longitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | elevationFrom | The elevation component of the beginning (upstream/upgradient) coordinate point in feet. | | Double | AF |
| | elevationTo | The elevation component of the ending (downstream/down gradient) coordinate point in feet. | | Double | AF |

Data Layer Specification – Recreation Nature Trail

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | elevationUOM | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | trailID | Local identifier for recreation trail. | | String (20) | AF |
| | useLimits | Restrictions on the use of the feature. | | String (255) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |

Data Layer Specification – Recreation Nature Trail

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |

Data Layer Specification – Recreation Nature Trail

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|-----------------------|----------------|--------------------|----------|
| | SHAPE_Length | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for RecNatureTrail_L is:

| Table Name | Identifier | Source |
|--------------------------|--------------------|----------------------|
| nr_RecreationNatureTrail | RecNatureTrailIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Data Layer Specification – Soil Survey Area

This Data Layer Specification (DLS) defines geospatial data specifications for the SoilSurveyArea_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

An overall soil survey which consists of one to many soil map unit areas. The projected uses of the survey and the complexity of the soil patterns largely determine the scale of the soil map.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | SoilSurveyArea_A |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalNaturalResources |
| Previous Layer Names: | soil_map_unit_area soil_survey_area NaturalResourceSurvey |
| Geometry Type: | Polygon |
| Data Steward Organization (Program Area): | Program Area: Natural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Natural Resources Program SME |
| Representation: | <ul style="list-style-type: none">• Soil survey areas are represented as closed polygons depicting the outermost extent of the survey area or soil type.• Each individual survey area or soil type is represented by a single area feature. |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must not overlap |
| Polygons must not have gaps. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: publicly available data from the Natural Resources Conservation Service Web Soil Survey, planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Since there are no definitive boundaries for this layer, a horizontal positional accuracy threshold is not applicable. However, if the data was acquired from an outside agency, the accuracy threshold/report of the originating agency is acceptable.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the "Quality" element of the metadata. Where positional accuracy cannot be determined, this section should be populated with "Not Recorded" and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the SoilSurveyArea_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the SoilSurveyArea_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|---|--------------------|----------|
| | soilSurveyIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Soil Survey Area. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Soil Survey Area that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |

Data Layer Specification – Soil Survey Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|-----------------------------------|--------------------|----------|
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | surveyDate | The date the survey was conducted. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | SDSFIE |
| | mapUnitName | The name for a specific soil map unit obtained from the NRCS Soil Survey Geographic (SSURGO) database. | | String (175) | AF |

Data Layer Specification – Soil Survey Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | mapUnitKey | The unique identifier for a specific soil map unit obtained from the NRCS Soil Survey Geographic (SSURGO) database. Can be used to link to the tables in the SSURGO database. | | String (30) | AF |
| | mapUnitSym | The symbol for a specific soil map unit obtained from the NRCS Soil Survey Geographic (SSURGO) database. Can be used to link to the tables in the SSURGO database. | | String (6) | AF |
| | surveyAreaName | The name for the soil survey area obtained from the NRCS Soil Survey Geographic (SSURGO) database. | | String (135) | AF |
| | surveyAreaSym | The symbol for the soil survey area obtained from the NRCS Soil Survey Geographic (SSURGO) database. | | String (20) | AF |
| | soilSurveyNum | A five character identification number for the soil survey area. Created by combining the numeric state code and the soil survey area symbol. Example: 08617. | | String (5) | AF |
| | fips | FIPS alpha code for the state. Example: AR, CO, etc. | | String (2) | AF |

Data Layer Specification – Soil Survey Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|--|--------------------|----------|
| | editDate | The edit date the soil survey area was certified by the state soil scientist and made available for public use. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| | editStatus | The status of editing or certification level for the soil survey. | | String (50) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |

Data Layer Specification – Soil Survey Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |

Data Layer Specification – Soil Survey Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for SoilSurveyArea_A is:

| Table Name | Identifier | Source |
|-------------------|----------------|----------------------|
| nr_SoilSurveyArea | soilSurveyIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

Data Layer Specification – Soil Survey Area

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Data Layer Specification – Special Management Area

This Data Layer Specification (DLS) defines geospatial data specifications for the SpecialMgtArea_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

An area where a unique natural feature occurs and where special management actions have been taken in order to protect and preserve the resource. This may include, but is not limited to: wild and scenic rivers, unique or rare ecosystems such as the Post Oak Savannah ecosystem, or geologic features such as Mima Mounds and.

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **12 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the SpecialMgtArea_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the SpecialMgtArea_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|--|--------------------|----------|
| | specialMgtAreaIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Special Management Area. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Special Management Area that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |

Data Layer Specification – Special Management Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|--|--------------------|----------|
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | managedResource | The feature or resource being protected or managed. | | String (125) | AF |
| | dateDesig | Date the area was designated. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| D | mgtLevel | Discriminator. The level of management for the area. | For a list of domain values, see GovMgt in Appendix 1. | String (10) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |

Data Layer Specification – Special Management Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |

Data Layer Specification – Special Management Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |

Data Layer Specification – Special Management Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for SpecialMgtArea_A is:

| Table Name | Identifier | Source |
|-------------------|--------------------|----------------------|
| nr_SpecialMgtArea | specialMgtAreaIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Data Layer Specification – Special Status Species

This Data Layer Specification (DLS) defines geospatial data specifications for the SpecialStatusSpecies_A, SpecialStatusSpecies_L, and SpecialStatusSpecies_P data layers implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

Indicates existence of a special status species by the geographically described geometry either currently, historically, or the species is being recruited into the area. Only those species that have a legal designation under the federal Endangered Species Act or a state analog should be included.

| Line Features: |
| Lines must be single part features. |
| Lines must be larger than cluster tolerance (.001 meter). |
| Point Features: |
| If a point represents a polygon feature, then the point must fall properly inside of the coinciding polygon. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the SpecialStatusSpecies_A, SpecialStatusSpecies_L, and SpecialStatusSpecies_P layers will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the SpecialStatusSpecies_A, SpecialStatusSpecies_L, and SpecialStatusSpecies_P data layers.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------------------|--|----------------|--------------------|----------|
| | specialStatusSpeciesID PK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |

Data Layer Specification – Special Status Species

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|---|--------------------|----------|
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used for the special status species. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the special status species that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize (<i>Polygon geometry</i>) | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM (<i>Polygon geometry</i>) | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize (<i>Polygon geometry</i>) | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM (<i>Polygon geometry</i>) | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude (<i>Polygon geometry</i>) | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude (<i>Polygon geometry</i>) | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid (<i>Polygon geometry</i>) | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | lengthSize (<i>Line geometry</i>) | The value of the measured length. | Recorded to the 1/1000 of a foot. | Double | AF |

Data Layer Specification – Special Status Species

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|-----------------|--------------------|----------|
| D | lengthSizeUOM <i>(Line geometry)</i> | The unit of measure for the calculated length. | foot | String (25) | AF |
| | latitudeFrom <i>(Line geometry)</i> | The latitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | latitudeTo <i>(Line geometry)</i> | The latitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeFrom <i>(Line geometry)</i> | The longitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeTo <i>(Line geometry)</i> | The longitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | elevationFrom <i>(Line geometry)</i> | The elevation component of the beginning (upstream/upgradient) coordinate point in feet. | | Double | AF |
| | elevationTo <i>(Line geometry)</i> | The elevation component of the ending (downstream/down gradient) coordinate point in feet. | | Double | AF |

Data Layer Specification – Special Status Species

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|---|---|--------------------|----------|
| D | elevationUOM <i>(Line geometry)</i> | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | latitude <i>(Point geometry)</i> | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude <i>(Point geometry)</i> | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | MGRS <i>(Point geometry)</i> | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation <i>(Point geometry)</i> | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM <i>(Point geometry)</i> | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | commonName | The common name of the species. | | String (255) | AF |
| | scientificName | The scientific name of the species. | | String (255) | SDSFIE |
| D | kingdom | A descriptor identifying one of the five taxonomic kingdoms into which scientists place all living organisms. | For a list of domain values, see KingdomType in Appendix 1. | String (10) | SDSFIE |
| D | speciesCat | The code indicating the class of flora or fauna. | For a list of domain values, see SpeciesCat in Appendix 1. | String (15) | AF |
| D | activityStatus | The category of activity status for the species. | For a list of domain values, see ActivityStatusType in Appendix 1. | String (15) | SDSFIE |

Data Layer Specification – Special Status Species

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-------------------|---|--|--------------------|----------|
| D | isFedListed | The species special status is based on a notice published in the Federal Register per the US Endangered Species Act. | NA, no, TBD, yes | String (3) | SDSFIE |
| D | isStateProtected | Indicates whether the species is protected by the state. | NA, no, TBD, yes | String (3) | AF |
| D | iucnRedListed | The species is listed on the International Union for Conservation of Nature (IUCN) Red List. | NA, no, TBD, yes | String (3) | SDSFIE |
| | natureServeID | The unique identifier for the NatureServe record of the species (http://www.natureserve.org). | Examples: "2.453627" or "2.102013". | String (10) | SDSFIE |
| | natureServeStatus | The NatureServe conservation status code. | | String (20) | AF |
| D | otherSpecStatus | The category of the other special status for the species. | For a list of domain values, see OtherSpecStatus in Appendix 1. | String (24) | SDSFIE |
| | otherStatusValue | A string value that is constructed per species as defined by appropriate otherSpecStatus. See http://www.natureserve.org/explorer/statusus.htm for more details. | | String (30) | SDSFIE |
| D | specStatusCat | The category of the special status of the species. | For a list of domain values, see SpecStatusCat in Appendix 1. | String (30) | SDSFIE |

Data Layer Specification – Special Status Species

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|---|--|--------------------|----------|
| | dateListed | The date on which the current designation of the species as special was made. Format for date is YYYYMMDD (i.e. September 15, 1994 = 19940915). | | Integer (Long) | AF |
| | nestNum | Number of nests observed. | | Integer (Long) | AF |
| | hibernaculaNum | The number of hibernacula (hibernation locations). | | Integer (Long) | AF |
| | popCount | The population count at the site. | | Integer (Long) | AF |
| | popDate | The date on which the population count was made. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915) | | Integer (Long) | AF |
| D | speciesPop | Identify if the species population is: increasing, decreasing or stable. | For a list of domain values, see SpeciesPopulation in Appendix 1. | String (11) | AF |
| | bufferWidth | The width, in feet, of any associated buffer. | | Double | AF |
| D | widthUOM | The unit of measure for the width dimension. | foot | String (25) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |

Data Layer Specification – Special Status Species

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard . | String (5) | AF |

Data Layer Specification – Special Status Species

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |

Data Layer Specification – Special Status Species

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--|---|----------------|--------------------|----------|
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length (<i>Polygon and Line geometry</i>) | ESRI-generated field. | | | ESRI |
| | SHAPE_Area (<i>Polygon geometry</i>) | ESRI-generated field. | | | ESRI |

Business Tables

The business tables will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business tables for SpecialStatusSpecies_A, SpecialStatusSpecies_L, and SpecialStatusSpecies_P are:

| Table Name | Identifier | Source |
|---------------------------|--------------------------|----------------------|
| nr_SpecialStatusSpecies_A | specialStatusSpeciesIDFK | Program Area Manager |
| nr_SpecialStatusSpecies_L | specialStatusSpeciesIDFK | Program Area Manager |
| nr_SpecialStatusSpecies_P | specialStatusSpeciesIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Natural Resources, Special Status Species

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: ActivityStatusType | |
|---------------------------------------|---|
| ATTRIBUTE NAME: activityStatus | |
| CODED DOMAIN | DEFINITION |
| active | The species is active in the indicated range. |
| inactive | The species was historically active in the indicated range but is known to no longer be active. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| recruitment | Species activity is being recruited into the indicated range. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: KingdomType | |
|--------------------------------|---|
| ATTRIBUTE NAME: kingdom | |
| CODED DOMAIN | DEFINITION |
| animalia | Animals are a major group of multicellular, eukaryotic organisms of the kingdom Animalia. |
| fungi | A fungus is a eukaryotic organism that is a member of the kingdom Fungi. |
| monera | Monera are bacteria and other mostly tiny, single-celled organisms whose genetic material is loose in the cell. Once Monera were briefly understood to be one of five biological kingdoms. Now it comprises two kingdoms: Eubacteria and Archaeobacteria. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| plantae | Plants are a major group of multicellular, eukaryotic organisms of the kingdom Plantae. |
| protista | Protista are unicellular eukaryotes that either exist as independent cells, or if they occur in colonies, do not show differentiation into tissues and are members of the kingdom Protista. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: OtherSpecStatus | |
|------------------------------------|---|
| ATTRIBUTE NAME: otherSpecStatus | |
| CODED DOMAIN | DEFINITION |
| combinationFlaggedValues | The taxon has no U.S. ESA status and is not named in the Federal Register; however, each infraspecific taxa have official status but at least two taxa are in a different status. Show a combination of the statuses with a flag. Example (value, value). |
| combinationValues | The taxon has one status currently, but a more recent proposal has been made to change that status with no final action yet published. For example, LE, PDL indicates that the species is currently listed as endangered, but has been proposed for delisting. |
| flaggedValues | The taxon itself is not named in the Federal Register as having U.S. ESA status; however, it does have U.S. ESA status as a result of its taxonomic relationship to a named entity. For example, if a species is federally listed as endangered, then by default, all of its recognized subspecies also have endangered status. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| partialStatus | Indicates partial status, status in only a portion of the species range. Typically indicated in a full species record where at least one but not all of a species infraspecific taxa or populations has U.S. ESA status. Value pattern example (PS). |

Data Layer Specification – Special Status Species

| DOMAIN TABLE NAME: OtherSpecStatus | |
|------------------------------------|--|
| ATTRIBUTE NAME: otherSpecStatus | |
| partialStatusValues | Indicates partial status, status in only a portion of the species range. The value of that status appears because the listed entity (usually a population defined by geopolitical boundaries or defined administratively, such as experimental populations) does not have an individual entry in NatureServe Explorer. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: SpeciesCat | |
|-------------------------------|---|
| ATTRIBUTE NAME: speciesCat | |
| CODED DOMAIN | DEFINITION |
| amphibia | Amphibian species. |
| aves | Avian (Birds) species. |
| bryoid | Bryoid species. |
| crustacea | Crustacean species. |
| epiphyte | Epiphyte species. |
| general | An aggregate of more than one species. |
| herb | Herb species. |
| insecta | Insect species. |
| liana | Liana species. |
| mammalia | Mammal species. |
| mollusca | Mollusk species. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| pisces | Pisces (Fish) species. |
| reptilia | Reptile species. |
| shrub | Shrub species. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| thallophyte | Thallophyte species. |
| tree | Tree species. |

| DOMAIN TABLE NAME: SpeciesPopulation | |
|--------------------------------------|---|
| ATTRIBUTE NAME: speciesPop | |
| CODED DOMAIN | DEFINITION |
| decreasing | The species population is decreasing in numbers. |
| increasing | The species population is increasing in numbers. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| stable | The species population is stable. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: SpecStatusCat | |
|----------------------------------|------------------------------------|
| ATTRIBUTE NAME: specStatusCat | |
| CODED DOMAIN | DEFINITION |
| candidate | Candidate. |
| essentExperPop | Essential experimental population. |
| listedEndangered | Listed endangered. |
| listedThreatened | Listed threatened. |
| NA | Not Applicable: No value exists. |

Data Layer Specification – Special Status Species

| DOMAIN TABLE NAME: SpecStatusCat | |
|----------------------------------|---|
| ATTRIBUTE NAME: specStatusCat | |
| nonessentExperPop | Nonessential experimental population. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| otherStatus | Some other status is designated in the otherSpecStatus and otherStatusValue attributes. |
| proposedEndangered | Proposed endangered. |
| proposedForDelisting | Proposed for delisting. |
| propSimilarOfAppearEndangered | Proposed endangered because of similarity of appearance. |
| propSimilarOfAppearThreatened | Proposed threatened because of similarity of appearance. |
| proposedThreatened | Proposed threatened. |
| similarOfAppearEndangered | Listed endangered because of similarity of appearance. |
| similarOfAppearThreatened | Listed threatened because of similarity of appearance. |
| specialConcern | Special concern. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

Data Layer Specification – Species Area, Species Line, and Species Point

This Data Layer Specification (DLS) defines geospatial data specifications for the SpeciesArea_A, SpeciesLine_L and SpeciesPoint_P data layers implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

The specific location where an individual species has been observed either currently, historically, or the species is being recruited to the area.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | SpeciesArea_A SpeciesLine_L SpeciesPoint_P |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalNaturalResources |
| Previous Layer Names: | ecology_species_area ecology_species_point fauna_species_area fauna_species_point flora_species_area flora_species_point SpeciesRange SpeciesRange_P |
| Geometry Type: | Polygon, Line, Point |
| Data Steward Organization (Program Area): | Program Area: Natural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Natural Resources Program SME |
| Representation: | <ul style="list-style-type: none"> • Species areas are represented as closed polygons depicting the outermost extent of the area. • Each individual species area is represented by a single area feature. • Species locations will be represented as a continuous unbroken line. • All points developed from areas shall represent the centroid of the species area. |

Implementing Authorities and Regulations

| | |
|---------------------------------|--|
| Implementing Program(s): | Driver(s): |
| HQ AF/A7CAN | <ul style="list-style-type: none"> • AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007 |

| Implementing Program(s): | Driver(s): |
|--------------------------|--|
| | <ul style="list-style-type: none"> • AFI32-7062, Comprehensive Planning, 27 June 2013 • AFI32-7064, Integrated Natural Resources Management, 18 November 2014 • AFI32-7065, Cultural Resources Management Program, 19 November 2014 • AFH32-9007, Managing Air Force Real Property, 1 May 1999 • AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 • Sikes Act of 1960 • 50 CFR 402.02 (Biological Assessment) • Fish and Wildlife Conservation Act of 1980 (PL 96-366) |

Geometry/Topology

| |
|--|
| Polygon Features: |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |
| Line Features: |
| Lines must be single part features. |
| Lines must be larger than cluster tolerance (.001 meter). |
| Point Features: |
| If a point represents a polygon feature, then the point must fall properly inside of the coinciding polygon. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Since there are no definitive boundaries for SpeciesArea_A, a horizontal positional accuracy threshold is not applicable. Likewise, point features in SpeciesPoint_P that represent polygon features in SpeciesArea_A will not have an associated horizontal positional accuracy. However, if the data was acquired from an outside agency, the accuracy threshold/report of the originating agency is acceptable.

Data developed within the SpeciesLine_L and SpeciesPoint_P layer (point features not subject to the stipulation above) should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the SpeciesArea_A, SpeciesLine_L and SpeciesPoint_P layers will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the SpeciesArea_A, SpeciesLine_L and SpeciesPoint_P data layers.

SDSFIE 3.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|--|--------------------|----------|
| | speciesIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used for the species. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the species that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize <i>(Polygon geometry)</i> | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM <i>(Polygon geometry)</i> | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize <i>(Polygon geometry)</i> | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM <i>(Polygon geometry)</i> | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude <i>(Polygon geometry)</i> | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |

Data Layer Specification – Species Area, Species Line, and Species Point

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|-----------------------------------|--------------------|----------|
| | longitude <i>(Polygon geometry)</i> | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid <i>(Polygon geometry)</i> | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | lengthSize <i>(Line geometry)</i> | The value of the measured length. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | lengthSizeUOM <i>(Line geometry)</i> | The unit of measure for the calculated length. | foot | String (25) | AF |
| | latitudeFrom <i>(Line geometry)</i> | The latitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | latitudeTo <i>(Line geometry)</i> | The latitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeFrom <i>(Line geometry)</i> | The longitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |

Data Layer Specification – Species Area, Species Line, and Species Point

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|---|-----------------|--------------------|----------|
| | longitudeTo <i>(Line geometry)</i> | The longitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | elevationFrom <i>(Line geometry)</i> | The elevation component of the beginning (upstream/upgradient) coordinate point in feet. | | Double | AF |
| | elevationTo <i>(Line geometry)</i> | The elevation component of the ending (downstream/down gradient) coordinate point in feet. | | Double | AF |
| D | elevationUOM <i>(Line geometry)</i> | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | latitude <i>(Point geometry)</i> | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude <i>(Point geometry)</i> | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | MGRS <i>(Point geometry)</i> | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation <i>(Point geometry)</i> | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM <i>(Point geometry)</i> | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | commonName | The common name of the species. | | String (255) | AF |

Data Layer Specification – Species Area, Species Line, and Species Point

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-------------------|--|---|--------------------|----------|
| | scientificName | The scientific name of the species. | | String (255) | SDSFIE |
| D | activityStatus | The category of activity status for the species. | For a list of domain values, see ActivityStatusType in Appendix 1. | String (15) | SDSFIE |
| D | isNative | The species is a native species. If false, the assumption is that the species is exotic. | NA, no, TBD, yes | String (3) | SDSFIE |
| D | kingdom | A descriptor identifying one of the five taxonomic kingdoms into which scientists place all living organisms. | For a list of domain values, see KingdomType in Appendix 1. | String (10) | SDSFIE |
| | natureServeID | The unique identifier for the NatureServe record of the species (http://www.natureserve.org). | Examples: "2.453627" or "2.102013". | String (10) | SDSFIE |
| | natureServeStatus | The NatureServe conservation status code. | | String (20) | AF |
| D | speciesCat | The code indicating the class of flora or fauna. | For a list of domain values, see SpeciesCat in Appendix 1. | String (15) | AF |
| | nestNum | Number of nests observed. | | Integer (Long) | AF |
| | hibernaculaNum | The number of hibernacula (hibernation locations). | | Integer (Long) | AF |
| | popCount | The population count at the site. | | Integer (Long) | AF |
| | popDate | The date on which the population count was made. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915) | | Integer (Long) | AF |

Data Layer Specification – Species Area, Species Line, and Species Point

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |

Data Layer Specification – Species Area, Species Line, and Species Point

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--|---|----------------|--------------------|----------|
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length (Polygon geometry and Line geometry) | ESRI-generated field. | | | ESRI |
| | SHAPE_Area (Polygon geometry) | ESRI-generated field. | | | ESRI |

Business Tables

The business tables will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business tables for SpeciesArea_A, SpeciesLine_L, and SpeciesPoint_P are:

| Table Name | Identifier | Source |
|-----------------------|-------------|-----------------------------|
| nr_SpeciesArea | speciesIDFK | Program Area Manager |
| nr_SpeciesLine | speciesIDFK | Program Area Manager |
| nr_SpeciesPoint | speciesIDFK | Program Area Manager |
| nr_UrbanTreeInventory | speciesIDFK | Urban Tree Inventory Survey |

Business Table Attributes for nr_UrbanTreeInventory

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|-----------------|--|------------------------------|--------------------|
| | speciesIDFK | The unique identifier for each urban tree feature. Used to link back to the SpeciesPoint_P attribute table. | | String (20) |
| | inventoryDate | The date the inventory was conducted. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | Urban Tree Inventory Survey | Integer (Long) |
| | treeCode | The alphanumeric code for the tree species, generally consisting of the first two letters of the genus followed by the first two letters of the species. | Urban Tree Inventory Survey | String (5) |
| | DBH | Diameter of the main or dominant stem of the tree measured at 4 ½ feet above ground level to the nearest inch. | Urban Tree Inventory Survey | Integer (Long) |
| D | dbhUOM | The unit of measure for dbh. | inch | String (25) |
| | stemNumber | The number of primary stems counted at 4 ½ feet above ground level. | Urban Tree Inventory Survey | Integer (Long) |
| | treeHeightClass | The estimated height of the tree. | Urban Tree Inventory Survey | String (15) |

Data Layer Specification – Species Area, Species Line, and Species Point

| Domain (D) | Attribute Name | Definition | Data Source / Allowed Values | Data Type (Length) |
|------------|----------------------|--|------------------------------|--------------------|
| | canopyRadiusClass | The estimated radius of the tree canopy from the stem to the canopy dripline. | Urban Tree Inventory Survey | String (15) |
| | treeConditionClass | The condition of the tree. | Urban Tree Inventory Survey | String (5) |
| | treeOwnerCode | The unique code for each tree that designates the office with responsibility for care and maintenance of the tree. | Urban Tree Inventory Survey | String (15) |
| | treeLocationType | The type of location where the tree is found. | Urban Tree Inventory Survey | String (20) |
| | treeLocationValue | The value of the tree relative to its location. | Urban Tree Inventory Survey | String (15) |
| | treeConflictType | The type of conflict the tree causes relative to other infrastructure, if any. | Urban Tree Inventory Survey | String (100) |
| | primMaintNeed | The primary maintenance need of the tree. | Urban Tree Inventory Survey | String (25) |
| | otherMaintNeed | Other maintenance requirements of the tree. | Urban Tree Inventory Survey | String (100) |
| | plantingSitePriority | The classification of a potential tree planting site. | Urban Tree Inventory Survey | String (10) |
| | treeNotes | Additional comments regarding the tree. | Urban Tree Inventory Survey | String (255) |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

Data Layer Specification – Species Area, Species Line, and Species Point

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Natural Resources, Species Area, Species Line, Species Point

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: ActivityStatusType | |
|---------------------------------------|---|
| ATTRIBUTE NAME: activityStatus | |
| CODED DOMAIN | DEFINITION |
| active | The species is active in the indicated range. |
| inactive | The species was historically active in the indicated range but is known to no longer be active. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| recruitment | Species activity is being recruited into the indicated range. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: KingdomType | |
|--------------------------------|---|
| ATTRIBUTE NAME: kingdom | |
| CODED DOMAIN | DEFINITION |
| animalia | Animals are a major group of multicellular, eukaryotic organisms of the kingdom Animalia. |
| fungi | A fungus is a eukaryotic organism that is a member of the kingdom Fungi. |
| monera | Monera are bacteria and other mostly tiny, single-celled organisms whose genetic material is loose in the cell. Once Monera were briefly understood to be one of five biological kingdoms. Now it comprises two kingdoms: Eubacteria and Archaeobacteria. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| plantae | Plants are a major group of multicellular, eukaryotic organisms of the kingdom Plantae. |
| protista | Protists are unicellular eukaryotes that either exist as independent cells, or if they occur in colonies, do not show differentiation into tissues and are members of the kingdom Protista. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: SpeciesCat | |
|-------------------------------|--|
| ATTRIBUTE NAME: speciesCat | |
| CODED DOMAIN | DEFINITION |
| amphibia | Amphibian species. |
| aves | Avian (Birds) species. |
| bryoid | Bryoid species. |
| crustacea | Crustacean species. |
| epiphyte | Epiphyte species. |
| general | An aggregate of more than one species. |
| herb | Herb species. |
| insecta | Insect species. |
| liana | Liana species. |
| mammalia | Mammal species. |
| mollusca | Mollusk species. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| pisces | Pisces (Fish) species. |
| reptilia | Reptile species. |
| shrub | Shrub species. |

Data Layer Specification – Species Area, Species Line, and Species Point

| | |
|-------------------------------|---|
| DOMAIN TABLE NAME: SpeciesCat | |
| ATTRIBUTE NAME: speciesCat | |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| thallophyte | Thallophyte species. |
| tree | Tree species. |

Data Layer Specification – Species Specific Habitat

This Data Layer Specification (DLS) defines geospatial data specifications for the SpeciesSpecificHabitat_A, SpeciesSpecificHabitat_L, and SpeciesSpecificHabitat_P data layers implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

A location that has biotic and abiotic characteristics that supports a particular species.

Data Layer Details

| | |
|--|---|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | SpeciesSpecificHabitat_A SpeciesSpecificHabitat_L SpeciesSpecificHabitat_P |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalNaturalResources |
| Previous Layer Names: | flora_spec_geo_range_area flora_species_home_range_area flora_species_population_area habitat_area habitat_point hist_bald_eagle_nesting_area hist_bald_eagle_nesting_point marine_species_occur_area migration_route_area migratory_stopover_area migratory_stopover_point nesting_area nesting_point species_population_area SpeciesSpecificHabitat |
| Geometry Type: | Polygon, Line, Point |
| Data Steward Organization (Program Area): | Program Area: Natural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Natural Resources Program SME |

| | |
|------------------------|---|
| Representation: | <ul style="list-style-type: none"> • All species habitat locations shall represent the latitude, longitude location of an identified species. Species habitat locations may differ by season and breeding habits of a particular species. • Species habitat areas are represented as closed polygons depicting the outermost extent of the species area. • Each individual species habitat is represented by a single area feature. • Species habitats will be represented as a continuous unbroken line. • All points developed from areas shall represent the centroid of the species specific habitat area. |
|------------------------|---|

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|--------------------------|--|
| HQ AF/A7CAN | <ul style="list-style-type: none"> • AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007 • AFI32-7062, Comprehensive Planning, 27 June 2013 • AFI32-7064, Integrated Natural Resources Management, 18 November 2014 • AFI32-7065, Cultural Resources Management Program, 19 November 2014 • AFH32-9007, Managing Air Force Real Property, 1 May 1999 • AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 • Fish and Wildlife Conservation Act of 1980 (PL 96-366) |

Geometry/Topology

| |
|--|
| Polygon Features: |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |
| Line Features: |
| Lines must be single part features. |
| Lines must be larger than cluster tolerance (.001 meter). |
| Point Features: |
| If a point represents a polygon feature, then the point must fall properly inside of the coinciding polygon. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the SpeciesSpecificHabitat_A, SpeciesSpecificHabitat_L, and SpeciesSpecificHabitat_P layers will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the SpeciesSpecificHabitat_A, SpeciesSpecificHabitat_L, and SpeciesSpecificHabitat_P data layers.

SDSFIE 3.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|---|--------------------|----------|
| | speciesSpecHabIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Species Specific Habitat. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Species Specific Habitat that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize (<i>Polygon geometry</i>) | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM (<i>Polygon geometry</i>) | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize (<i>Polygon geometry</i>) | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM (<i>Polygon geometry</i>) | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude (<i>Polygon geometry</i>) | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |

Data Layer Specification – Species Specific Habitat

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|-----------------------------------|--------------------|----------|
| | longitude <i>(Polygon geometry)</i> | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid <i>(Polygon geometry)</i> | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | lengthSize <i>(Line geometry)</i> | The value of the measured length. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | lengthSizeUOM <i>(Line geometry)</i> | The unit of measure for the calculated length. | foot | String (25) | AF |
| | latitudeFrom <i>(Line geometry)</i> | The latitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | latitudeTo <i>(Line geometry)</i> | The latitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeFrom <i>(Line geometry)</i> | The longitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |

Data Layer Specification – Species Specific Habitat

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|---|-----------------|--------------------|----------|
| | longitudeTo <i>(Line geometry)</i> | The longitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | elevationFrom <i>(Line geometry)</i> | The elevation component of the beginning (upstream/upgradient) coordinate point in feet. | | Double | AF |
| | elevationTo <i>(Line geometry)</i> | The elevation component of the ending (downstream/down gradient) coordinate point in feet. | | Double | AF |
| D | elevationUOM <i>(Line geometry)</i> | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | latitude <i>(Point geometry)</i> | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude <i>(Point geometry)</i> | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | MGRS <i>(Point geometry)</i> | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation <i>(Point geometry)</i> | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM <i>(Point geometry)</i> | The unit of measure for elevation dimension. | foot | String (25) | AF |

Data Layer Specification – Species Specific Habitat

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|--|--------------------|----------|
| D | habitatDescript | A descriptor of the type of habitat. | For a list of domain values, see HabitatDescriptor in Appendix 1. | String (20) | AF |
| D | isOccupied | A value representing whether the species or suite of species exists in the location. | NA, no, TBD, yes | String (3) | SDSFIE |
| D | habitatUse | Specific use of the habitat by the target species, e.g., nesting, resting, loafing, breeding. | For a list of domain values, see HabitatUse in Appendix 1. | String (10) | AF |
| D | isCritical | A Boolean value representing whether or not an agency (like the US Fish and Wildlife Service in the United States) or country has determined and listed this location as critical to the existence of a species. | NA, no, TBD, yes | String (3) | SDSFIE |
| D | isManagedHabitat | A Boolean value representing whether or not the habitat is managed. | NA, no, TBD, yes | String (3) | SDSFIE |
| | commonName | The common name of the species. | | String (255) | SDSFIE |
| | scientificName | The scientific name of the species. | | String (255) | SDSFIE |
| D | isNative | The species is a native species. If false, the assumption is that the species is exotic. | NA, no, TBD, yes | String (3) | SDSFIE |
| | natureServeID | The unique identifier for the NatureServe record of the species (http://www.natureserve.org). | Examples: "2.453627" or "2.102013". | String (10) | SDSFIE |

Data Layer Specification – Species Specific Habitat

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | kingdom | A descriptor identifying one of the five taxonomic kingdoms into which scientists place all living organisms. | For a list of domain values, see KingdomType in Appendix 1. | String (10) | SDSFIE |
| D | speciesCat | The code indicating the class of flora or fauna. | For a list of domain values, see SpeciesCat in Appendix 1. | String (15) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |

Data Layer Specification – Species Specific Habitat

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |

Data Layer Specification – Species Specific Habitat

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |

Data Layer Specification – Species Specific Habitat

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|-----------------------|----------------|--------------------|----------|
| | SHAPE_Length (Polygon and Line geometry) | ESRI-generated field. | | | ESRI |
| | SHAPE_Area (Polygon geometry) | ESRI-generated field. | | | ESRI |

Business Tables

The business tables will contain information that goes beyond the attribute table information, which will be related to the data layer using a Primary Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business tables for SpeciesSpecificHabitat_A, SpeciesSpecificHabitat_L, and SpeciesSpecificHabitat_P are:

| Table Name | Identifier | Source |
|-----------------------------|--------------------|----------------------|
| nr_SpeciesSpecificHabitat_A | speciesSpecHabIDFK | Program Area Manager |
| nr_SpeciesSpecificHabitat_L | speciesSpecHabIDFK | Program Area Manager |
| nr_SpeciesSpecificHabitat_P | speciesSpecHabIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Data Layer Specification – Species Specific Habitat

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Attribute Domain Tables

| DOMAIN TABLE NAME: HabitatDescriptor | |
|--------------------------------------|---|
| ATTRIBUTE NAME: habitatDescrip | |
| CODED DOMAIN | DEFINITION |
| cave | The habitat area consists of one or more caves. |
| clearing | The habitat area exists in a clearing. |
| cliff | The habitat area exists on one or more cliffs. |
| coastal | The habitat area is coastal. |
| coralReefs | The habitat area is within coral reefs. |
| cultivatedField | The habitat area exists in cultivated fields. |
| desert | The habitat area exists in a desert environment. |
| estuarine | The habitat area is estuarine. |
| forest | The habitat area exists in a forested region. |
| grasslands | The habitat area exists within a grassland environment. |
| ice | The habitat area consists of ice. |
| lake | The habitat area is within one or more lakes. |
| lowland | The habitat area is within the lowlands. |
| meadow | The habitat area is within a meadow. |
| NA | Not Applicable: No value exists. |
| naturalBank | The habitat area exists on a natural bank. |
| nearshore | The habitat area is nearshore zone, dune line to closure depth. |
| ocean | The habitat area is within an ocean. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| perennialSnow | The habitat area is in locations with perennial snow. |
| ponds | The habitat area is within one or more ponds. |
| prairie | The habitat area is within a prairie environment. |
| riparian | The habitat area is riparian. |
| rivers | The habitat area is within one or more rivers. |
| savanna | The habitat area is within a savanna environment. |
| shoal | The habitat area is on a shoal. |
| shoreZone | The habitat area is within the shore zone. |
| stream | The habitat area is within one or more streams. |
| swamp | The habitat area is within a swamp environment. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| undevelopedLand | The habitat area is within undeveloped land. |
| unknown | The habitat type is unknown. |
| unvegSand | The habitat area is within unvegetated sand. |
| upland | The habitat area is within an upland environment. |
| urbanLand | The habitat area is within urban land. |
| vegSand | The habitat area is within vegetated sand. |
| wetlands | The habitat area is within a wetlands environment. |

| DOMAIN TABLE NAME: HabitatUse | |
|-------------------------------|---|
| ATTRIBUTE NAME: habitatUse | |
| CODED DOMAIN | DEFINITION |
| breeding | The species uses the habitat for breeding purposes. |
| feeding | The species uses the habitat for feeding purposes. |
| loafing | The species uses the habitat for loafing purposes. |
| NA | Not Applicable: No value exists. |

Data Layer Specification – Species Specific Habitat

| DOMAIN TABLE NAME: HabitatUse | |
|-------------------------------|---|
| ATTRIBUTE NAME: habitatUse | |
| nesting | The species uses the habitat for nesting purposes. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| resting | The species uses the habitat for resting purposes. |
| roosting | The species uses the habitat for roosting purposes. |
| stopover | The species uses the habitat as a stopover. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| wintering | The species uses the habitat for wintering purposes. |

| DOMAIN TABLE NAME: KingdomType | |
|--------------------------------|---|
| ATTRIBUTE NAME: kingdom | |
| CODED DOMAIN | DEFINITION |
| animalia | Animals are a major group of multicellular, eukaryotic organisms of the kingdom Animalia. |
| fungi | A fungus is a eukaryotic organism that is a member of the kingdom Fungi. |
| monera | Monera are bacteria and other mostly tiny, single-celled organisms whose genetic material is loose in the cell. Once Monera were briefly understood to be one of five biological kingdoms. Now it comprises two kingdoms: Eubacteria and Archaeobacteria. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| plantae | Plants are a major group of multicellular, eukaryotic organisms of the kingdom Plantae. |
| protista | Protists are unicellular eukaryotes that either exist as independent cells, or if they occur in colonies, do not show differentiation into tissues and are members of the kingdom Protista. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: SpeciesCat | |
|-------------------------------|---|
| ATTRIBUTE NAME: speciesCat | |
| CODED DOMAIN | DEFINITION |
| amphibia | Amphibian species. |
| aves | Avian (Birds) species. |
| bryoid | Bryoid species. |
| crustacea | Crustacean species. |
| epiphyte | Epiphyte species. |
| general | An aggregate of more than one species. |
| herb | Herb species. |
| insecta | Insect species. |
| liana | Liana species. |
| mammalia | Mammal species. |
| mollusca | Mollusk species. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| pisces | Pisces (Fish) species. |
| reptilia | Reptile species. |
| shrub | Shrub species. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| thallophyte | Thallophyte species. |
| tree | Tree species. |

Data Layer Specification – Surface Riparian Area

This Data Layer Specification (DLS) defines geospatial data specifications for the SurfaceRiparianArea_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

A vegetated ecosystem along a water body through which energy, material, and water pass and is managed to maintain the integrity of stream channels and shorelines, to reduce the impact of upland sources of pollution by trapping, filtering, and converting sediments, nutrients, and other chemicals, and to supply food, cover and thermal protection to fish and other wildlife.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | SurfaceRiparianArea_A |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalNaturalResources |
| Previous Layer Names: | surface_riparian_area LandCover |
| Geometry Type: | Polygon |
| Data Steward Organization (Program Area): | Program Area: Natural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Natural Resources Program SME |
| Representation: | <ul style="list-style-type: none">• Surface riparian areas are represented as closed polygons depicting the outermost extent of the area.• Each individual surface riparian area is represented by a single area feature. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|---------------------------------|---|
| HQ AF/A7CAN | <ul style="list-style-type: none">• AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007• AFI32-7062, Comprehensive Planning, 27 June 2013• AFI32-7064, Integrated Natural Resources Management, 18 November 2014• AFI32-7065, Cultural Resources Management Program, 19 November 2014• AFH32-9007, Managing Air Force Real Property, 1 May 1999• AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 |

Data Layer Specification – Surface Riparian Area

| Implementing Program(s): | Driver(s): |
|--------------------------|---|
| | <ul style="list-style-type: none">• Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003• USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009• Real Property Inventory Management (RPIM), v2.0• RPIM 3.0, extracted 4/2009• Chesapeake Bay Preservation Act and Coastal Zone Management Act (CZMA)• Fish and Wildlife Conservation Act of 1980 |

Geometry/Topology

| Polygon Features: |
|--|
| SurfaceRiparianArea_A must not overlap with WaterFeature_A. |
| SurfaceRiparianArea_A must not overlap with WaterBody_A. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: publicly available data from the U.S. Fish and Wildlife Service National Wetlands Inventory (select regions west of the Mississippi River), planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Data Layer Specification – Surface Riparian Area

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the SurfaceRiparianArea_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the SurfaceRiparianArea_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|--|--------------------|----------|
| | surfRiparianAreaIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Surface Riparian Area. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Surface Riparian Area that is not already included in the attribute table. | String (255) | SDSFIE |

Data Layer Specification – Surface Riparian Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|------------------------------------|--------------------|----------|
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| D | isRegulated | Indicates whether the feature is regulated by Federal, State or local jurisdiction or no regulation. | NA, no, TBD, yes | String (3) | AF |
| | bufferWidth | The width, in feet, of any associated buffer. | | Double | AF |
| D | bufferWidthUOM | The unit of measure for buffer width dimension. | foot | String (25) | AF |
| | bufferLength | The length, in feet, of the buffer along the stream corridor. | | Double | AF |

Data Layer Specification – Surface Riparian Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|--|--------------------|----------|
| D | bufferLengthUOM | The unit of measure for buffer length dimension. | foot | String (25) | AF |
| | bufferSource | A narrative describing the source of the buffer, e.g. is it legislatively determined by the state, city or other governing entity. | | String (125) | AF |
| D | fwsSubsystem | Type of US Fish and Wildlife Service riparian subsystem. | For a list of domain values, see FWSSubsystem in Appendix 1. | String (10) | AF |
| D | fwsClass | Type of US Fish and Wildlife Service riparian class. | For a list of domain values, see FWSclass in Appendix 1. | String (15) | AF |
| D | fwsSubclass | Type of US Fish and Wildlife Service riparian subclass. | For a list of domain values, see FWSsubclass in Appendix 1. | String (10) | AF |
| D | oppBank | Status of the opposite bank of the stream. | For a list of domain values, see OppBank in Appendix 1. | String (15) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |

Data Layer Specification – Surface Riparian Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |

Data Layer Specification – Surface Riparian Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |

Data Layer Specification – Surface Riparian Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for SurfaceRiparianArea_A is:

| Table Name | Identifier | Source |
|------------------------|----------------------|----------------------|
| nr_SurfaceRiparianArea | surfRiparianAreaIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

Data Layer Specification – Surface Riparian Area

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Natural Resources, Surface Riparian Area

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: FWSclass | |
|-----------------------------|---|
| ATTRIBUTE NAME: fwsClass | |
| CODED DOMAIN | DEFINITION |
| emergent | The surface riparian class is emergent. |
| forested | The surface riparian class is forested. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| scrub-Shrub | The surface riparian class is scrub-shrub. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: FWSsubclass | |
|--------------------------------|---|
| ATTRIBUTE NAME: fwsSubclass | |
| CODED DOMAIN | DEFINITION |
| dead | The surface riparian subclass is dead. |
| deciduous | The surface riparian subclass is deciduous. |
| evergreen | The surface riparian subclass is evergreen. |
| mixed | The surface riparian subclass is mixed. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: FWSsubsystem | |
|---------------------------------|---|
| ATTRIBUTE NAME: fwsSubsystem | |
| CODED DOMAIN | DEFINITION |
| lentic | The subsystem inhabits still fresh water. |
| lotic | The subsystem inhabits rapidly moving fresh water. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: OppBank | |
|----------------------------|---|
| ATTRIBUTE NAME: oppBank | |
| CODED DOMAIN | DEFINITION |
| buffered | Opposite bank is also protected. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| proposed | Opposite bank is proposed for protection. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | Unknown status. |
| unprotected | Opposite bank is not protected. |

Data Layer Specification – Vegetation

This Data Layer Specification (DLS) defines geospatial data specifications for the Vegetation_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

A discrete area where terrestrial flora has been classified according to the National Vegetation Classification Standard (Version 2).

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | Vegetation_A |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalNaturalResources |
| Previous Layer Names: | land_vegetation_area LandCover Vegetation |
| Geometry Type: | Polygon |
| Data Steward Organization (Program Area): | Program Area: Natural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Natural Resources Program SME |
| Representation: | <ul style="list-style-type: none">• Vegetation areas are represented as closed polygons depicting the outermost extent of the vegetation type.• Each individual vegetation type area is represented by a single area feature. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|---------------------------------|---|
| HQ AF/A7CAN | <ul style="list-style-type: none">• AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007• AFI32-7062, Comprehensive Planning, 27 June 2013• AFI32-7064, Integrated Natural Resources Management, 18 November 2014• AFI32-7065, Cultural Resources Management Program, 19 November 2014• AFH32-9007, Managing Air Force Real Property, 1 May 1999• AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 |

| Implementing Program(s): | Driver(s): |

| | <ul style="list-style-type: none"> • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 • The Wilderness Act (16 USC 1133) |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must not overlap. |
| Polygons must not have gaps. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Since there are no definitive boundaries for this layer, a horizontal positional accuracy threshold is not applicable. However, if the data was acquired from an outside agency, the accuracy threshold/report of the originating agency is acceptable.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the Vegetation_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the Vegetation_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|--|--------------------|----------|
| | vegetationIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Vegetation type. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Vegetation type that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |

Data Layer Specification – Vegetation

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|---|--------------------|----------|
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| D | formationClass | A descriptor which is the first (highest) level in the NVC natural vegetation hierarchy, in which each vegetation unit is defined by a characteristic combination of dominant growth forms adapted to a very basic set of moisture/ temperature regimes. | For a list of domain values, see FGDCformationClassType in Appendix 1. | String (5) | SDSFIE |

Data Layer Specification – Vegetation

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-------------------|--|--|--------------------|----------|
| D | formationSubclass | A descriptor which is the second level in the NVC natural vegetation hierarchy, in which each vegetation unit is defined by geographically widespread (global) plant communities of similar physiognomy and dominant growth forms, typically related to major climatic conditions (Whittaker 1975, Lincoln et al. 1998). | For a list of domain values, see FGDCformationSubclassType in Appendix 1. | String (5) | SDSFIE |
| D | formation | A descriptor which is the third level in the NVC natural vegetation hierarchy, in which each vegetation unit is defined by geographically widespread (global) plant communities of similar physiognomy and dominant growth forms, typically related to major topographic and edaphic conditions occurring within major climatic conditions (Whittaker 1975, Lincoln et al. 1998) | For a list of domain values, see FGDCformationType in Appendix 1. | String (5) | SDSFIE |

Data Layer Specification – Vegetation

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | division | <p>The fourth level in the NVC natural vegetation hierarchy, in which each vegetation unit is defined by a group of plant communities in a given continental or other broad geographic area exhibiting a common set of dominant growth forms and many diagnostic plant taxa (including character taxa of the dominant growth forms) corresponding to broad climatic and environmental characteristics. (Westhoff and van der Maarel 1973, p 664-665, Whittaker 1975).</p> | | String (255) | SDSFIE |

Data Layer Specification – Vegetation

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------|---|----------------|--------------------|----------|
| | macroGroup | The fifth level in the NVC natural vegetation hierarchy, in which each vegetation unit is defined by a group of plant communities with a common set of growth forms and many diagnostic plant taxa, including many character taxa of the dominant growth forms, preferentially sharing a broadly similar geographic region and regional climate, and disturbance. (cf Pignatti et al. 1995, and Braun-Blanquet concept of Class). | | String (255) | SDSFIE |
| | vegetationGroup | The sixth level in the NVC natural vegetation hierarchy, in which each vegetation unit is defined by a group of plant communities with a common set of growth forms and diagnostic species or taxa (including several character species of the dominant growth forms), preferentially sharing a similar set of regional edaphic, topographic, and disturbance factors. (cf. Pignatti et al. 1995, Specht and Specht 2001). | | String (255) | SDSFIE |

Data Layer Specification – Vegetation

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|--|--------------------|----------|
| | alliance | The seventh level in the NVC natural vegetation hierarchy defined by a characteristic range of species composition, habitat conditions, physiognomy, and diagnostic species, typically at least one of which is found in the upper most or dominant stratum of the vegetation (Jennings et al.2006). | | String (255) | SDSFIE |
| | classDate | The date the vegetation was classified. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |

Data Layer Specification – Vegetation

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |

Data Layer Specification – Vegetation

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |

Data Layer Specification – Vegetation

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for Vegetation_A is:

| Table Name | Identifier | Source |
|---------------|----------------|----------------------|
| nr_Vegetation | vegetationIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

Data Layer Specification – Vegetation

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Natural Resources, Vegetation

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Attribute Domain Tables

| DOMAIN TABLE NAME: FGDCformationClassType | |
|---|---|
| ATTRIBUTE NAME: formationClass | |

| 3/1/2018 | WaterBody_20180301 | <ul style="list-style-type: none"> Updated Geometry/Topology, Sources and Source Selection, Positional Accuracy, and Attributes section. |

Data Layer Specification – Water Body

This Data Layer Specification (DLS) defines geospatial data specifications for the WaterBody_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

An accumulation of water, such as oceans, seas, and lakes, but also includes smaller pools of open water such as ponds that are managed by Natural Resources. These water bodies can be naturally occurring or impounded. If the water body is utilized by Civil Engineering, it does not belong here and should be placed in the appropriate data layer.

Data Layer Details

| | |
|--|---|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | WaterBody_A |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalNaturalResources |
| Previous Layer Names: | surface_water_body_area NaturalWaterbody |
| Geometry Type: | Polygon |
| Data Steward Organization (Program Area): | Program Area: Natural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Natural Resources Program SME |
| Representation: | <ul style="list-style-type: none">• Water bodies are represented as closed polygons depicting the outermost extent of the area.• Each individual water body is represented by a single area feature. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|---------------------------------|---|
| HQ AF/A7CAN | <ul style="list-style-type: none">• AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007• AFI32-7062, Comprehensive Planning, 27 June 2013• AFI32-7064, Integrated Natural Resources Management, 18 November 2014• AFI32-7065, Cultural Resources Management Program, 19 November 2014• AFH32-9007, Managing Air Force Real Property, 1 May 1999• AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 |

| Implementing Program(s): | Driver(s): |
|--------------------------|---|
| | <ul style="list-style-type: none"> • Clean Water Act, 1977 • EO 11990, Protection of Wetlands, 24 May 1977 • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 • 40 CFR 141.2 Surface Water • The Safe Drinking Water Act |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must not overlap. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: publicly available data from the U.S. Geological Survey National Hydrography Dataset, planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Data Layer Specification – Water Body

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the WaterBody_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the WaterBody_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|--|--------------------|----------|
| | waterBodyIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Water Body area. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Water Body area that is not already included in the attribute table. | String (255) | SDSFIE |

Data Layer Specification – Water Body

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|--|--------------------|----------|
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | hydroCode | Permanent unique public identifier for the feature (e.g., USGS code or similar). | | String (40) | SDSFIE |
| D | permCode | A code indicating the degree of permanence of the feature. | For the list of domain values see PermCode in Appendix 1. | String (15) | SDSFIE |
| D | bodyType | The type of water body: ocean, pond, etc. | For the list of domain values see BodyType in Appendix 1. | String (15) | AF |
| | maxDepth | The maximum depth, in feet, of water in the water body when full. | | Double | AF |
| D | maxDepthUOM | The unit of measure for the depth. | foot | String (25) | AF |

Data Layer Specification – Water Body

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | isManmade | Indicates whether a water body is manmade. | NA, no, TBD, yes | String (3) | AF |
| D | isTidal | Indicates whether the feature is tidal. | NA, no, TBD, yes | String (3) | AF |
| D | salinityType | The salinity category of the feature. Haline refers to coastal waters and saline refers to inland waters. | For the list of domain values see SalinityType in Appendix 1. | String (20) | AF |
| | salinity | The total quantity of dissolved salts in water, measured by weight; 1 Practical Salinity Unit (PSU) = 1 Parts Per Thousand (PPT). | | String (50) | AF |
| D | isAcidic | Indicates whether the feature is acidic. | NA, no, TBD, yes | String (3) | AF |
| D | isAlkaline | Indicates whether the feature is alkaline. | NA, no, TBD, yes | String (3) | AF |
| D | nutrientClass | A descriptor of the nutrient class of the feature. | For a list of domain values, see NutrientClass in Appendix 1. | String (12) | SDSFIE |
| | elevMax | The maximum elevation of the feature in feet. | | Double | AF |
| D | elevMaxUOM | The unit of measure for the maximum elevation. | foot | String (25) | AF |
| | elevMin | The minimum elevation of the feature in feet. | | Double | AF |
| D | elevMinUOM | The unit of measure for the minimum elevation. | foot | String (25) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |

Data Layer Specification – Water Body

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |

Data Layer Specification – Water Body

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |

Data Layer Specification – Water Body

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for WaterBody_A is:

| Table Name | Identifier | Source |
|--------------|---------------|----------------------|
| nr_WaterBody | waterBodyIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Attribute Domain Tables

| DOMAIN TABLE NAME: BodyType | |
|-----------------------------|---|
| ATTRIBUTE NAME: bodyType | |
| CODED DOMAIN | |
| bay | A water body associated with the mouth of a river. |
| duckPond | A small water body, modified by man specifically to function as duck habitat. |
| fishHatchery | Water bodies used exclusively for the hatching and raising of fish. |
| lake | Lake. |
| mReservior | An artificial lake with masonry sides where water is collected and kept in quantity for use. |
| NA | Not Applicable: No value exists. |
| ocean | Ocean. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| pond | A small water body, occasionally man made. |
| saltLake | A lake with a very high salt content. |
| saltPond | A small water body with a very high salt content. |
| tailingsPond | A small water body which contains mill wastes which are in the form of finely divided particles suspended in water and disposed of in that fashion. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: NutrientClass | |
|----------------------------------|---|
| ATTRIBUTE NAME: nutrientClass | |
| CODED DOMAIN | |
| eutrophic | Eutrophic (High Nutrient, Low Oxygen) |
| mesotrophic | Mesotrophic (Medium Nutrient And Oxygen) |
| NA | Not Applicable: No value exists. |
| oligotrophic | Oligotrophic (Low Nutrient, High Oxygen) |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The nutrient class is unknown. |

| DOMAIN TABLE NAME: PermCode | |
|-----------------------------|--|
| ATTRIBUTE NAME: permCode | |
| CODED DOMAIN | |
| dry | Almost never contains water and if so, it is as a direct result of local storms. |
| intermittent | Contains or does not contain water based on climatic conditions. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| permanent | Contains water except under extreme circumstances. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: SalinityType | |
|---------------------------------|--|
| ATTRIBUTE NAME: salinityType | |
| CODED DOMAIN | DEFINITION |
| euhaline | Euhaline – Water with a concentration of ocean-derived salts measuring 30.0-40 ppt |

Data Layer Specification – Water Body

| DOMAIN TABLE NAME: SalinityType | |
|---------------------------------|--|
| ATTRIBUTE NAME: salinityType | |
| eusaline | Eusaline – Water with a concentration of land-derived salts measuring 30.0-40 ppt. |
| fresh | Freshwater – Water with a dissolved salt concentration measuring <0.5 ppt. |
| hyperhaline | Hyperhaline – Water with a concentration of ocean-derived salts measuring >40 ppt. |
| hypersaline | Hypersaline – Water with a concentration of land-derived salts measuring >40 ppt. |
| mesohaline | Mesohaline – Water with a concentration of ocean-derived salts measuring 5.0-18 ppt. |
| mesosaline | Mesosaline – Water with a concentration of land-derived salts measuring 5.0-18 ppt. |
| mixohaline | Mixohaline – Water with a concentration of ocean-derived salts measuring 0.5-30 ppt. The term is roughly equivalent to the term brackish. |
| mixosaline | Mixosaline – Water with a concentration of land-derived salts measuring 0.5-30 ppt. |
| NA | Not Applicable: No value exists. |
| oligohaline | Oligohaline – Water with a concentration of ocean-derived salts measuring 0.5-5 ppt. |
| oligosaline | Oligosaline – Water with a concentration of land-derived salts measuring 0.5-5 ppt. |
| polyhaline | Polyhaline – Water with a concentration of ocean-derived salts measuring 18.0-30 ppt. |
| polysaline | Polysaline – Water with a concentration of land-derived salts measuring 18.0-30 ppt. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

Data Layer Specification – Watercourse Line

This Data Layer Specification (DLS) defines geospatial data specifications for the WatercourseLine_L data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

A hydroline defining a reach of a watercourse that is managed by Natural Resources (e.g. creek, stream, river). The watercourse can either occur naturally or be channelized. If the watercourse feature is managed by Civil Engineering, it should not be included here and be placed in the appropriate data layer.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | WatercourseLine_L |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalNaturalResource |

| | <ul style="list-style-type: none">• Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003• USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009• Real Property Inventory Management (RPIM), v2.0• RPIM 3.0, extracted 4/2009• 40 CFR 141.2 Surface Water• The Safe Drinking Water Act• EO 11988, Floodplain Management |

Geometry/Topology

| Line Features: |
|---|
| Lines must not overlap. |
| Lines must not intersect. |
| Lines must not have dangles. |
| Lines must not self-intersect. |
| Lines must not self-overlap. |
| WatercourseLine_L must be inside Watershed_A. |
| Lines must be single part features. |
| Lines must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: publicly available data from the U.S. Geological Survey National Hydrography Dataset, planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Data Layer Specification – Watercourse Line

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the WatercourseLine_L layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the WatercourseLine_L data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---------------------|--|--|--------------------|----------|
| | watercourseLineIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Watercourse Line. | String (80) | SDSFIE |

Data Layer Specification – Watercourse Line

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|---|--------------------|----------|
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Watercourse Line that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | lengthSize | The value of the measured length. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | lengthSizeUOM | The unit of measure for the calculated length. | foot | String (25) | AF |
| | latitudeFrom | The latitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | latitudeTo | The latitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeFrom | The longitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeTo | The longitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |

Data Layer Specification – Watercourse Line

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------|---|--|--------------------|----------|
| | elevationFrom | The elevation component of the beginning (upstream/upgradient) coordinate point in feet. | | Double | AF |
| | elevationTo | The elevation component of the ending (downstream/downgradient) coordinate point in feet. | | Double | AF |
| D | elevationUOM | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | hydroCode | Permanent unique public identifier for the feature (e.g., USGS code or similar). | | String (40) | SDSFIE |
| D | permCode | A code indicating the degree of permanence of the feature. | For the list of domain values see PermCode in Appendix 1. | String (15) | SDSFIE |
| | reachIdentifier | Defines a unique identifier for this particular reach of a river (a segment between two watercourse junctions, such as Upper, Lower, East Fork, or Reach 13). | | String (80) | SDSFIE |
| | reachDate | Date reach code was assigned. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| D | watercourseElement | Discriminates which element of the reach is defined by this feature. | For the list of domain values see WatercourseElement in Appendix 1. | String (20) | SDSFIE |
| D | streamType | A descriptor of the stream or river type. | For the list of domain values see StreamType in Appendix 1. | String (15) | AF |

Data Layer Specification – Watercourse Line

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| D | govMgt | The government that manages the river or stream designated for protection by state/federal/local authority (e.g. wild and scenic river). | For the list of domain values see GovMgt in Appendix 1. | String (10) | AF |
| D | isNavigable | Indicates whether the line designates a navigable portion of the watercourse. | NA, no, TBD, yes | String (3) | SDSFIE |
| D | isArtificial | Indicates whether the feature was artificially constructed. | NA, no, TBD, yes | String (3) | AF |
| D | isCanals | Indicates whether the feature is lined on one or both sides with canals. | NA, no, TBD, yes | String (3) | AF |
| D | isTidal | Indicates whether the feature is tidal. | NA, no, TBD, yes | String (3) | AF |
| D | salinityType | The salinity category of the feature. Haline refers to coastal waters and saline refers to inland waters. | For the list of domain values see SalinityType in Appendix 1. | String (20) | AF |
| | salinity | The total quantity of dissolved salts in water, measured by weight; 1 Practical Salinity Unit (PSU) = 1 Parts Per Thousand (PPT). | | String (50) | AF |
| D | isAcidic | Indicates whether the feature is acidic. | NA, no, TBD, yes | String (3) | AF |
| D | isAlkaline | Indicates whether the feature is alkaline. | NA, no, TBD, yes | String (3) | AF |
| D | nutrientClass | A descriptor of the nutrient class of the feature. | For a list of domain values, see NutrientClass in Appendix 1. | String (12) | AF |

Data Layer Specification – Watercourse Line

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | bedBottom | A descriptor of the bed lining of the bottom of the feature. | For a list of domain values, see BedMaterial in Appendix 1. | String (15) | AF |
| D | bedLeftBank | A descriptor of the bed lining of the left bank of the water feature, looking down the flow of water. | For a list of domain values, see BedMaterial in Appendix 1. | String (15) | AF |
| D | bedRightBank | A descriptor of the bed lining of the right bank of the water feature, looking down the flow of water. | For a list of domain values, see BedMaterial in Appendix 1. | String (15) | AF |
| | gradBottom | The slope or gradient of the bottom of the feature as percent slope. | | Double | AF |
| | gradLeftBank | The slope or gradient of the left bank of the feature, looking down the flow of water, as percent slope. | | Double | AF |
| | gradRightBank | The slope or gradient of the right bank of the feature, looking down the flow of water, as percent slope. | | Double | AF |
| D | gradientUOM | The unit of measure for the gradient. | percentSlope | String (25) | AF |
| | discharge | Discharge of river in cubic feet per second. | | Double | AF |
| D | dischargeUOM | The unit of measure for the discharge of the river. | cubicFootPerSecond | String (45) | AF |
| | velocityMax | The maximum velocity, in feet per second, of the flow of water. | | Double | AF |
| | velocityMean | The mean velocity, in feet per second, of the flow of water. | | Double | |

Data Layer Specification – Watercourse Line

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|---|--|--------------------|----------|
| D | velocityUOM | The unit of measure for the velocity. | footPerSecond | String (45) | |
| | fromJunction | The sdsID of the source WatercourseJunction in the stream network to which this feature belongs. | | GUID | SDSFIE |
| | toJunction | The sdsID of the sink WatercourseJunction in the stream network to which this feature belongs. | | GUID | SDSFIE |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |

Data Layer Specification – Watercourse Line

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |

Data Layer Specification – Watercourse Line

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |

Data Layer Specification – Watercourse Line

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for WatercourseLine_L is:

| Table Name | Identifier | Source |
|--------------------|---------------------|----------------------|
| nr_WatercourseLine | watercourseLineIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

Data Layer Specification – Watercourse Line

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Attribute Domain Tables

| DOMAIN TABLE NAME: BedMaterial | |
|--|---|
| ATTRIBUTE NAME: bedBottom, bedLeftBank, bedRightBank | |
| CODED DOMAIN | DEFINITION |
| aquaticWeed | The bed or bank material consists of aquatic weed. |
| cementedStone | The bed or bank material consists of cemented stones. |
| clay | The bed or bank material consists of clay. |
| concreteLined | The bed or bank is concrete lined. |
| crSandGravel | The bed or bank material consists of coarse sand and gravel. |
| exposedRock | The bed or bank is exposed rock. |
| fineSand | The bed or bank material consists of fine sand. |
| grassed | The bed or bank is grass. |
| gravelStone | The bed or bank material consists of gravel to larger stone. |
| NA | Not Applicable: No value exists. |
| organicMud | The bed or bank material consists of organic mud. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| placedStone | The bed or bank is placed stone. |
| sand | The bed or bank material consists of sand. |
| siltSand | The bed or bank material consists of silty sand. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| underbrush | The bed or bank is underbrush. |
| unknown | The bed or bank material is unknown. |

| DOMAIN TABLE NAME: GovMgt | |
|---------------------------|---|
| ATTRIBUTE NAME: govMgt | |
| CODED DOMAIN | DEFINITION |
| city | City Government |
| county | County Government |
| federal | Federal Government |
| local | Local |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| state | State Government |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: GradientUOM | |
|--------------------------------|--|
| ATTRIBUTE NAME: gradientUOM | |
| CODED DOMAIN | DEFINITION |
| degrees | Degrees. |
| eastToWest | East to West. |
| grades | Grades. |
| microradians | Microradians. |
| milliradians | Milliradians. |
| minAngle | A unit of angular measure equal to one sixtieth of a degree or 60 seconds. |
| NA | Not Applicable: No value exists. |
| northeastToSouthwest | Northeast to Southwest. |
| northToSouth | North to South. |

Data Layer Specification – Watercourse Line

| DOMAIN TABLE NAME: GradientUOM | |
|--------------------------------|---|
| ATTRIBUTE NAME: gradientUOM | |
| northwestToSoutheast | Northwest to Southeast. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| percentSlope | Percent slope. |
| quadrant | Quadrant. |
| radians | Radians. |
| rotation | Rotation. |
| secAngle | A unit of angular measure equal to one sixtieth of a minute of an arc. |
| southeastToNorthwest | Southeast to Northwest. |
| southToNorth | South to North. |
| southwestToNortheast | Southwest to Northeast. |
| steradians | Steradians. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| westToEast | West to East. |

| DOMAIN TABLE NAME: NutrientClass | |
|----------------------------------|---|
| ATTRIBUTE NAME: nutrientClass | |
| CODED DOMAIN | DEFINITION |
| eutrophic | Eutrophic (High Nutrient, Low Oxygen) |
| mesotrophic | Mesotrophic (Medium Nutrient And Oxygen) |
| NA | Not Applicable: No value exists. |
| oligotrophic | Oligotrophic (Low Nutrient, High Oxygen) |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The nutrient class is unknown. |

| DOMAIN TABLE NAME: PermCode | |
|-----------------------------|--|
| ATTRIBUTE NAME: permCode | |
| CODED DOMAIN | DEFINITION |
| dry | Almost never contains water and if so, it is as a direct result of local storms. |
| intermittent | Contains or does not contain water based on climatic conditions. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| permanent | Contains water except under extreme circumstances. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: SalinityType | |
|---------------------------------|--|
| ATTRIBUTE NAME: salinityType | |
| CODED DOMAIN | DEFINITION |
| euhaline | Euhaline – Water with a concentration of ocean-derived salts measuring 30.0-40 ppt |
| eusaline | Eusaline – Water with a concentration of land-derived salts measuring 30.0-40 ppt. |
| fresh | Freshwater – Water with a dissolved salt concentration measuring <0.5 ppt. |
| hyperhaline | Hyperhaline – Water with a concentration of ocean-derived salts measuring >40 ppt. |
| hypersaline | Hypersaline – Water with a concentration of land-derived salts measuring >40 ppt. |
| mesohaline | Mesohaline – Water with a concentration of ocean-derived salts measuring 5.0-18 ppt. |
| mesosaline | Mesosaline – Water with a concentration of land-derived salts measuring 5.0-18 ppt. |
| mixohaline | Mixohaline – Water with a concentration of ocean-derived salts measuring 0.5-30 ppt. The term is roughly equivalent to the term brackish. |

Data Layer Specification – Watercourse Line

| DOMAIN TABLE NAME: SalinityType | |
|---------------------------------|---|
| ATTRIBUTE NAME: salinityType | |
| mixosaline | Mixosaline – Water with a concentration of land-derived salts measuring 0.5-30 ppt. |
| NA | Not Applicable: No value exists. |
| oligohaline | Oligohaline – Water with a concentration of ocean-derived salts measuring 0.5-5 ppt. |
| oligosaline | Oligosaline – Water with a concentration of land-derived salts measuring 0.5-5 ppt. |
| polyhaline | Polyhaline – Water with a concentration of ocean-derived salts measuring 18.0-30 ppt. |
| polysaline | Polysaline – Water with a concentration of land-derived salts measuring 18.0-30 ppt. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: StreamType | |
|-------------------------------|---|
| ATTRIBUTE NAME: streamType | |
| CODED DOMAIN | DEFINITION |
| canal | A canal is an artificial waterway for navigation or irrigating land. |
| channelized | The feature represents a river or stream that has been channelized. |
| culvert | A culvert is a structure used to channel water underneath a roadway or other feature. |
| flume | A flume is an inclined channel for carrying water. |
| NA | Not Applicable: No value exists. |
| natural | The feature represents a river or stream course that is naturally occurring. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| scenicRiver | The feature represents a scenic river or stream. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| wildRiver | The feature represents a wild river or stream. |

| DOMAIN TABLE NAME: WatercourseElement | |
|---------------------------------------|--|
| ATTRIBUTE NAME: watercourseElement | |
| CODED DOMAIN | DEFINITION |
| geometricCenterline | The element represents a line drawn in the geometric center of the watercourse and would typically be used to define the reach stations in a stream network with cross-sections. |
| leftBank | The element represents the bank to ones left while facing downstream. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| rightBank | The element represents the bank to ones right while facing downstream. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| thalweg | The element represents a line drawn to join the lowest points along the entire length of a watercourse in its downward slope, defining its deepest channel. |
| thruWaterbody | The element represents a line drawn in the geometric center of a Waterbody and thus represents the flow through a waterbody in a stream network. |
| toe | A line drawn to join points marking a transition between a steep and flat portion of the watercourse bed area (two or more such features would define the watercourse bottom, along with bank features and a thalweg or geometric centerline). |

Data Layer Specification – Water Feature Area

This Data Layer Specification (DLS) defines geospatial data specifications for the WaterFeature_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

Represents linear waterways as polygons when the features are large enough that both banks should be shown. This feature includes rivers, streams, and creeks that are managed by Natural Resources. If the feature is managed by Civil Engineering, it should not be included here and placed in the appropriate data layer.

Data Layer Details

| | |
|--|---|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | WaterFeature_A |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalNaturalResources |
| Previous Layer Names: | canal_area carolina_bay_area channel_area grassy_waterway_area low_water_area surface_water_course_area water_rapids_area water_turbulence_area WaterFeature |
| Geometry Type: | Polygon |
| Data Steward Organization (Program Area): | Program Area: Natural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Natural Resources Program SME |
| Representation: | <ul style="list-style-type: none">• Water feature areas are represented as closed polygons depicting the outermost extent of the area.• Each individual water feature is represented by a single area feature. |

Implementing Authorities and Regulations

| | |
|---------------------------------|---|
| Implementing Program(s): | Driver(s): |
| HQ AF/A7CAN | <ul style="list-style-type: none">• AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007• AFI32-7062, Comprehensive Planning, 27 June 2013 |

| Implementing Program(s): | Driver(s): |

| | <ul style="list-style-type: none"> • AFI32-7064, Integrated Natural Resources Management, 18 November 2014 • AFI32-7065, Cultural Resources Management Program, 19 November 2014 • AFH32-9007, Managing Air Force Real Property, 1 May 1999 • AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 • EO 11988, Floodplain Management |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must not overlap. |
| WaterFeature_A must not overlap with WaterBody_A. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: publicly available data from the U.S. Geological Survey National Hydrography Dataset, planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Data Layer Specification – Water Feature Area

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the WaterFeature_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the WaterFeature_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|---|--------------------|----------|
| | waterFeatureIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Water Feature. | String (80) | SDSFIE |

Data Layer Specification – Water Feature Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|--|--------------------|----------|
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Water Feature that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | hydrocode | Permanent unique public identifier for the feature (e.g., USGS code or similar). | | String (40) | SDSFIE |
| D | permCode | A code indicating the degree of permanence of the feature. | For the list of domain values see PermCode in Appendix 1. | String (15) | SDSFIE |

Data Layer Specification – Water Feature Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| D | streamType | A descriptor of the stream or river type. | For the list of domain values see StreamType in Appendix 1. | String (15) | AF |
| D | govMgt | The government that manages the river or stream designated for protection by state/federal/local authority (e.g. wild and scenic river). | For the list of domain values see GovMgt in Appendix 1. | String (10) | AF |
| D | isArtificial | Indicates whether the feature was artificially constructed. | NA, no, TBD, yes | String (3) | AF |
| D | isCanals | Indicates whether the feature is lined on one or both sides with canals. | NA, no, TBD, yes | String (3) | AF |
| D | isTidal | Indicates whether the feature is tidal. | NA, no, TBD, yes | String (3) | AF |
| D | salinityType | The salinity category of the feature. Haline refers to coastal waters and saline refers to inland waters. | For the list of domain values see SalinityType in Appendix 1. | String (20) | AF |
| | salinity | The total quantity of dissolved salts in water, measured by weight; 1 Practical Salinity Unit (PSU) = 1 Parts Per Thousand (PPT). | | String (50) | AF |
| D | isAcidic | Indicates whether the feature is acidic. | NA, no, TBD, yes | String (3) | AF |
| D | isAlkaline | Indicates whether the feature is alkaline. | NA, no, TBD, yes | String (3) | AF |
| D | nutrientClass | A descriptor of the nutrient class of the feature. | For a list of domain values, see NutrientClass in Appendix 1. | String (12) | AF |

Data Layer Specification – Water Feature Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | bedBottom | A descriptor of the bed lining of the bottom of the feature. | For a list of domain values, see BedMaterial in Appendix 1. | String (15) | AF |
| D | bedLeftBank | A descriptor of the bed lining of the left bank of the water feature, looking down the flow of water. | For a list of domain values, see BedMaterial in Appendix 1. | String (15) | AF |
| D | bedRightBank | A descriptor of the bed lining of the right bank of the water feature, looking down the flow of water. | For a list of domain values, see BedMaterial in Appendix 1. | String (15) | AF |
| | gradBottom | The slope or gradient of the bottom of the feature as percent slope. | | Double | AF |
| | gradLeftBank | The slope or gradient of the left bank of the feature, looking down the flow of water, as percent slope. | | Double | AF |
| | gradRightBank | The slope or gradient of the right bank of the feature, looking down the flow of water, as percent slope. | | Double | AF |
| D | gradientUOM | The unit of measure for the gradient. | percentSlope | String (25) | AF |
| | discharge | Discharge of river in cubic feet per second. | | Double | AF |
| D | dischargeUOM | The unit of measure for the discharge of the river. | cubicFootPerSecond | String (45) | AF |
| | velocityMax | The maximum velocity, in feet per second, of the flow of water. | | Double | AF |
| | velocityMean | The mean velocity, in feet per second, of the flow of water. | | Double | AF |

Data Layer Specification – Water Feature Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|---|--------------------|----------|
| D | velocityUOM | The unit of measure for the velocity. | footPerSecond | String (45) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |

Data Layer Specification – Water Feature Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |

Data Layer Specification – Water Feature Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for WaterFeature_A is:

| Table Name | Identifier | Source |
|-------------------|------------------|----------------------|
| nr_WaterFeature_A | waterFeatureIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Natural Resources, Water Feature

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: BedMaterial | |
|--|---|
| ATTRIBUTE NAME: bedBottom, bedLeftBank, bedRightBank | |
| CODED DOMAIN | DEFINITION |
| aquaticWeed | The bed or bank material consists of aquatic weed. |
| cementedStone | The bed or bank material consists of cemented stones. |
| clay | The bed or bank material consists of clay. |
| concreteLined | The bed or bank is concrete lined. |
| crSandGravel | The bed or bank material consists of coarse sand and gravel. |
| exposedRock | The bed or bank is exposed rock. |
| fineSand | The bed or bank material consists of fine sand. |
| grassed | The bed or bank is grass. |
| gravelStone | The bed or bank material consists of gravel to larger stone. |
| NA | Not Applicable: No value exists. |
| organicMud | The bed or bank material consists of organic mud. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| placedStone | The bed or bank is placed stone. |
| sand | The bed or bank material consists of sand. |
| siltSand | The bed or bank material consists of silty sand. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| underbrush | The bed or bank is underbrush. |
| unknown | The bed or bank material is unknown. |

| DOMAIN TABLE NAME: GovMgt | |
|---------------------------|---|
| ATTRIBUTE NAME: govMgt | |
| CODED DOMAIN | DEFINITION |
| city | City Government |
| county | County Government |
| federal | Federal Government |
| local | Local |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| state | State Government |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: GradientUOM | |
|--------------------------------|--|
| ATTRIBUTE NAME: gradientUOM | |
| CODED DOMAIN | DEFINITION |
| degrees | Degrees. |
| eastToWest | East to West. |
| grades | Grades. |
| microradians | Microradians. |
| milliradians | Milliradians. |
| minAngle | A unit of angular measure equal to one sixtieth of a degree or 60 seconds. |
| NA | Not Applicable: No value exists. |
| northeastToSouthwest | Northeast to Southwest. |
| northToSouth | North to South. |

Data Layer Specification – Water Feature Area

| DOMAIN TABLE NAME: GradientUOM | |
|--------------------------------|---|
| ATTRIBUTE NAME: gradientUOM | |
| northwestToSoutheast | Northwest to Southeast. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| percentSlope | Percent slope. |
| quadrant | Quadrant. |
| radians | Radians. |
| rotation | Rotation. |
| secAngle | A unit of angular measure equal to one sixtieth of a minute of an arc. |
| southeastToNorthwest | Southeast to Northwest. |
| southToNorth | South to North. |
| southwestToNortheast | Southwest to Northeast. |
| steradians | Steradians. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| westToEast | West to East. |

| DOMAIN TABLE NAME: NutrientClass | |
|----------------------------------|---|
| ATTRIBUTE NAME: nutrientClass | |
| CODED DOMAIN | DEFINITION |
| eutrophic | Eutrophic (High Nutrient, Low Oxygen) |
| mesotrophic | Mesotrophic (Medium Nutrient And Oxygen) |
| NA | Not Applicable: No value exists. |
| oligotrophic | Oligotrophic (Low Nutrient, High Oxygen) |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The nutrient class is unknown. |

| DOMAIN TABLE NAME: PermCode | |
|-----------------------------|--|
| ATTRIBUTE NAME: permCode | |
| CODED DOMAIN | DEFINITION |
| dry | Almost never contains water and if so, it is as a direct result of local storms. |
| intermittent | Contains or does not contain water based on climatic conditions. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| permanent | Contains water except under extreme circumstances. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: SalinityType | |
|---------------------------------|--|
| ATTRIBUTE NAME: salinityType | |
| CODED DOMAIN | DEFINITION |
| euhaline | Euhaline – Water with a concentration of ocean-derived salts measuring 30.0-40 ppt. |
| eusaline | Eusaline – Water with a concentration of land-derived salts measuring 30.0-40 ppt. |
| fresh | Freshwater – Water with a dissolved salt concentration measuring <0.5 ppt. |
| hyperhaline | Hyperhaline – Water with a concentration of ocean-derived salts measuring >40 ppt. |
| hypersaline | Hypersaline – Water with a concentration of land-derived salts measuring >40 ppt. |
| mesohaline | Mesohaline – Water with a concentration of ocean-derived salts measuring 5.0-18 ppt. |
| mesosaline | Mesosaline – Water with a concentration of land-derived salts measuring 5.0-18 ppt. |
| mixohaline | Mixohaline – Water with a concentration of ocean-derived salts measuring 0.5-30 ppt. The term is roughly equivalent to the term brackish. |

Data Layer Specification – Water Feature Area

| DOMAIN TABLE NAME: SalinityType | |
|---------------------------------|---|
| ATTRIBUTE NAME: salinityType | |
| mixosaline | Mixosaline – Water with a concentration of land-derived salts measuring 0.5-30 ppt. |
| NA | Not Applicable: No value exists. |
| oligohaline | Oligohaline – Water with a concentration of ocean-derived salts measuring 0.5-5 ppt. |
| oligosaline | Oligosaline – Water with a concentration of land-derived salts measuring 0.5-5 ppt. |
| polyhaline | Polyhaline – Water with a concentration of ocean-derived salts measuring 18.0-30 ppt. |
| polysaline | Polysaline – Water with a concentration of land-derived salts measuring 18.0-30 ppt. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

| DOMAIN TABLE NAME: StreamType | |
|-------------------------------|---|
| ATTRIBUTE NAME: streamType | |
| CODED DOMAIN | DEFINITION |
| canal | A canal is an artificial waterway for navigation or irrigating land. |
| channelized | The feature represents a river or stream that has been channelized. |
| culvert | A culvert is a structure used to channel water underneath a roadway or other feature. |
| flume | A flume is an inclined channel for carrying water. |
| NA | Not Applicable: No value exists. |
| natural | The feature represents a river or stream course that is naturally occurring. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| scenicRiver | The feature represents a scenic river or stream. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| wildRiver | The feature represents a wild river or stream. |

The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: publicly available data from the U.S. Geological Survey National Hydrography Dataset, planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the WaterFeature_P layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The

Data Layer Specification – Water Feature Point

horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the WaterFeature_P data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|--|--------------------|----------|
| | waterFeatPointIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Water Feature. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Water Feature that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | latitude | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |

Data Layer Specification – Water Feature Point

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|---|--------------------|----------|
| | MGRS | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | hydroCode | Permanent unique public identifier for the feature (e.g., USGS code or similar). | | String (40) | AF |
| D | hydroFeatType | The type of hydrographic feature. | For the list of domain values see HydroFeatType in Appendix 1. | String (15) | AF |
| D | permCode | A code indicating the degree of permanence of the feature. | For the list of domain values see PermCode in Appendix 1. | String (15) | AF |
| D | salinityType | The salinity category of the feature. Haline refers to coastal waters and saline refers to inland waters. | For the list of domain values see SalinityType in Appendix 1. | String (20) | AF |
| | salinity | The total quantity of dissolved salts in water, measured by weight; 1 Practical Salinity Unit (PSU) = 1 Parts Per Thousand (PPT). | | String (50) | AF |
| D | isAcidic | Indicates whether the feature is acidic. | NA, no, TBD, yes | String (3) | AF |
| D | isAlkaline | Indicates whether the feature is alkaline. | NA, no, TBD, yes | String (3) | AF |
| D | nutrientClass | A descriptor of the nutrient class of the feature. | For the list of domain values see NutrientClass in Appendix 1. | String (12) | AF |

Data Layer Specification – Water Feature Point

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|---|--------------------|----------|
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |

Data Layer Specification – Water Feature Point

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |

Data Layer Specification – Water Feature Point

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute

Data Layer Specification – Water Feature Point

table and business table. Additional attributes to be determined by the Program Area Manager. The business table for WaterFeature_P is:

| Table Name | Identifier | Source |
|-------------------|--------------------|----------------------|
| nr_WaterFeature_P | waterFeatPointIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Natural Resources, Water Feature

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: HydroFeatType | |
|----------------------------------|--|
| ATTRIBUTE NAME: hydroFeatType | |
| CODED DOMAIN | DEFINITION |
| damWeir | A barrier constructed to control the flow, or raise the level, of water. |
| gagingStation | A structure used to measure the characteristics of a hydrographic feature. |
| gate | A structure that may be swung, drawn, or lowered, to block an entrance or passageway. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| rapids | An area of swift current in a stream or river characterized by standing waves, boulders, or rocks. |
| rise | The place at which a stream reappears at the surface in a karst area. |
| rockAbovewater | An in-stream rock that is visible above the water surface. |
| rockUnderwater | An in-stream rock that is not visible above the water surface. |
| sink | The place at which a stream disappears underground in a karst area. |
| springSeep | A place where water issues from the ground naturally. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| waterfall | A vertical or near vertical descent of water over a step or ledge in the bed of a river. |
| waterIntake | A structure through which water enters a conduit. |
| waterOutflow | A structure through which water exits a conduit. |
| well | A pit or hole, dug or bored into the earth for the extraction of water. |

| DOMAIN TABLE NAME: NutrientClass | |
|----------------------------------|---|
| ATTRIBUTE NAME: nutrientClass | |
| CODED DOMAIN | DEFINITION |
| eutrophic | Eutrophic (High Nutrient, Low Oxygen) |
| mesotrophic | Mesotrophic (Medium Nutrient And Oxygen) |
| NA | Not Applicable: No value exists. |
| oligotrophic | Oligotrophic (Low Nutrient, High Oxygen) |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The nutrient class is unknown. |

| DOMAIN TABLE NAME: PermCode | |
|-----------------------------|--|
| ATTRIBUTE NAME: permCode | |
| CODED DOMAIN | DEFINITION |
| dry | Almost never contains water and if so, it is as a direct result of local storms. |
| intermittent | Contains or does not contain water based on climatic conditions. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| permanent | Contains water except under extreme circumstances. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

Data Layer Specification – Water Feature Point

| DOMAIN TABLE NAME: SalinityType | |
|---------------------------------|---|
| ATTRIBUTE NAME: salinityType | |
| CODED DOMAIN | DEFINITION |
| euhaline | Euhaline – Water with a concentration of ocean-derived salts measuring 30.0-40 ppt. |
| eusaline | Eusaline – Water with a concentration of land-derived salts measuring 30.0-40 ppt. |
| fresh | Freshwater – Water with a dissolved salt concentration measuring <0.5 ppt. |
| hyperhaline | Hyperhaline – Water with a concentration of ocean-derived salts measuring >40 ppt. |
| hypersaline | Hypersaline – Water with a concentration of land-derived salts measuring >40 ppt. |
| mesohaline | Mesohaline – Water with a concentration of ocean-derived salts measuring 5.0-18 ppt. |
| mesosaline | Mesosaline – Water with a concentration of land-derived salts measuring 5.0-18 ppt. |
| mixohaline | Mixohaline – Water with a concentration of ocean-derived salts measuring 0.5-30 ppt. The term is roughly equivalent to the term brackish. |
| mixosaline | Mixosaline – Water with a concentration of land-derived salts measuring 0.5-30 ppt. |
| NA | Not Applicable: No value exists. |
| oligohaline | Oligohaline – Water with a concentration of ocean-derived salts measuring 0.5-5 ppt. |
| oligosaline | Oligosaline – Water with a concentration of land-derived salts measuring 0.5-5 ppt. |
| polyhaline | Polyhaline – Water with a concentration of ocean-derived salts measuring 18.0-30 ppt. |
| polysaline | Polysaline – Water with a concentration of land-derived salts measuring 18.0-30 ppt. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

Data Layer Specification – Watershed

This Data Layer Specification (DLS) defines geospatial data specifications for the Watershed_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

The land area that drains water to a particular stream, river, or lake. It is a land feature that can be identified by tracing a line along the highest elevations between two areas on a map, often a ridge. Large watersheds, like the Mississippi River basin, contain thousands of smaller watersheds.

Data Layer Details

| | |
|--|---|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | Watershed_A |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalNaturalResources |
| Previous Layer Names: | watershed_area AdministrativeBoundary |
| Geometry Type: | Polygon |
| Data Steward Organization (Program Area): | Program Area: Natural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Natural Resources Program SME |
| Representation: | <ul style="list-style-type: none">• Watershed areas are represented as closed polygons depicting the outermost extent of the watershed.• Each individual watershed area is represented by a single area feature. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|---------------------------------|--|
| HQ AF/A7CAN | <ul style="list-style-type: none">• AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007• AFI32-7061, The Environmental Impact Analysis Process, 12 March 2003• AFI32-7062, Comprehensive Planning, 27 June 2013• AFI32-7064, Integrated Natural Resources Management, 18 November 2014• AFI32-7065, Cultural Resources Management Program, 19 November 2014• AFH32-9007, Managing Air Force Real Property, 1 May 1999• AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 |

|--------------------------|---|
| | <ul style="list-style-type: none"> • Clean Water Act, 1977 • EO 12372, Intergovernmental review of Federal Programs, 14 July 1982 • EO 11990, Protection of Wetlands, 24 May 1977 • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 • Sikes Act (16 USC 670a-670f, November 1997) |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must not overlap. |
| Polygons must not have gaps. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: publicly available data from the U.S. Geological Survey National Hydrography Dataset or Watershed Boundary Dataset, planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **12 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the Watershed_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the Watershed_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|--|--------------------|----------|
| | watershedIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Watershed. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Watershed that is not already included in the attribute table. | String (255) | SDSFIE |

Data Layer Specification – Watershed

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|--|--------------------|----------|
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | hydroUnitCode | The hydrologic unit code obtained from the USGS Watershed Boundary Dataset. | | String (15) | AF |
| D | hydroUnitLevel | The level of the hydrologic unit as it relates to the USGS Watershed Boundary Dataset hierarchy. | For a list of domain values, see HydrologicUnitLevel in Appendix 1. | String (15) | AF |
| D | nutrientClass | A descriptor of the nutrient class of the feature. | For a list of domain values, see NutrientClass in Appendix 1. | String (12) | AF |

Data Layer Specification – Watershed

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|---|--------------------|----------|
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |

Data Layer Specification – Watershed

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |

Data Layer Specification – Watershed

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for Watershed_A is:

| Table Name | Identifier | Source |
|--------------|---------------|----------------------|
| nr_Watershed | watershedIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer’s extent will include all watersheds that cross the installation, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Natural Resources, Watershed

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: HydrologicUnitLevel | |
|--|---|
| ATTRIBUTE NAME: hydrologicUnitLevel | |
| CODED DOMAIN | DEFINITION |
| basin | The basin represents the third level of the hierarchy. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| region | The region represents the first and highest level of the hierarchy. |
| subbasin | The subbasin represents the fourth level of the hierarchy. |
| subregion | The subregion represents the second level of the hierarchy. |
| subwatershed | The subwatershed represents the sixth level of the hierarchy. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| watershed | The watershed represents the fifth level of the hierarchy. |

| DOMAIN TABLE NAME: NutrientClass | |
|----------------------------------|---|
| ATTRIBUTE NAME: nutrientClass | |
| CODED DOMAIN | DEFINITION |
| eutrophic | Eutrophic (High Nutrient, Low Oxygen) |
| mesotrophic | Mesotrophic (Medium Nutrient And Oxygen) |
| NA | Not Applicable: No value exists. |
| oligotrophic | Oligotrophic (Low Nutrient, High Oxygen) |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The nutrient class is unknown. |

**Data Layer Specifications for:
Wetland**

**United States Air Force
Environmental GIS Program**

Revision History

| Date: | Version: | Description of Revision: |
|------------|------------------|--|
| 12/12/2016 | Wetland_20161212 | <ul style="list-style-type: none"> Removed “the vertical datum shall be Mean Sea Level (MSL_Height),” from the Coordinate System section. |
| 6/23/2016 | Wetland_20160623 | <ul style="list-style-type: none"> Added Wetland_P representation under “Data Layer Details” section. Updated “Positional Accuracy” section. |
| 3/9/2017 | Wetland_20170310 | <ul style="list-style-type: none"> Updated all Air Force Standard attribute fields to match August 6, 2015 GeoBase Data Dictionary. Updated “Positional Accuracy” section. Updated “For Empty Text Values” subsection. Updated the “Representation” subsection of the “Data Layer Details” section. Updated the “Point Features” subsection of the “Geometry/Topology” section. |
| 6/8/2017 | Wetland_20170608 | <ul style="list-style-type: none"> Updated the data layer update frequency in the “Sources and Source Selection” section. Updated “Data Steward POC” |
| 3/1/2018 | Wetland_20180301 | <ul style="list-style-type: none"> Updated Data Layer Details, Geometry/Topology, Sources and Source Selection, Positional Accuracy, and Attributes sections. Updated domain tables in Appendix 1. |

Data Layer Specification – Wetland

This Data Layer Specification (DLS) defines geospatial data specifications for the Wetland_A, Wetland_L, and Wetland_P data layers implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

Land consisting of marshes or swamps; saturated land. This layer consists of both jurisdictional and non-jurisdictional wetlands. Open bodies of water that are classified as jurisdictional wetlands by the U.S. Army Corps of Engineers are included in this layer.

Data Layer Details

| | |
|--|---|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | Wetland_A Wetland_L Wetland_P |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalNaturalResources |
| Previous Layer Names: | wetland_area wetland_centerline Wetland |
| Geometry Type: | Polygon, Line, Point |
| Data Steward Organization (Program Area): | Program Area: Natural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Natural Resources Program SME |
| Representation: | <ul style="list-style-type: none">• All wetland locations shall represent the latitude, longitude location of an identified wetland area.• Wetland areas are represented as closed polygons depicting the outermost extent of the area.• Each individual wetland area is represented by a single area feature.• Wetland locations will be represented as a continuous unbroken line.• All points developed from areas shall represent the centroid of the wetland area. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|---------------------------------|---|
| HQ AF/A7CAN | <ul style="list-style-type: none">• AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007• AFI32-7061, The Environmental Impact Analysis Process, 12 March 2003 |

| Implementing Program(s): | Driver(s): |

| | <ul style="list-style-type: none"> • AFI32-7062, Comprehensive Planning, 27 June 2013 • AFI32-7064, Integrated Natural Resources Management, 18 November 2014 • AFI32-7065, Cultural Resources Management Program, 19 November 2014 • AFH32-9007, Managing Air Force Real Property, 1 May 1999 • AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • Clean Water Act, 1977 • EO 12372, Intergovernmental review of Federal Programs, 14 July 1982 • EO 11990, Protection of Wetlands, 24 May 1977 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 • 40 Code of Federal Regulation 110.2 Wetland |

Geometry/Topology

| |
|--|
| Polygon Features: |
| Polygons must not overlap. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |
| Line Features: |
| Lines must not overlap. |
| Lines must not intersect. |
| Lines must not have dangles. |
| Lines must not self-overlap. |
| Lines must not self-intersect. |
| Lines must be single part features. |
| Lines must be larger than cluster tolerance (.001 meter). |
| Point Features: |
| Points must be disjoint. |
| If a point represents a polygon feature, then the point must fall properly inside of the coinciding polygon. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data

Data Layer Specification – Wetland

layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: publicly available data from the U.S. Fish and Wildlife Service National Wetlands Inventory, planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **3 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the Wetland_A, Wetland_L, and Wetland_P layers will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the Wetland_A, Wetland_L, and Wetland_P data layers.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--|--|--|--------------------|----------|
| | wetlandIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | The common name for the Wetland site. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Wetland that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize (Polygon geometry) | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM (Polygon geometry) | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize (Polygon geometry) | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| D | perimeterSizeUOM (Polygon geometry) | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude (Polygon geometry) | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |

Data Layer Specification – Wetland

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|----------------------------------|--------------------|----------|
| | longitude <i>(Polygon geometry)</i> | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid <i>(Polygon geometry)</i> | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | lengthSize <i>(Line geometry)</i> | The value of the measured length. | Recorded to the 1/1000 of a foot | Double | AF |
| D | lengthSizeUOM <i>(Line geometry)</i> | The unit of measure for the calculated length. | foot | String (25) | AF |
| | latitudeFrom <i>(Line geometry)</i> | The latitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | latitudeTo <i>(Line geometry)</i> | The latitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | longitudeFrom <i>(Line geometry)</i> | The longitude coordinate of the beginning (upstream/up gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |

Data Layer Specification – Wetland

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|---|-----------------|--------------------|----------|
| | longitudeTo <i>(Line geometry)</i> | The longitude coordinate of the ending (downstream/down gradient) coordinate point in decimal degrees. | decimal degrees | Double | AF |
| | elevationFrom <i>(Line geometry)</i> | The elevation component of the beginning (upstream/upgradient) coordinate point in feet. | | Double | AF |
| | elevationTo <i>(Line geometry)</i> | The elevation component of the ending (downstream/down gradient) coordinate point in feet. | | Double | AF |
| D | elevationUOM <i>(Line geometry)</i> | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | latitude <i>(Point geometry)</i> | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude <i>(Point geometry)</i> | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | MGRS <i>(Point geometry)</i> | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation <i>(Point geometry)</i> | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM <i>(Point geometry)</i> | The unit of measure for elevation dimension. | foot | String (25) | AF |

Data Layer Specification – Wetland

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|-----------------------|--|--|--------------------|----------|
| | regulatoryActionIDFK | Foreign Key ID to the parent regulatory action. | | String (38) | SDSFIE |
| | localName | Locally known waterway name (the name of the site should be stored in the sdsFeatureName attribute). | | String (255) | SDSFIE |
| D | cowardin | Wetlands classification according to the Cowardin System. | For a list of domain values, see CowardinType in Appendix 1. | String (10) | SDSFIE |
| D | wetlandDescriptor | A descriptor of how the wetland is depicted graphically. | For a list of domain values, see WetlandDescriptor in Appendix 1. | String (15) | AF |
| D | statusCOE | Status of the wetland under the US Army Corps of Engineers jurisdiction. | For a list of domain values, see StatueCOE in Appendix 1. | String (20) | AF |
| | statusCOEDate | The date the COE status was determined. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| D | jurisdictionalFeature | The jurisdictional feature type of the wetland. | For a list of domain values, see JurisdictionalFeature in Appendix 1. | String (10) | SDSFIE |
| D | hydrogeomorphology | The hydrogeomorphology of the wetland. | For a list of domain values, see Hydrogeomorphology in Appendix 1. | String (16) | SDSFIE |
| D | wtrRegimeCOE | Water regime as described by the US Army Corps of Engineers. | For a list of domain values, see WtrRegimeCOE in Appendix 1. | String (15) | AF |
| | mgtAgreement | A narrative field that describes the special management agreements. | | String (255) | AF |

Data Layer Specification – Wetland

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| | mgtDescription | Any description of the management practices associated with the wetland. | | String (255) | AF |
| D | nutrientClass | A descriptor of the nutrient class of the feature. | For a list of domain values, see NutrientClass in Appendix 1. | String (12) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |

Data Layer Specification – Wetland

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|--|--|--------------------|----------|
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |

Data Layer Specification – Wetland

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPES geolocator code. | | String (4) | AF |

Data Layer Specification – Wetland

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--|-----------------------|----------------|--------------------|----------|
| | SHAPE_Length <i>(Polygon and Line geometry)</i> | ESRI-generated field. | | | ESRI |
| | SHAPE_Area <i>(Polygon geometry)</i> | ESRI-generated field. | | | ESRI |

Business Tables

The business tables will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business tables for Wetland_A, Wetland_L, and Wetland_P are:

| Table Name | Identifier | Source |
|--------------|-------------|----------------------|
| nr_Wetland_A | wetlandIDFK | Program Area Manager |
| nr_Wetland_L | wetlandIDFK | Program Area Manager |
| nr_Wetland_P | wetlandIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Data Layer Specification – Wetland

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Natural Resources, Wetland

Attribute Domain Tables

| DOMAIN TABLE NAME: CowardinType | |
|---------------------------------|--|
| ATTRIBUTE NAME: cowardin | |
| CODED DOMAIN | DEFINITION |
| E | Deepwater tidal habitats and adjacent tidal wetlands that are usually semi enclosed by land but have open, partly obstructed, or sporadic access to the open ocean, and in which ocean water is at least occasionally diluted by freshwater land runoff. |
| E1 | Subtidal, Estuarine |
| E1AB | Aquatic Bed, Subtidal, Estuarine |
| E1AB1 | Algal, Aquatic Bed, Subtidal, Estuarine |
| E1AB3 | Rooted Vascular, Aquatic Bed, Subtidal, Estuarine |
| E1AB4 | Floating Vascular, Aquatic Bed, Subtidal, Estuarine |
| E1AB5 | Unknown Submergent, Aquatic Bed, Subtidal, Estuarine |
| E1AB6 | Unknown Surface, Aquatic Bed, Subtidal, Estuarine |
| E1OW | Open Water, Subtidal, Estuarine (Used On Older Maps) |
| E1RB | Rock Bottom, Subtidal, Estuarine |
| E1RB1 | Bedrock, Rock Bottom, Subtidal, Estuarine |
| E1RB2 | Rubble, Rock Bottom, Subtidal, Estuarine |
| E1RF | Reef, Subtidal, Estuarine |
| E1RF2 | Mollusk, Reef, Subtidal, Estuarine |
| E1RF3 | Worm, Reef, Subtidal, Estuarine |
| E1UB | Unconsolidated Bottom, Subtidal, Estuarine |
| E1UB1 | Cobble-Gravel, Unconsolidated Bottom, Subtidal, Estuarine |
| E1UB2 | Sand, Unconsolidated Bottom, Subtidal, Estuarine |
| E1UB3 | Mud, Unconsolidated Bottom, Subtidal, Estuarine |
| E1UB4 | Organic, Unconsolidated Bottom, Subtidal, Estuarine |
| E2 | Intertidal, Estuarine |
| E2AB | Aquatic Bed, Intertidal, Estuarine |
| E2AB1 | Algal, Aquatic Bed, Intertidal, Estuarine |
| E2AB3 | Rooted Vascular, Aquatic Bed, Intertidal, Estuarine |
| E2AB4 | Floating Vascular, Aquatic Bed, Intertidal, Estuarine |
| E2AB5 | Unknown Submergent, Aquatic Bed, Intertidal, Estuarine |
| E2AB6 | Unknown Surface, Aquatic Bed, Intertidal, Estuarine |
| E2EM | Emergent, Intertidal, Estuarine |
| E2EM1 | Persistent, Emergent, Intertidal, Estuarine |
| E2EM2 | Nonpersistent, Emergent, Intertidal, Estuarine |
| E2FO | Forested, Intertidal, Estuarine |
| E2FO1 | Broad-Leaved Deciduous, Forested, Intertidal, Estuarine |
| E2FO2 | Needle-Leaved Deciduous, Forested, Intertidal, Estuarine |
| E2FO3 | Broad-Leaved Evergreen, Forested, Intertidal, Estuarine |
| E2FO4 | Needle-Leaved Evergreen, Forested, Intertidal, Estuarine |
| E2FO5 | Dead, Forested, Intertidal, Estuarine |
| E2FO6 | Indeterminate Deciduous, Forested, Intertidal, Estuarine |
| E2FO7 | Indeterminate Evergreen, Forested, Intertidal, Estuarine |
| E2RF | Reef, Intertidal, Estuarine |
| E2RF2 | Mollusk, Reef, Intertidal, Estuarine |
| E2RF3 | Worm, Reef, Intertidal, Estuarine |
| E2RS | Rocky Shore, Intertidal, Estuarine |
| E2RS1 | Bedrock, Rocky Shore, Intertidal, Estuarine |
| E2RS2 | Rubble, Rocky Shore, Intertidal, Estuarine |
| E2SB | Stream Bed, Intertidal, Estuarine |
| E2SB1 | Bedrock, Stream Bed, Intertidal, Estuarine |

Data Layer Specification – Wetland

| DOMAIN TABLE NAME: CowardinType | |
|---------------------------------|--|
| ATTRIBUTE NAME: cowardin | |
| E2SB2 | Rubble, Stream Bed, Intertidal, Estuarine |
| E2SB3 | Cobble-Gravel, Stream Bed, Intertidal, Estuarine |
| E2SB4 | Sand, Stream Bed, Intertidal, Estuarine |
| E2SB5 | Mud, Stream Bed, Intertidal, Estuarine |
| E2SB6 | Organic, Stream Bed, Intertidal, Estuarine |
| E2SS | Scrub-Shrub, Intertidal, Estuarine |
| E2SS1 | Broad-Leaved Deciduous, Scrub-Shrub, Intertidal, Estuarine |
| E2SS2 | Needle-Leaved Deciduous, Scrub-Shrub, Intertidal, Estuarine |
| E2SS3 | Broad-Leaved Evergreen, Scrub-Shrub, Intertidal, Estuarine |
| E2SS4 | Needle-Leaved Evergreen, Scrub-Shrub, Intertidal, Estuarine |
| E2SS5 | Dead, Scrub-Shrub, Intertidal, Estuarine |
| E2SS6 | Indeterminate Deciduous, Scrub-Shrub, Intertidal, Estuarine |
| E2SS7 | Indeterminate Evergreen, Scrub-Shrub, Intertidal, Estuarine |
| E2US | Unconsolidated Shore, Intertidal, Estuarine |
| E2US1 | Cobble, Unconsolidated Shore, Intertidal, Estuarine |
| E2US2 | Sand, Unconsolidated Shore, Intertidal, Estuarine |
| E2US3 | Mud, Unconsolidated Shore, Intertidal, Estuarine |
| E2US4 | Organic, Unconsolidated Shore, Intertidal, Estuarine |
| L | Wetlands and deepwater habitats that are 1) situated in a topographic depression or a dammed river channel AND 2) lacks trees, shrubs, persistent emergents, emergent mosses or lichens with greater than 30% areal coverage AND 3) exceeds 8 ha (20 acres). |
| L1 | Limnetic, Lacustrine |
| L1AB | Aquatic Bed, Limnetic, Lacustrine |
| L1AB1 | Algal, Aquatic Bed, Limnetic, Lacustrine |
| L1AB2 | Aquatic Moss, Aquatic Bed, Limnetic, Lacustrine |
| L1AB3 | Rooted Vascular, Aquatic Bed, Limnetic, Lacustrine |
| L1AB4 | Floating Vascular, Aquatic Bed, Limnetic, Lacustrine |
| L1AB5 | Unknown Submergent, Aquatic Bed, Limnetic, Lacustrine |
| L1AB6 | Unknown Surface, Aquatic Bed, Limnetic, Lacustrine |
| L1OW | Open Water/Unknown Bottom, Limnetic, Lacustrine (Used On Older Maps) |
| L1RB | Rock Bottom, Limnetic, Lacustrine |
| L1RB1 | Bedrock, Rock Bottom, Limnetic, Lacustrine |
| L1RB2 | Rubble, Rock Bottom, Limnetic, Lacustrine |
| L1UB | Unconsolidated Bottom, Limnetic, Lacustrine |
| L1UB1 | Cobble-Gravel, Unconsolidated Bottom, Limnetic, Lacustrine |
| L1UB2 | Sand, Unconsolidated Bottom, Limnetic, Lacustrine |
| L1UB3 | Mud, Unconsolidated Bottom, Limnetic, Lacustrine |
| L1UB4 | Organic, Unconsolidated Bottom, Limnetic, Lacustrine |
| L2 | Littoral, Lacustrine |
| L2AB | Aquatic Bed, Littoral, Lacustrine |
| L2AB1 | Algal, Aquatic Bed, Littoral, Lacustrine |
| L2AB2 | Aquatic Moss, Aquatic Bed, Littoral, Lacustrine |
| L2AB3 | Rooted Vascular, Aquatic Bed, Littoral, Lacustrine |
| L2AB4 | Floating Vascular, Aquatic Bed, Littoral, Lacustrine |
| L2AB5 | Unknown Submergent, Aquatic Bed, Littoral, Lacustrine |
| L2AB6 | Unknown Surface, Aquatic Bed, Littoral, Lacustrine |
| L2EM | Emergent, Littoral, Lacustrine |
| L2EM2 | Nonpersistent, Emergent, Littoral, Lacustrine |
| L2OW | Open Water/Unknown Bottom, Littoral, Lacustrine |
| L2RB | Rock Bottom, Littoral, Lacustrine |
| L2RB1 | Bedrock, Rock Bottom, Littoral, Lacustrine |
| L2RB2 | Rubble, Rock Bottom, Littoral, Lacustrine |

Data Layer Specification – Wetland

| DOMAIN TABLE NAME: CowardinType | |
|---------------------------------|--|
| ATTRIBUTE NAME: cowardin | |
| L2RS | Rocky Shore, Littoral, Lacustrine |
| L2RS1 | Bedrock, Rocky Shore, Littoral, Lacustrine |
| L2RS2 | Rubble, Rocky Shore, Littoral, Lacustrine |
| L2UB | Unconsolidated Bottom, Littoral, Lacustrine |
| L2UB1 | Cobble-Gravel, Unconsolidated Bottom, Littoral, Lacustrine |
| L2UB2 | Sand, Unconsolidated Bottom, Littoral, Lacustrine |
| L2UB3 | Mud, Unconsolidated Bottom, Littoral, Lacustrine |
| L2UB4 | Organic, Unconsolidated Bottom, Littoral, Lacustrine |
| L2US | Unconsolidated Shore, Littoral, Lacustrine |
| L2US1 | Cobble-Gravel, Unconsolidated Shore, Littoral, Lacustrine |

| M2US4 | Organic, Unconsolidated Shore, Intertidal, Marine |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |

Data Layer Specification – Wetland

| DOMAIN TABLE NAME: CowardinType | |
|---------------------------------|--|
| ATTRIBUTE NAME: cowardin | |
| P | Includes all nontidal wetlands dominated by trees, shrubs, persistent emergents, emergent mosses or lichens, and all such wetlands that occur in tidal areas where salinity due to ocean-derived salts is below 0.5%. |
| PAB | Aquatic Bed, Palustrine |
| PAB1 | Algal, Aquatic Bed, Palustrine |
| PAB2 | Aquatic Moss, Aquatic Bed, Palustrine |
| PAB3 | Rooted Vascular, Aquatic Bed, Palustrine |
| PAB4 | Floating Vascular, Aquatic Bed, Palustrine |
| PAB5 | Unknown Submergent, Aquatic Bed, Palustrine |
| PAB6 | Unknown Surface, Aquatic Bed, Palustrine |
| PEM | Emergent, Palustrine |
| PEM1 | Persistent, Emergent, Palustrine |
| PEM2 | Nonpersistent, Emergent, Palustrine |
| PFO | Forested, Palustrine |
| PFO1 | Broad-Leaved Deciduous, Forested, Palustrine |
| PFO2 | Needle-Leaved Deciduous, Forested, Palustrine |
| PFO3 | Broad-Leaved Evergreen, Forested, Palustrine |
| PFO4 | Needle-Leaved Evergreen, Forested, Palustrine |
| PFO5 | Dead, Forested, Palustrine |
| PFO6 | Indeterminate Deciduous, Forested, Palustrine |
| PFO7 | Indeterminate Evergreen, Forested, Palustrine |
| PML | Moss-Lichen, Palustrine |
| PML1 | Moss, Moss-Lichen, Palustrine |
| PML2 | Lichen, Moss-Lichen, Palustrine |
| POW | Palustrine, Open Water (Used On Older Maps) |
| PRB | Rock Bottom, Palustrine |
| PRB1 | Bedrock, Rock Bottom, Palustrine |
| PRB2 | Rubble, Rock Bottom, Palustrine |
| PSS | Scrub-Shrub, Palustrine |
| PSS1 | Broad-Leaved Deciduous, Scrub-Shrub, Palustrine |
| PSS2 | Needle-Leaved Deciduous, Scrub-Shrub, Palustrine |
| PSS3 | Broad-Leaved Evergreen, Scrub-Shrub, Palustrine |
| PSS4 | Needle-Leaved Evergreen, Scrub-Shrub, Palustrine |
| PSS5 | Dead, Scrub-Shrub, Palustrine |
| PSS6 | Indeterminate Deciduous, Scrub-Shrub, Palustrine |
| PSS7 | Indeterminate Evergreen, Scrub-Shrub, Palustrine |
| PUB | Unconsolidated Bottom, Palustrine |
| PUB1 | Cobble-Gravel, Unconsolidated Bottom, Palustrine |
| PUB2 | Sand, Unconsolidated Bottom, Palustrine |
| PUB3 | Mud, Unconsolidated Bottom, Palustrine |
| PUB4 | Organic, Unconsolidated Bottom, Palustrine |
| PUS | Unconsolidated Shore, Palustrine |
| PUS1 | Cobble-Gravel, Unconsolidated Shore, Palustrine |
| PUS2 | Sand, Unconsolidated Shore, Palustrine |
| PUS3 | Mud, Unconsolidated Shore, Palustrine |
| PUS4 | Organic, Unconsolidated Shore, Palustrine |
| PUS5 | Vegetated, Unconsolidated Shore, Palustrine |
| R | Wetlands and deepwater habitats contained within a channel, with two exceptions: (1) wetlands dominated by trees, shrubs, persistent emergents, emergent mosses, or lichens, and (2) habitats with water containing ocean-derived salts in excess of 0.5%. |
| R1 | Tidal, Riverine |
| R1AB | Aquatic Bed, Tidal, Riverine |
| R1AB1 | Algal, Aquatic Bed, Tidal, Riverine |

Data Layer Specification – Wetland

| R5UB4 | Organic, Unconsolidated Bottom, Unknown Perennial, Riverine |
| RP | Riparian - Plant communities contiguous to and affected by surface and subsurface hydrologic features of perennial or intermittent lotic and lentic water bodies (rivers, streams, lakes, or drainage ways). |
| RP1 | Lotic, Riparian |
| RP1EM | Emergent, Lotic, Riparian |

Data Layer Specification – Wetland

| DOMAIN TABLE NAME: CowardinType | |
|---------------------------------|---|
| ATTRIBUTE NAME: cowardin | |
| RP1FO | Forested, Lotic, Riparian |
| RP1FO5 | Dead, Forested, Lotic, Riparian |
| RP1FO6 | Deciduous, Forested, Lotic, Riparian |
| RP1FO7 | Evergreen, Forested, Lotic, Riparian |
| RP1FO8 | Mixed, Forested, Lotic, Riparian |
| RP1SS | Scrub-Shrub, Lotic, Riparian |
| RP1SS5 | Dead, Scrub-Shrub, Lotic, Riparian |
| RP1SS6 | Deciduous, Scrub-Shrub, Lotic, Riparian |
| RP1SS7 | Evergreen, Scrub-Shrub, Lotic, Riparian |
| RP1SS8 | Mixed, Scrub-Shrub, Lotic, Riparian |
| RP2 | Lentic, Riparian |
| RP2EM | Emergent, Lentic, Riparian |
| RP2FO | Forested, Lentic Riparian |
| RP2FO5 | Dead, Forested, Lentic, Riparian |
| RP2FO6 | Deciduous, Forested, Lentic, Riparian |
| RP2FO7 | Evergreen, Forested, Lentic, Riparian |
| RP2FO8 | Mixed, Forested, Lentic, Riparian |
| RP2SS | Scrub-Shrub, Lentic, Riparian |
| RP2SS5 | Dead, Scrub-Shrub, Lentic, Riparian |
| RP2SS6 | Deciduous, Scrub-Shrub, Lentic, Riparian |
| RP2SS7 | Evergreen, Scrub-Shrub, Lentic, Riparian |
| RP2SS8 | Mixed, Scrub-Shrub, Lentic, Riparian |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| U | Upland - Not A Wetland Or Deepwater Habitat Of The United States As Described By Cowardin |

| DOMAIN TABLE NAME: Hydrogeomorphology | |
|---------------------------------------|--|
| ATTRIBUTE NAME: hydrogeomorphology | |
| CODED DOMAIN | DEFINITION |
| depress | Depressional is characterized by a water source consisting of return flow from groundwater and interflow with primarily vertical hydrodynamics. |
| estuarineFringe | The water source of the estuarine fringe consists of overbank flow from estuaries, with bidirectional and horizontal hydrodynamics being dominant. |
| lacustrineFringe | A Lacustrine fringe has a dominant water source of lake overbank flow, and the dominant hydrodynamics are bidirectional and horizontal. |
| mineralSoilFlats | Mineral soil flats have a water source of precipitation and vertical hydrodynamics are dominant. |
| NA | Not Applicable: No value exists. |
| organicSoilFlats | Organic soil flats have precipitation as the water source and its dominant hydrodynamic is vertical. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| riverine | Riverine is characterized by a water source of overbank flow from a channel and hydrodynamics which are predominantly unidirectional and horizontal. |
| slope | The Slope wetland class is characterized by a water source of return flow from groundwater with principally unidirectional and horizontal hydrodynamics. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

Data Layer Specification – Wetland

| DOMAIN TABLE NAME: JurisdictionalFeature | |
|--|---|
| ATTRIBUTE NAME: jurisdictionalFeature | |
| CODED DOMAIN | DEFINITION |
| delineate | Delineation only. |
| isolated | Isolated (interstate or intrastate) waters, including isolated wetlands. |
| NA | Not Applicable: No value exists. |
| nonRPW | Non-RPWs that flow directly or indirectly into TNWs. |
| nonRPWW | Wetlands adjacent to non-RPWs that flow directly or indirectly into TNWs. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| RPW | Relatively Permanent Waters (RPWs) that flow directly or indirectly into TNWs. |
| RPWWD | Wetlands directly abutting RPWs that flow directly or indirectly into TNWs. |
| RPWWN | Wetlands adjacent to but not directly abutting RPWs that flow directly or indirectly into TNWs. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| TNW | Traditional Navigable Waters (TNW), including territorial seas. |
| TNWRPW | Tributary consisting of both RPWs and non-RPWs. |
| TNWW | Wetlands adjacent to TNWs. |
| upland | Uplands. |

| DOMAIN TABLE NAME: NutrientClass | |
|----------------------------------|---|
| ATTRIBUTE NAME: nutrientClass | |
| CODED DOMAIN | DEFINITION |
| eutrophic | Eutrophic (High Nutrient, Low Oxygen) |
| mesotrophic | Mesotrophic (Medium Nutrient And Oxygen) |
| NA | Not Applicable: No value exists. |
| oligotrophic | Oligotrophic (Low Nutrient, High Oxygen) |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | The nutrient class is unknown. |

| DOMAIN TABLE NAME: StatusCOE | |
|------------------------------|--|
| ATTRIBUTE NAME: statusCOE | |
| CODED DOMAIN | DEFINITION |
| jurisdictional | Under the jurisdiction of the US Army Corps of Engineers. |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| nonJurisdictional | Meets the description of a wetland in the "1987 Corps of Engineers Wetland Delineation Manual" but is not under the jurisdiction of the USACE. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
| unknown | Unknown. |

| DOMAIN TABLE NAME: WetlandDescriptor | |
|--------------------------------------|-----------------------|
| ATTRIBUTE NAME: wetlandDescriptor | |
| CODED DOMAIN | DEFINITION |
| bogHeath | Temperate/Cold Scrub |
| mangroveSwamp | Mangrove Swamp |
| marshBrackWtr | Marsh - Brackishwater |
| marshFreshWtr | Marsh - Freshwater |

Data Layer Specification – Wetland

| DOMAIN TABLE NAME: WetlandDescriptor | |
|--------------------------------------|--|
| ATTRIBUTE NAME: wetlandDescriptor | |
| marshSaltyWtr | Marsh - Saltwater |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| swampBrackWtr | Swamp - Brackishwater |
| swampFreshWtr | Swamp - Freshwater |
| swampSaltyWtr | Swamp - Saltwater |
| TBD | To Be Determined: A value is required but the value has yet to be determined.. |
| tidalMudFlt | Tidal Mud Flats |
| tidalSltrMrsh | Tidal Saltwater Marsh |
| unknown | The wetland descriptor is unknown. |

| DOMAIN TABLE NAME: WtrRegimeCOE | |
|---------------------------------|---|
| ATTRIBUTE NAME: wtrRegimeCOE | |
| CODED DOMAIN | DEFINITION |
| irregInunSat | Irregularly Inundated/Saturated |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| regInunSat | Regularly Inundated/Saturated |
| sealInunSat | Seasonally Inundated/Saturated |
| semiPerminun | Semi-permanently/Nearly Permanently Inundated |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

**Data Layer Specifications for:
Wildland Urban Interface**

**United States Air Force
Environmental GIS Program**

Revision History

| Date: | Version: | Description of Revision: |
|------------|--------------------------------------|---|
| 12/12/2016 | WildlandUrbanInterface Area_20161212 | <ul style="list-style-type: none"> Removed “the vertical datum shall be Mean Sea Level (MSL_Height),” from the Coordinate System section. |
| 6/23/2016 | WildlandUrbanInterface Area_20160623 | <ul style="list-style-type: none"> Updated “Positional Accuracy” section. |
| 3/9/2017 | WildlandUrbanInterface Area_20170310 | <ul style="list-style-type: none"> Updated all Air Force Standard attribute fields to match August 6, 2015 GeoBase Data Dictionary. Updated “Positional Accuracy” section. Updated “For Empty Text Values” subsection. |
| 6/8/2017 | WildlandUrbanInterface Area_20170608 | <ul style="list-style-type: none"> Updated the data layer update frequency in the “Sources and Source Selection” section. Updated “Data Steward POC” |
| 3/1/2018 | WildlandUrbanInterface_20180301 | <ul style="list-style-type: none"> Updated Definition, Data Layer Details, Geometry/Topology, Sources and Source Selection, Positional Accuracy, Attributes, and Business Tables sections. Added Appendix 1 for domain table. |

Data Layer Specification – Wildland Urban Interface

This Data Layer Specification (DLS) defines geospatial data specifications for the WildlandUrbanInterface_A data layer implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

The area or zone where structures and other human development meet or intermix with undeveloped wildland or vegetative fuels. There are two main categories of communities that meet this description: Interface and Intermix Community.

Data Layer Details

| | |
|--|--|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | WildlandUrbanInterface_A |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalNaturalResources |
| Previous Layer Names: | None |
| Geometry Type: | Polygon |
| Data Steward Organization (Program Area): | Program Area: Natural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Natural Resources Program SME |
| Representation: | <ul style="list-style-type: none">• Wildland urban interface areas are represented as closed polygons depicting the outermost extent of the area.• Each individual wildland urban interface area is represented by a single area feature. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|---------------------------------|---|
| HQ AF/A7CAN | <ul style="list-style-type: none">• AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007• AFI32-7062, Comprehensive Planning, 27 June 2013• AFI32-7064, Integrated Natural Resources Management, 18 November 2014• AFI32-7065, Cultural Resources Management Program, 19 November 2014• AFH32-9007, Managing Air Force Real Property, 1 May 1999• AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996• Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 |

| Implementing Program(s): | Driver(s): |
|--------------------------|---|
| | <ul style="list-style-type: none"> • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must not overlap. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: data available from the Texas A&M Forest Service Wildfire Risk Assessment Portal or the Southern Group of State Foresters Wildfire Risk Assessment Portal, planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **12 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not applicable.

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the WildlandUrbanInterface_A layer will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the WildlandUrbanInterface_A data layer.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------------|--|--|--------------------|----------|
| | wildlandUrbanInterIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE00010000001, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Wildland Urban Interface area. | String (80) | SDSFIE |
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Wildland Urban Interface area that is not already included in attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |

Data Layer Specification – Wildland Urban Interface

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|------------------|--|--|--------------------|----------|
| | areaSizeUOM | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize | The value of the measured perimeter. | Recorded to the 1/1000 of a foot. | Double | AF |
| | perimeterSizeUOM | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| D | wuiCategory | The type of WUI category the feature represents. | For a list of domain values, see WUIcategory in Appendix 1. | String (10) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |

Data Layer Specification – Wildland Urban Interface

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard. | String (5) | AF |

Data Layer Specification – Wildland Urban Interface

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |

Data Layer Specification – Wildland Urban Interface

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|----------------|--------------------|----------|
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPEs geolocator code. | | String (4) | AF |
| | SHAPE_Length | ESRI-generated field. | | | ESRI |
| | SHAPE_Area | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business table for WildlandUrbanInterface_A is:

| Table Name | Identifier | Source |
|---------------------------|------------------------|----------------------|
| nr_WildlandUrbanInterface | wildlandUrbanInterIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

Data Layer Specification – Wildland Urban Interface

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Natural Resources, Wildland Urban Interface

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: WUIcategory | |
|--------------------------------|---|
| ATTRIBUTE NAME: wuiCategory | |
| CODED DOMAIN | DEFINITION |
| interface | The Interface Community exists where structures directly abut wildland fuels. There is a clear line of demarcation between residential, business, and public structures and wildland fuels. The development density for an interface community is usually 3 or more structures per acre, with shared municipal services. |
| intermix | The Intermix Community exists where structures are scattered throughout a wildland area. There is no clear line of demarcation; wildland fuels are continuous outside of and within the developed area. The development density in the intermix ranges from structures very close together to one structure per 40 acres. |
| NA | Not Applicable: No value exists. |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |

Environmental GIS Program**

Revision History

| Date: | Version: | Description of Revision: |
|------------|-----------------------------------|--|
| 12/12/2016 | WildlifeManagement Area_20161212 | <ul style="list-style-type: none"> Removed “the vertical datum shall be Mean Sea Level (MSL_Height),” from the Coordinate System section. |
| 6/23/2016 | WildlifeManagement Area_20160623 | <ul style="list-style-type: none"> Added WildlifeMgtArea_P representation under “Data Layer Details” section. Added WildlifeMgtArea_P topology under “Geometry/Topology” section. Updated “Positional Accuracy” section. |
| 3/9/2017 | WildlifeManagement Area_20170310 | <ul style="list-style-type: none"> Updated all Air Force Standard attribute fields to match August 6, 2015 GeoBase Data Dictionary. Updated “Positional Accuracy” section. Updated “For Empty Text Values” subsection. Updated the “Representation” subsection of the “Data Layer Details” section. Updated the “Point Features” subsection of the “Geometry/Topology” section. |
| 6/8/2017 | WildlifeManagement Area_201700608 | <ul style="list-style-type: none"> Updated the data layer update frequency in the “Sources and Source Selection” section. Updated “Data Steward POC” |
| 3/1/2018 | WildlifeManagement Area_20180301 | <ul style="list-style-type: none"> Updated Data Layer Details, Geometry/Topology, Positional Accuracy, Attributes, and Business Tables sections. Updated domain table in Appendix 1. |

Data Layer Specification – Wildlife Management Area

This Data Layer Specification (DLS) defines geospatial data specifications for the WildlifeMgtArea_A and WildlifeMgtArea_P data layers implemented under the United States Air Force Civil Engineer Center (AFCEC) Environmental GIS Program.

Definition

Areas where specific actions have been taken to manage wildlife populations such as, but not limited to: food plots, salt licks, guzzlers, government wildlife management areas (if applicable), etc.

Data Layer Details

| | |
|--|---|
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Class Name: | WildlifeMgtArea_A WildlifeMgtArea_P |
| SDSFIE 3.1.1 AF AFCEC/CZ Adaptation Feature Dataset: | environmentalNaturalResources |
| Previous Layer Names: | gov_wildlife_management_area LandManagementZone |
| Geometry Type: | Polygon, Point |
| Data Steward Organization (Program Area): | Program Area: Natural Resources |
| Data Steward POC: | AFCEC/CZTQ Air Force Natural Resources Program SME |
| Representation: | <ul style="list-style-type: none"> • Wildlife management areas are represented as closed polygons depicting the outermost extent of the area. • Each individual wildlife management area is represented by a single area feature. • All points developed from areas shall represent the centroid of wildlife management areas. |

Implementing Authorities and Regulations

| Implementing Program(s): | Driver(s): |
|---------------------------------|--|
| HQ AF/A7CAN | <ul style="list-style-type: none"> • AFI32-10112, Installation Geospatial Information and Services (IGI&S), 19 October 2007 • AFI32-7062, Comprehensive Planning, 27 June 2013 • AFI32-7064, Integrated Natural Resources Management, 18 November 2014 • AFI32-7065, Cultural Resources Management Program, 19 November 2014 • AFH32-9007, Managing Air Force Real Property, 1 May 1999 • AFI32-1084, Facility Requirements; Chapter 11-16, 1 September 1996 |

| Implementing Program(s): | Driver(s): |
|--------------------------|--|
| | <ul style="list-style-type: none"> • Garrison Mapping Concept of Operations (CONOPS) Version 2.0, 12 June 2003 • USAF Installation Geospatial Information and Services (IGI&S) Data Model, 15 December 2009 • Real Property Inventory Management (RPIM), v2.0 • RPIM 3.0, extracted 4/2009 • 10 USC 2671 • PL 86 - 337 (Hunting, Fishing, and Trapping) |

Geometry/Topology

| Polygon Features: |
|--|
| Polygons must not overlap. |
| Polygons must be single part features. |
| Polygons must be larger than cluster tolerance (.001 meter). |
| Point Features: |
| If a point represents a polygon feature, then the point must fall properly inside of the coinciding polygon. |

Sources and Source Selection

Information for this geospatial data layer must be obtained and/or validated at the installation level. The Data Steward will have overall responsibility for completing and updating the spatial, attribute and metadata features of this geospatial data layer in accordance with this DLS. The data layer will be updated on an annual (yearly) basis at a minimum. More frequent updates may be performed if new data has been developed prior to the annual update. Additionally a bi-annual (every 6 months) Quality Control (QC) check will be performed on all data housed in GeoBase. Updates and QC will be performed on any new data prior to uploading it to GeoBase.

Possible sources for the data layer are: planimetric data extracted from stereo or ortho-imagery, differential GPS survey, conventional surveys using a survey grade GPS, computer aided design (CAD), imagery, hardcopy documents, attribute or tabular data.

Positional Accuracy

Horizontal Accuracy: Data developed within this layer should be within **12 meters** of the actual location at the **95% confidence level**. Accuracy reported at the 95% confidence level means that 95% of the positions in the dataset would have an error with respect to true ground position that is equal to or smaller than the stated accuracy threshold value.

Vertical Accuracy: Not Applicable.

Data Layer Specification – Wildlife Management Area

Note: Horizontal accuracy should be recorded within the “Quality” element of the metadata. Where positional accuracy cannot be determined, this section should be populated with “Not Recorded” and a brief statement explaining why it cannot be determined should be provided.

Coordinate System

The bounding coordinates to capture the north, south, east, and west most spatial extents of the WildlifeMgtArea_A and WildlifeMgtArea_P layers will be based on the Universal Transverse Mercator (UTM) Zone, meters. Datasets within the database should have a spatial reference with a precision of 1000. The horizontal datum to be utilized for all data is World Geodetic System 1984 (WGS84), and the projection is the Universal Transverse Mercator (UTM) zone for the installation.

Attributes

The following table lists the attributes for the WildlifeMgtArea_A and WildlifeMgtArea_P data layers.

SDSFIE 3.1.1 Air Force AFCEC/CZ Adaptation Attributes

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---------------------|---|--|--------------------|----------|
| | wildlifeMgtAreaIDPK | The unique identifier for each feature in the feature class. The value should be calculated as follows: INST_SITE0001000000 1, where INST is the 4 character installation ID, SITE0001 is the 4 character 4 digit site ID, followed by a 7 digit unique number starting with 0000001. | | String (20) | AF |
| | sdsID | A unique identifier for all features and objects in the SDSFIE. | | GUID | SDSFIE |
| | sdsFeatureName | The common name of the feature. | Any common name used to describe the Wildlife Management Area. | String (80) | SDSFIE |

Data Layer Specification – Wildlife Management Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|--|---|--------------------|----------|
| | sdsFeatureDescription | A narrative describing the feature. | Any descriptive information about the Wildlife Management Area that is not already included in the attribute table. | String (255) | SDSFIE |
| | sdsMetadataID | The foreign key to a metadata record. | | String (80) | SDSFIE |
| | areaSize <i>(Polygon geometry)</i> | The value of the measured area. | Recorded to the 1/1000 of an acre. | Double | AF |
| D | areaSizeUOM <i>(Polygon geometry)</i> | The unit of measure for the area of the calculated area. | acre | String (20) | AF |
| | perimeterSize <i>(Polygon geometry)</i> | The value of the measured perimeter. | Recorded to the 1/1000 of a foot | Double | AF |
| D | perimeterSizeUOM <i>(Polygon geometry)</i> | The perimeter unit of measure. | foot | String (25) | AF |
| | latitude <i>(Polygon geometry)</i> | The latitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | longitude <i>(Polygon geometry)</i> | The longitude coordinate of the "centroid" of the polygon in decimal degrees. | decimal degrees | Double | AF |
| | MGRScentroid <i>(Polygon geometry)</i> | Military Grid Reference System for the centerpoint of the (area) critical infrastructure. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | latitude <i>(Point geometry)</i> | The latitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |
| | longitude <i>(Point geometry)</i> | The longitude coordinate in decimal degrees to sub foot precision. | decimal degrees | Double | AF |

Data Layer Specification – Wildlife Management Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---|---|--|--------------------|----------|
| | MGRS <i>(Point geometry)</i> | Military Grid Reference System for the coordinate point. MGRS is calculated from the Latitude and Longitude values. | | String (20) | AF |
| | elevation <i>(Point geometry)</i> | The elevation of the subject item in relation to a datum. | | Double | AF |
| D | elevationUOM <i>(Point geometry)</i> | The unit of measure for elevation dimension. | foot | String (25) | AF |
| | dateDesig | Date the area was designated. Format for date is YYYYMMDD (i.e., September 15, 1994 = 19940915). | | Integer (Long) | AF |
| D | mgtLevel | Discriminator. The governmental level of management for the area. | For a list of domain values, see GovMgt in Appendix 1. | String (10) | AF |
| | restriction | Any restrictions associated with the management area, including special rules or notes. | | String (240) | AF |
| | restrictPeriod | Range of dates or description of restriction period. | | String (30) | AF |
| D | installationID | Installation identifier assigned to the Installation by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (16) | AF |
| D | installationName | The actual name of the installation that is associated with the installation ID defined by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (100) | AF |

Data Layer Specification – Wildlife Management Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|--------------------------|--|--|--------------------|----------|
| D | siteID | Installation identifier assigned to the Site by real property. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (36) | AF |
| D | majorCommand | Service Major Command of the installation. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| D | realPropertySiteUniqueID | The unique identifier (UID) used to permanently identify a Site. This UID will be a Real Property Site Unique Identifier (RPSUID). Source: RPIM, v3.0, extracted 4/2009. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | wacInnrCode | The NGA World Airfield Identifier. | The NGA World Airfield Identifier Code: List of codes can be accessed at the following site: https://www.extranet.nga.mil/ | String (10) | AF |
| | dataSteward | The data steward is the entity that oversees the data content, context, and associated business rules of the feature class. | | String (20) | AF |
| D | country | The country code is an abbreviation for the country that owns the specific feature class. | For the list of domain values see ISO ALPHA-2 Code / FIPS 10-4 standard . | String (5) | AF |

Data Layer Specification – Wildlife Management Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|----------------|---|--|--------------------|----------|
| D | owner | The military service, country, government that owns that specific feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (10) | AF |
| | createDate | Date the feature was originally acquired, created or generated. If the day is unknown, default to the first day of the month. If only the year is known, default to the first day of the year. | | Date | AF |
| | creator | Person who created the feature. Last name of the person and first initial. Example: Jane Smith would be attributed as "SmithJ." | | String (30) | AF |
| D | dataCollection | Coded domain value which identifies the collection methodology used to calculate, create or record the feature. | For the list of domain values see the Air Force GeoBase Data Working Group AF Adaptation 3.1.1 Data Dictionary. | String (20) | AF |
| | dataSource | Identifies the installation office, government agency, contractor or vendor that acquired, created or generated the feature. | | String (100) | AF |
| | editor | Contractor or person that edited the feature attribution or geometry from its original or previous value. Last Name of the person and first initial. For example, Jane Smith would be attributed as SmithJ. | | String (30) | AF |

Data Layer Specification – Wildlife Management Area

| Domain (D) | Attribute Name | Definition | Allowed Values | Data Type (Length) | Advocate |
|------------|---------------------------------|---|----------------|--------------------|----------|
| | dateEdited | Date that the feature was edited from its original or previous value. | | Date | AF |
| | metaNotes | Describes other details about what was created or edited and why. | | String (255) | AF |
| | mediaLink | Used to link the record to associated multimedia records that reference data such as imagery, video, audio, scanned documents, drawings, and other digital media. | | String (255) | AF |
| | narrative | Any additional comments or notes. | | String (255) | AF |
| | GEOLOC | JOPEs geolocator code. | | String (4) | AF |
| | SHAPE_Length (Polygon geometry) | ESRI-generated field. | | | ESRI |
| | SHAPE_Area (Polygon geometry) | ESRI-generated field. | | | ESRI |

Business Tables

The business table will contain information that goes beyond the attribute table information, which will be related to the data layer using a Feature Key or other Identifier found in both the attribute table and business table. Additional attributes to be determined by the Program Area Manager. The business tables for WildlifeMgtArea_A and WildlifeMgtArea_P are:

| Table Name | Identifier | Source |
|----------------------|---------------------|----------------------|
| nr_WildlifeMgtArea_A | wildlifeMgtAreaIDFK | Program Area Manager |
| nr_WildlifeMgtArea_P | wildlifeMgtAreaIDFK | Program Area Manager |

“No Data” Value in Attributes

Directions for populating required attributes for which no data/information is available. Use the appropriate values below:

Data Layer Specification – Wildlife Management Area

| For Empty Text Values | |
|-----------------------|--|
| TBD | (To Be Determined) – A value is required but the value has yet to be determined. |
| unknown | The value cannot be reasonably determined. |
| NA | (Not Applicable) No value exists. |

| For Empty Integer Values | |
|--------------------------|--|
| 99999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 88888 | The value cannot be reasonably determined. |
| 77777 | (Not Applicable) No value exists. |

| For Empty Date Values | |
|-----------------------|--|
| 9/9/9999 | (To Be Determined) – A value is required but the value has yet to be determined. |
| 8/8/8888 | The value cannot be reasonably determined. |
| 7/7/7777 | (Not Applicable) No value exists. |

Extent

The data layer's extent will be to the installation boundary, unless otherwise noted by the program area manager.

Metadata

Complete Federal Geographic Data Committee (FGDC) compliant metadata for the data layer using the *Procedures for Creating Metadata* document. Update the metadata Lineage section as edits are made or as necessary.

Theme Keywords: Natural Resources, Wildlife Management Area

Appendix 1: SDSFIE 3.1.1 AF AFCEC/CZ Adaptation

Attribute Domain Tables

| DOMAIN TABLE NAME: GovMgt | |
|---------------------------|---|
| ATTRIBUTE NAME: mgtLevel | |
| CODED DOMAIN | DEFINITION |
| city | City Government |
| county | County Government |
| federal | Federal Government |
| local | Local |
| NA | Not Applicable: No value exists. |
| other | Other. Must be described in the sdsFeatureDescription attribute. |
| state | State Government |
| TBD | To Be Determined: A value is required but the value has yet to be determined. |
